ANNEX 5: RESULTS FRAMEWORK - MTP 2014-17 / PWB 2014-15

1. This Annex provides the updated results framework for FAO's Medium Term Plan 2014-17 and Programme of Work and Budget 2014-15 to implement the reviewed Strategic Framework: the five Strategic Objectives and Objective 6; and the four Functional Objectives and three special Chapters as listed below. The results framework guides the planning of FAO's work and will provide the basis for monitoring and evaluation, as set out in Section III of the Adjustments to the PWB 2014-15. The results framework will evolve as it is further embedded into FAO's planning and monitoring processes and we will reflect lessons from its implementation in future revisions, as necessary. The results framework comprises:

- a) Strategic Objectives with indicators, Outcomes with indicators, baselines and targets (twoand four-year), and Outputs (in a separate *Annex* 6) with preliminary indicators;
- b) for Objective 6, the Functional Objectives and special Chapters, Outcomes with key performance indicators and targets (two- and four-year), and Outputs.

2. The determination of Outcome level baselines and targets and some key performance indicators is work in progress. The Programme Committee at its 114th Session (11-15 November) "in recalling the need for clear definition of indicators, and for coherence between outcomes and indicators, requested a note outlining further details of the process and methodology for developing indicators be presented to the 148th session of the Council, as part of an update to Annex 5 of document CL 148/3".

3. This revision to Annex 5 provides the information requested by the Programme Committee, as well as updates to the results frameworks to reflect the most recent information available.

Outcome level monitoring and evaluation methodology

4. Organizational Outcomes reflect changes in the country level and/or global enabling environment needed to foster the achievement of higher level Strategic Objectives. They relate to those issues at country or international level – in areas within FAO's mandate and core functions – which could impede progress, including for example: relevance of policy and programming frameworks, level of resources and investments committed, level and capacity of coordination/partnerships, and capacity for availability and use of information for decision-making.

5. Indicators at this level measure the extent to which countries have made the necessary reforms and established the required capacities to achieve the strategic objectives, in the areas where FAO contributes; or the extent to which the international community has made progress on improving the global enabling environment framework, for example through the development of policy frameworks, norms, standards and agreements.

6. Outcome-level indicators are clustered into the main determinants of success, for example: relevance of policy and programming frameworks; level of resources and investments committed; level of coordination/partnerships established; and availability/use of information and data for decision making.

7. Each Outcome-level indicator is measured through a number of sub-indicators or 'elements of measure'. For example: for Strategic Objective 1, Outcome 1, indicator A: 'percent of countries with improved governance and coordination mechanisms for eradicating hunger, food insecurity and malnutrition', the changes in the set of policies, institutions and interventions are measured through the following four elements:

- a) Existence of high-level inter-ministerial food security and nutrition mechanism
- b) Existence of accountability mechanism (1 qualifier)
- c) Existence of well-functioning governmental coordination mechanisms to address food security and nutrition (4 qualifiers)
- d) Multi-stakeholder participation and civil society engagement (2 qualifiers)

This document can be accessed using the Quick Response Code on this page; a FAO initiative to minimize its environmental impact and promote greener communications. Other documents can be consulted at www.fao.org

8. To ensure clarity of definitions and consistency of measure across countries, each element of measure is further underpinned, where meaningful, by specific 'qualifiers'. For the example above, the existence of well-functioning governmental coordination mechanisms to address food and nutrition security element has four qualifiers which define the criteria applicable to a 'well-functioning coordination mechanism'. Similarly, indicators which include terms such as 'adequate', 'effective', 'well-functioning' etc. are all underpinned by detailed qualifiers/criteria. These, as well as detailed metadata for each indicator will be published in May 2014.

9. There are a total of 31 Outcome level indicators across the five Strategic Objectives. Progress against these will be measured (from a 2014 baseline) at the end of the 2014-2015 biennium, and the 2016-17 biennium. The indicators and preliminary baselines where available are presented in this Annex 5 below.

The baseline survey

10. Outcome-level baseline data was obtained through a corporate assessment, which included secondary data collection, when possible, and a pilot baseline survey at country level. To make the best use of existing time and resources, the survey was conducted in a sample of 40 countries during August-September 2013. The sample countries were chosen as being representative of the entire 'population' of 149 countries in which FAO has ongoing activities. The sample also ensured sufficient coverage of the issues which each relevant Strategic Objective aims to address and of all regions where FAO provides its support towards achieving the Strategic Objectives.

11. The collection of secondary data consisted in a mix of Web-based research (from the World Bank, IMF, MDG Web sites, among others) and a review of relevant documents and information gathered at country level. Primary data in this phase was collected through a structured questionnaire, completed by two respondents in each sample country (FAO and UNDP).

12. Once data collection was completed, each Outcome-level indicator was derived through a composite of sub indicators which used data from primary and secondary sources at country level. A score was calculated for each Outcome-level indicator, ranging from zero to one, as a result of an average of the values of the sub-indicators. The score for each indicator was then coded into five classes (High, Medium-High, Medium-Low; Low, No/Negligible). The baseline values presented in this Annex 5 refer to the countries which scores fall into the two highest classes (High and Medium-high) for each particular indicator.

13. For example, for Strategic Objective 1, indicator 1.1.B, percent of countries with improved resource allocation (in terms of adequacy, efficiency and effectiveness) to eradicate hunger, food insecurity and malnutrition, the baseline value is the percentage of countries which currently have a High or Medium-High level of resource allocation, in this case 8.3%.

14. Note that baseline data for Strategic Objective 4 was derived independently of the pilot assessment, and is based on existing secondary data sources such as FAOSTAT and UNIDO Statistics, among others. Also, some indicators (those marked as "TBD", to be determined) require further analysis of secondary data, or present new measurement complexities which will be addressed in the coming weeks.

Completing the results framework

15. Being derived from a pilot assessment, the Outcome-level baseline data presented in this Annex 5 are preliminary and will be updated through a fully-fledged corporate baseline assessment, to be conducted in early 2014. Preparations are already underway, and the design of the survey is being informed by lessons from the pilot. It will be conducted in the same 40 sample countries, but will include a broader range of respondents in each country (including from partner governments, other UN agencies and partners, research institutions/academia, civil society and the private sector) to provide a richer perspective on the country level enabling environment and capacity to achieve the Strategic Objectives. 16. Results from this fully-fledged corporate baseline assessment will allow FAO's Strategic Objective teams to set realistic targets. Final baseline data and targets will therefore be published in May 2014. The baseline assessment is part of the corporate monitoring and reporting framework that FAO has put in place for this biennium. As such, it will be followed by two in-depth assessments at the end of 2015 and 2017 to track progress against the Outcome-level indicators.

FAO results framework

Strategic Objective 1: Contribute to the eradication of hunger, food insecurity and malnutrition

Strategic Objective 2: Increase and improve provision of goods and services from agriculture, forestry and fisheries in a sustainable manner

Strategic Objective 3: Reduce rural poverty

Strategic Objective 4: Enable more inclusive and efficient agricultural and food systems at local, national and international levels

Strategic Objective 5: Increase the resilience of livelihoods to threats and crises

Objective 6: Technical quality, knowledge and services

Chapter 7: Technical Cooperation Programme

Functional Objective 8: Outreach

Functional Objective 9: Information Technology

Functional Objective 10: FAO governance, oversight and direction

Functional Objective 11: Efficient and effective administration

Chapter 13: Capital Expenditure

Chapter 14: Security Expenditure
