City Region Food System Toolkit

Assessing and planning sustainable city region food systems

Tool/Example:

Stakeholder mapping and analysis NetMap method

Author(s): Eva Schiffer, independent consultant (previously International Food Policy Research Institute)

Project: n.a

Introduction to the joint programme

This tool is part of the City Region Food Systems (CRFS) toolkit to assess and plan sustainable city region food systems. The toolkit has been developed by FAO, RUAF Foundation and Wilfrid Laurier University with the financial support of the German Federal Ministry of Food and Agriculture and the Daniel and Nina Carasso Foundation.

Tool description:

The Netmap method is a tool used for stakeholder mapping and analysis. Net-Map is a participatory interview technique that combines social network analysis stakeholder mapping, and power mapping. Net-Map helps understand, visualize, discuss, and improve situations in which many different actors influence outcomes. By creating maps, individuals and groups clarify their own view of the present food situation in the city, foster discussion, and help participants develop a 'personalised' broader perspective of the food system and the stakeholders involved.
