

LIBYA

Summary of Bankable Investment Project Profile – Volume IV of V

Great Man–Made River Distribution Facilities

Estimated Cost: US\$325 m

Project Duration: 10 years

Project Objective: to improve the productivity of the agricultural lands around Tripoli by supplying water from the Man–Made River.

Project Components and Main Activities:

- *Construction of irrigation infrastructure (pipeline, irrigation reservoirs, pumping stations);*
- *Design and management of the water distribution network (reservoir to farm gate).*

Benefits. Increased productivity of the irrigated lands, increased food production and farm incomes.

Beneficiaries. Farmers and farm communities as well as the population as a whole. This project supports Priority 1 of the National Medium-Term Investment Programme identified above and corresponds to CAADP Pillar 1.
