Agenda Item 7(b)

CX/PR 22/53/7

May 2022

JOINT FAO/WHO FOOD STANDARDS PROGRAMME CODEX COMMITTEE ON PESTICIDE RESIDUES

53rd Session (Virtual) 4-8 July and 13 July 2022

REVISION OF THE CLASSIFICATION OF FOOD AND FEED: CLASS B: PRIMARY FOOD COMMODITIES OF ANIMAL ORIGIN

(AT STEP 4)

(Prepared by the Electronic Working Group chaired by the United States of America and co-chaired by the Netherlands)

Codex members and observers wishing to submit comments at Step 3 on this document should do so as instructed in CL 2022/35-PR available on the Codex webpage¹
This document should be read in conjunction with working documents under Agenda Items 7(c) and 7(d).

BACKGROUND

- Background on the discussion of the revision of the Classification of Food and Feed (CXM 4-1989) can be found in the reports of the 36th – 52st sessions of the Codex Committee on Pesticide Residues (CCPR) including relevant sessions of the Codex Alimentarius Commission (CAC) held from 2004 to 2021.²
- 2. The practice adopted by CCPR in the revision of the Classification is to retain the revision of the commodity groups (e.g. fruit commodity groups, vegetable commodity groups, etc.) waiting for the final compilation of the related commodity groups and the corresponding tables on examples of representative commodities for inclusion in the Classification of Food and Feed and the Principles and Guidance on the Selection of Representative Commodities for the Extrapolation of Maximum Residue Limits for Pesticides to Commodity Groups (CXG 84-2012) respectively.³
- 3. CCPR52 (2021) agreed to re-establish the EWG on the revision of the Classification, chaired by USA and cochaired by The Netherlands, working in English, and to initiate consideration of Class B, Primary Food Commodities of Animal Origin and Class E, Processed Foods of Animal Origin.⁴

Consideration of Class B

- 4. The EWG considered Class B, which originally included four Types and nineteen Groups as follows:
- 4.1 The inclusion of the additional type MISCELLANEOUS PRIMARY FOOD COMMODITIES OF ANIMAL ORIGIN, aswell as the addition of a new group: Insects and spiders, within type 10 Invertebrate animals was proposed (All changes in the revised version are highlighted in yellow in Appendix I).

3 ALINORM 10/33/24, para. 96, ALINORM 07/30/24 para. 150

Codex webpage/Circular Letters:

⁴ REP21/PR52 para. 179.

4.2 Additional commodities were proposed for inclusion in several groups(yellow highlighting, Appendix I). Group 030 Meat (from mammals other than marine mammals) was divided into eight subgroups, including Subgroup 030A Bovine meat, Subgroup 030B Camelid meat, Subgroup 030C Caprine meat, Subgroup 030D Cervine meat, Subgroup 030E Equine meat, Subgroup 030F Ovine meat Subgroup, 030G Swine meat, and Subgroup 030H Various other mammalian meats.

- 4.3 Accordingly, Group 031 Mammalian fats, Group 032 Edible offal (Mammalian) were also divided into eight subgroups, following the same order as the subgroups for Group 030. Group 033 Milks was divided into six subgroups, including Subgroup 033A Bovine milk, Subgroup 033B Camelid milk, Subgroup 033C Caprine milk, Subgroup 033D Cervine milk, Subgroup 033E Equine milk, and Subgroup 033F Ovine milk.
- 4.4 For type 7 and all its groups the word 'poultry' in the names of the type and groups is changed to 'avian' to allow for a more accurate description of the commodities in type 7.
- 4.5 Group 040 Freshwater fish was divided into six subgroups, including Subgroup 040A Barbs, Subgroup 040B Carps, Subgroup 040C Catfishes, Subgroup 040D Perches, Subgroup 040E Tilapias, and Subgroup 040F Various other freshwater fishes.
- 4.6 Group 041 Diadromous fish was divided into 6 subgroups, including Subgroup 041A Atlantic Salmons, Subgroup 041B Pacific Salmons, Subgroup 041C Eels, Subgroup 041D Smelts, Subgroup 041E Trouts, Subgroup 041F Various other diadromous fishes.
- 4.7 Group 042 Marine fish was divided into seven subgroups, including Subgroup 042A Cod and Cod-like fishes, Subgroup 042B Flat-fishes, Subgroup 042C Mackerel and Mackerel-like fishes, Subgroup 042D Tuna and Bonito, Subgroup 042E Herring like fishes, Subgroup 042F Sharks, and Subgroup 042G Various other Marine fish.
- 4.8 Group 043 was divided in two subgroups: Subgroup 043A Fish roe (including milt= soft roe) and Subgroup 043B Edible offal of fish.
- 4.9 Group 044 Marine mammalian products was divided into two subgroups: Subgroup 044A Marine mammalian meat and Subgroup 044B Fat of marine mammals.
- 4.10 Group 048 (unprocessed) frogs, lizards, snakes and turtles was renamed as 'Amphibians and reptiles' and divided into five subgroups including Subgroup 048A Crocodiles, Subgroup 048B Frogs, Subgroup 048C Lizards, Subgroup 048D Snakes, and Subgroup 048E Turtles.
- 4.11 Group 049 Molluscs (including cephalopods) and other invertebrate animals was renamed as 'Molluscs and various other invertebrate animals' and divided into four subgroups, including Subgroup 049A Bivalves, Subgroup 049B Cephalopods, Subgroup 049C Snails and slugs, and Subgroup 049D Various other invertebrate animals.

DISCUSSION

- 5. During the re-initiation of the EWG, additional commodities were added following comments from the WHO collaborating center that proposed inclusion of several additional commodities and the creation of subgroups for several groups in type 6, 8, and 10 (all new commodities, groups and subgroups are highlighted in yellow in Appendix I).
- 6. Chile, Australia, Saudi Arabia, Canada and Germany noted the absence of bee products, such as honey, among others.
- 7. Germany additionally proposed the addition of Shark, iridescent and crocodiles. Thailand noted a mistake in the zoological orders listed for the species in Group 048.
- 8. Australia provided the Australia and New Zealand Food Standards Code list (Schedule 22). Based on this list several commodities were added to Class B.
- 9. The EU commission shared the 'Annex I' list that contains products of animal origin. Several commodities present in Annex I were found to be missing in Class B and were subsequently added.
- 10. Germany proposed the division of Group 043 into two subgroups. Australia and Germany proposed to include insect in Class B. In accordance with this proposal the new group 'Insects and spiders was added to Class B. Both Chile and Germany noted that several of the included commodities in Class B are species listed in the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) appendices and suggested removal of these species. However, due to prevalent consumption and in order to aid the monitoring of the consumption of these species it is proposed to not remove these commodities.
- 11. Germany also commented that, before finalizing Class B, we should await the outcome on the discussions concerning skin in eWG on Edible Animal Tissue of CCRVDF and CCPR. Since this may have impact on several groups and commodities in Class B.

CONCLUSIONS

12. The revised Class B includes additional commodities and several subgroups were created within excisting groups. A new group 'Insects and spiders' was created and a new type 'MISCELLANEOUS PRIMARY FOOD COMMODITIES OF ANIMAL ORIGIN' was added for the inclusion of honey and other bee product. Additions are highlighted while deletions are crossed-out.

RECOMMENDATIONS

13. CCPR is invited to consider the revised Class B (Appendix I) based on the conclusions and recommendations above as well as comments submitted by Codex members and observers in reply to CL 2022/35-PR.

APPENDIX I

(For comments)

CLASS B PRIMARY FOOD COMMODITIES OF ANIMAL ORIGIN

For the purpose of the Codex Alimentarius the term "primary food commodity" means the product in or nearly in its natural state, intended for processing into food for sale to the consumer or intended for sale to the consumer as a food without further processing. It includes irradiated primary food commodities and products after removal of certain parts of the animal tissue, e.g. bones.

Food commodities of animal origin are parts of domesticated or wild animals, including their eggs and mammary secretions.

TYPE 6 MAMMALIAN PRODUCTS

Mammalian products are derived from the edible parts of various mammals, primarily herbivorous, slaughtered for food. These mammals are usually domesticated, or to a lesser extent obtained as game animals. This type does not include edible products from marine mammals, for which see Group 044.

Meat (from mammals other than marine mammals)

Class B

Type 6 Mammalian products Group 030 Group Letter Code MM

Group 030. Meats are the muscular tissues, including adhering fatty tissues such as intramuscular, intermuscular and subcutaneous fat from animal carcases or cuts of these as prepared for wholesale or retail distribution in a "fresh" state. The cuts offered to the consumer may include bones, connective tissues and tendons as well as nerves and lymph nodes.

The commodity description of "fresh" meat includes meat which has been quick-frozen or quick-frozen and thawed.

The Group does not include edible offal as defined in Group 032.

Exposure to pesticides is through animal metabolism following oral intake with feed or through dermal intake as a consequence of external use of pesticides against ectoparasites.

The entire commodity except bones may be consumed.

Portion of the commodity to which the MRL applies (and which is analysed): Whole commodity (without bones). For fat-soluble pesticides a portion of adhering fat is analysed and MRLs apply to the fat. For those commodities where the adhering fat is insufficient to provide a suitable sample, the whole commodity (without bone) is analysed and the MRL applies to the whole commodity (e.g. rabbit meat) (ref. ALINORM 87/24, Appendix IV, paragraph 6).

Eight subgroups are defined:

Subgroup 030A Bovine meat

Subgroup 030B Camelid meat

Subgroup 030C Caprine meat

Subgroup 030D Cervine meat

Subgroup 030E Equine meat

Subgroup 030F Ovine meat

Subgroup 030G Swine meat

Subgroup 030H Various other mammalian meats

Mammalian fats (except fat from marine mammals)

Class B

Type 6 **Mammalian products** Group 031 **Group Letter Code MF**

Group 031. Mammalian fats, excluding milk fats are derived from the fatty tissues of animals (not processed). For processed animal fats see Group 085.

Exposure to pesticides is through animal metabolism following oral intake with feed or through dermal intake as a consequence of external use of the pesticides against ectoparasites.

The entire commodity may be consumed.

Portion of the commodity to which the MRL applies (and which is analysed): Whole commodity.

The scientific species names of the relevant animals are not repeated for this group of commodities. For these names see Group 030 Meat (from mammals other than marine mammals).

Eight subgroups are defined

Subgroup 031A Bovine fat

Subgroup 031B Camelid fat

Edible offal (Mammalian)

Class B

Type 6 Mammalian products Group 032 Group Letter Code MO

Group 032. Edible offal are edible tissues and organs other than muscles (=meat) and animal fat from slaughtered animals as prepared for wholesale or retail distribution.

Examples: liver, kidney, tongue, heart, stomach, sweetbread (thymus gland), brain, etc.

The group name and definitions are in conformity with those recorded in the Codex Standards 89-1981 and 98-1981, Codex Standard for luncheon meat and Codex Standard for cooked cured chopped meat respectively: "Edible offal" means such offal's as have been passed as fit for human consumption, but not including lungs, ears, scalp, snout (including lips and muzzle), mucous membranes, sinews, genital system, udders, intestines and urinary bladder". IN the former Classification of Food and Food Groups in the Guide to Codex Maximum Limits for Pesticide Residues 1978: CAC/PR 1-1978 the name Meat by-products was used for this group.

Exposure to pesticides is through animal metabolism following oral intake with feed or through dermal intake as a consequence of external use of pesticides on livestock animals against ectoparasites.

The entire commodity may be consumed.

Portion of the commodity to which the MRL applies (and which is analysed): Whole commodity.

The scientific species names of the relevant animals are not repeated for this group of commodities. For these names see Group 030 Meat (from mammals other than marine mammals).

Eight subgroups are defined

Milks

Class B

Type 6 Mammalian products Group 033 Group Letter Code ML

Group 033. Milks are the mammary secretions of various species of lactating herbivorous ruminant animals, usually domesticated.

In conformity with the Codex Alimentarius Code of Principles concerning Milk and Milk products the term "Milk" shall mean exclusively the normal mammary excretion obtained from one or more milkings without either addition thereto or extraction therefrom. Notwithstanding the provisions in the preceding paragraph, "the term "Milk" may be used for milk treated without altering its composition, or for milk, the fat content of which has been standardised under domestic legislation".

The entire commodity may be consumed.

Portion of the commodity to which the MRL applies (and which is analysed): Whole commodity.

The scientific species names of the relevant animals are not repeated for this group of commodities. For these names see Group 030 Meat (from mammals other than marine mammals).

Eight subgroups are defined

Subgroup 033A Bovine milk

Subgroup 033B Camelid milk

Subgroup 033C Caprine milk

Subgroup 033D Cervine milk

Subgroup 033E Equine milk

TYPE 7 POULTRY AVIAN PRODUCTS

Poultry Avian meat (including Pigeon meat)

Class B

Type 7 Poultry Avian products Group 036 Group Letter Code PM

Group 036. PoultryAvian meats are the muscular tissues including adhering fat and skin from poultry carcases as prepared for wholesale or retail distribution.

Exposure to pesticides may result from external treatment of animals or poultry houses or through animal metabolism following oral intake of pesticides with feed.

The entire product may be consumed.

<u>Portion of the commodity to which the MRL applies (and which is analysed)</u>: Whole commodity (without bones): For fat-soluble pesticides a portion of adhering fat is analysed and MRLs apply to the poultry avian fat.

Poultry Avian fats

Class B

Type 7 Poultry Avian products Group 037 Group Letter Code PF

Poultry Avian fats are derived from the fatty tissues of avian animals. Exposure to pesticides may result from external treatment of animals or poultry houses or through animal metabolism following oral intake of pesticides with feed.

The entire product may be consumed.

Portion of the commodity to which the MRL applies (and which is analysed): Whole commodity.

The scientific species names of the relevant animals are not repeated for this group of commodities. For these names see Group 036 Poultry Avian meat.

Poultry Avian, Edible offal of

Class B

Type 7 Poultry Avian products Group 038 Group Letter Code PO

Poultry Avian edible offal's are such edible tissues and organs, other than avian meat and avian fat, from slaughtered avian animals as have been passed fit for human consumption. Examples: liver, gizzard, heart, skin etc. In the former Classification of Food and Food Groups in the Guide to Codex Maximum Limits for Pesticide Residues 1978: CAC/PR 1-1978 the name Poultry by-products was used for this group.

Exposure to pesticides is through animal metabolism following oral intake of pesticides with feed or may result from external treatment of animals or poultry houses.

The entire product may be consumed.

Portion of the commodity to which the MRL applies (and which is analysed): Whole Commodity.

Eggs

Class B

Type 7 Poultry Avian products Group 039 Group Letter Code PE

Group 039. Eggs are the fresh edible portion of the body produced by female birds, especially domestic fowl.

The edible portion includes egg yolk and egg white after removal of the shell.

<u>Portion of the commodity to which the MRL applies (and which is analysed</u>): Whole egg whites and yolks combined after removal of shell.

The scientific species names of the relevant animals are not repeated for this group of commodities. For these names see Group 036 Poultry Avian meats.

TYPE 8 AQUATIC ANIMAL PRODUCTS

Aquatic animal products re derived from the edible parts of various aquatic animals, usually wild, harvested for food.

Group 040-042 Fish

Group 040-042 Fish are gilled, aquatic vertebrate and/or cartilaginous animals of various zoological families and species, usually wild, as caught and prepared for wholesale and retail distribution. Exposure to pesticides is through animal metabolism or through water pollution. The fleshy parts of the animals and, to a lesser extent, milt and roe are consumed.

<u>Portion of the commodity to which the MRL applies (and which is analysed).</u> Whole commodity (in general after removing the digestive tract).

Group 040 Freshwater fish

Class B

Type B Aquatic animal products Group 040 Group Letter Code WF

The freshwater fishes generally remain lifelong, including the spawning period, in fresh water (lakes, ponds, rivers and brooks).

Several species of freshwater fish are domesticated and bred in fish farms. Exposure of the latter species to pesticides is mainly through compounded fish feed and can also be through water pollution.

Six subgroups of freshwater fishes are defined

Subgroup 040A Barbs

Subgroup 040B Carps

Group 041 Diadromous fish

Class B

Type B Aquatic animal products Group 041 Group Letter Code WD

The diadromous fishes in general migrate from the sea to brackish and/or fresh water and in the opposite direction.

The anadromous species spawn in fresh water (streams, small rivers and brooks) e.g. several salmon species, whereas eels spawn in the ocean. Some species, such as trout, are domesticated and do not migrate. they are bred in fish farms in ponds, mountain streams etc. The latter species especially may be exposed to pesticides through compounded fish feed and also through water pollution.

The fleshy parts of the animals and, to a lesser extent, roe and milt are consumed.

Portion of the commodity to which the MRL applies (and which is analysed): Whole commodity (in general after removing the digestive tract.

Six subgroups of diadromous fish are defined:

Group 042 Marine fish

Class B

Type 8 Aquatic animal products Group 042 Group Letter Code WS

The marine fishes generally live in open seas. They are all or nearly all wild species, caught and prepared (often deep-frozen) for wholesale and retail distribution. Exposure to pesticides is mainly through water pollution and animal metabolism.

Especially the fleshy parts of the animals and to a lesser extent roe and milt are consumed.

<u>Portion of the commodity to which the MRL applies (and which is analysed)</u>: Whole commodity (in general, after removing the digestive tract).

Seven subgroups are defined

Subgroup 042A Cod and Cod-like fishes

Subgroup 042B Flat-fishes

Subgroup 042C Mackerel and Mackerel-like fishes

Subgroup 042D Tunas and Bonitos

Subgroup 042E Herring like fishes

Subgroup 042F Sharks

Subgroup 042G Various other Marine fishes

Fish roe (including milt = soft roe) and edible offal of fish

Class B

Type 8 Aquatic animal products Group 043

Group Letter Code WR for the roe

Group Letter Code WL for liver and other edible fish offal

Fish roes are the edible reproductive bodies of several species of fish. Of some of these only the "hard roe", the female reproductive body, is used whereas both the "hard" and "soft" roe (milt) of other species is marketed.

The term roe used in the commodity description includes if relevant both types of roe.

The liver of some species is used as such for human consumption or for production of liver oils (e.g. cod liver oil).

Exposure to pesticides is through animal metabolism.

Portion of the commodity to which the MRL applies (and which is analysed): Whole commodity.

See for scientific species or family names and subgroup description Group 040-042. The relevant group is indicated after the commodity name with (f) freshwater fishes, (d) diadromous fishes and (m) marine fishes.

Group 043 is divided in two subgroups:

Subgroup 043A Fish roe (including milt= soft roe)

Subgroup 043B Edible offal of fish

Group 043 Fish roe (including milt = soft roe) and edible offal of fish

Code No.	Commodity
WR 0140	Group of Fish roe (including milt= soft roe) and edible offal of fish
	(includes all commodities in Group 043)

WL 0131	Shark, liver (m)
WL 0927	Cod, liver (m)

Marine mammals

Class B

Type 8 Aquatic animal products Group 044 Group Letter Code WM

Several sea mammals are caught on a large scale. The meat of various species is used as food or feed in some areas of the world. The blubber (=whale or seal fat) fat and train oil (oil derived from whale fat) is used after processing as raw material in food or feed manufacture; the sperm oil, as well as the spermaceti (a waxy substance from the head of sperm whales) is mainly used in cosmetics and some other industrial products.

The meat and other product originating from various species of marine mammals are still consumed in some areas of the world. However, the hunting of sea mammals is considered controversial and a ban on commercial whaling is recognized by a majority of countries around the world.

Exposure to pesticides is by consumption of contaminated prey or through water pollution.

The entire commodity except the bones and other inedible parts may be consumed.

<u>Portion of the commodity to which the MRL applies (and which is analysed</u>): Whole commodity as marketed, without bones. For fat-soluble pesticides a portion of the fat is analysed and MRLs apply to the fat.

Two subgroup are defined

Subgroup 044A Marine mammalian meat

Subgroup 044B Fat of marine mammals, unprocessed

Subgroup 044B Fat of marine mammals

Code No.	<u>Commodity</u>
WM XXXX	Subgroup of fat of marine mammals, unprocessed
	(includes all commodities in Subgroup 044B)
WM XXXX	Dolphins, fat unprocessed
WM XXXX	Seals, fat unprocessed
WM XXXX	Whales, fat unprocessed

Crustaceans

Class B

Type 8 Aquatic animal products Group 045 Group Letter Code WC

Crustaceans are aquatic animals of various species, wild or cultivated, which have an inedible chitinous outer shell.

A small number of species live in fresh water, but most of species live in brackish water and/or in the sea.

Exposure to pesticides is through animal metabolism or water pollution.

Crustaceans are prepared for wholesale or retail distribution at a "raw" stage, often still live, "raw" and deep-frozen, or cooked directly after catching and deep-frozen. Shrimps or prawns may also be parboiled and thereafter deep-frozen.

Although the cooked or parboiled crustaceans should be regarded as processed foods, the animals of this group are primarily classified in the Chapter on Primary food commodities, type 8: Aquatic animal products, since several crustaceans are also marketed in a "raw" form, i.e. not exposed to temperatures sufficiently high to coagulate the protein at the surface. A short reference to processed Crustaceans is given at type 17: Derived edible products of animal origin, Group 084 Crustaceans, processed.

The entire commodity except the shell may be consumed: the "raw" commodities, in general, after cooking.

<u>Portion of the commodity to which the MRL applies (and which is analysed</u>): Whole commodity (especially with the small sized species) or the meat without the outer shell, as prepared for wholesale and retail distribution.

Group 045	Crustaceans
Code No.	Commodity
WC 0143	Group of Crustaceans
	(includes all commodities of Group 045)
WC XXXX	Barnacles
	Cirripedia subclass
WC 0146	Crabs
	According to Codex Stan. 90-1981
	edible species of the sub-order <i>Brachyura</i> of the order of the <i>Decapoda</i> and the species of the family <i>Lithodidae</i> (= King Crabs), <i>Scylla</i> spp. (Mud Crabs)
	Freshwater crabs, see crabs, WO 0146
	Sub-order <i>Brachyura</i>
-	Crab, Blue, see crabs, WO 0146
	Callinectes sapidus Rathbun
-	Crab, Edible, see crabs, WO 0146
	Cancer pagurus L.
-	Crab, Tanner, see crabs, WO 0146
	Chionoecetes spp.
WC 0976	Freshwater crayfishes
	Astacus spp. (Europe);
	Procambarus spp. (USA);
	Eustacus spp. (Australia)
WC 0144	Freshwater crustaceans
	Astacus spp. (Europe),
	Procambarus spp. (USA);
	Macrobrachium spp. (Asia, Australia, South and Middle America);
	species of the family Palaemonidae

WC 0977	Freshwater shrimps or prawns, see note 2
	Palaemon spp.; Macrobrachium spp.; Cherax spp.
-	Langouste, see Spiny Lobster
WC 0978	Lobsters
	According to Codex Stan. 95-1981 include
	Homarus spp., family of Nephropsidae and spp. of the families Palinuridae and Scyllaridae, i.e., Spiny lobsters and Slipper lobsters
-	Lobster, American, see Lobsters, WC 0978
	Homarus americanus
-	Lobster, European, see Lobsters, WC 0978
	Homarus gammarus L.;
	syn: Cancer gammarus L.
-	Lobster, Norway, see Lobsters, WC 0978
	Nephrops norvegicus L.;
	syn: Cancer norvegicus L. see also note 1
WC 0145	Marine crustaceans
	All species mentioned in this group, except those recorded as Freshwater Crustaceans
-	Prawns, see Shrimps or Prawns, WC 0979
-	Prawn, Banana, see Shrimps or Prawns, WC 0979
	Penaeus merguiensis (Australia, Indo-Pacific)
-	Prawn, Brown tiger, see Shrimps or Prawns, WC 0979
	Penaeus esculentus (Australia)
-	Prawn, Caramote, see Shrimps or Prawns, WC 0979
	Penaeus kerathurus Forskal (Mediterranean)
-	Prawn, Common , see Shrimps or Prawns, WC 0979
	Palaemon serratus Pennant (Europe, Mediterranean)
-	Prawn, Eastern king, see Shrimps or Prawns, WC 0979
	Penaeus plebejus (Australia, Indo-Pacific)

WC XXXX Squat Lobster

Cervimunida spp.

Note 1: In some countries, species such as the Norway lobster (Nephrops norvegicus L.) are included in the commodity "Prawns" with some qualifying designation, such as Dublin Bay Prawn or Prawn of Bantry Bay (both Ireland). The Codex Stan. 92-1981 on Quick Frozen Shrimps and Prawns does not prevent this practice, provided that the designation on the label ensures that the consumer will not be misled.

Note 2: There is no clear-cut distinction between Shrimps and Prawns. In several countries the commodity name Shrimps is used for the small species whereas the slightly larger ones are called Prawns. However, a species marked in certain regions of the world as "Prawn" may be called in the local English language in other areas a shrimp and visa versa, e.g., *Pandalus borcalis* is called Northern prawn or Deepwater prawn in the United Kingdom and the same species is named Pink shrimp in Canada. In Australia only the name Prawn is used for animals included in this commodity.

Note 3: Not including the freshwater species of the *Palaemonidae*.

TYPE 9 AMPHIBIANS AND REPTILES

Frogs, lizards, snakes and turtles

Class B

Type 9 Amphibians and reptiles Group 048 Group Letter Code AR

Frog, lizard, snake, crocodile and turtle products are the edible parts from various animal species of the zoological classes Amphibia and Reptilia, usually wild, harvested for food. Some frog species are cultivated in a few European and Asian countries and to a small extent in the USA and marked in the form of deep-frozen frog legs. The wild species are marketed in the same manner.

A few turtle species are raised from eggs or hatchlings in some tropical countries, especially the Green Turtle.

Exposure to pesticides is through animal metabolism.

The entire product, except the bones and the bony or horny outer shell (turtles), may be consumed.

<u>Portion of the commodity to which the MRL applies (and which is analysed)</u>: Whole commodity as marketed without bones or the outer shell.

Five subgroups are defined

TYPE 10 INVERTEBRATE ANIMALS

Invertebrate animals are cold-blooded animals without a vertebral column, or spine. Invertebrate animals can live on land or in water.

Molluscs (including cephalopods) and other invertebrate animals

Molluscs and various other invertebrate animals

Class B

Type 10 Invertebrate animals Group 049 Group Letter Code IM

Molluscs are aquatic or land animals of various species, wild or cultivated, which have an inedible outer or inner shell.

The edible aquatic Molluscs live mainly in brackish water or in the sea; several species are cultivated. A few edible species of land snails are cultivated.

Exposure to pesticides is through animal metabolism: the aquatic species also through water contamination.

The entire commodity except the outer or inner shell may be consumed.

Portion of the commodity to which the MRL applies (and which is analysed): Whole commodity after removal of shell.

Insects and spiders

Class B

Type 10 Invertebrate animals Group OXX Group Letter Code IN

Insects are wild-harvested, semi-domesticated or farmed. Several stages of the insects and spiders can be consumed: eggs, caterpillars, puppets and adults. Exposure to pesticides is through animal metabolism

Edible insects and spiders are rich in protein (dry matter), dietary fibre and beneficial fatty acids.

Insects have a exoskeleton made of chitin. The insect body consists of three parts; the head, thorax and abdomen, and insects contain three pairs of jointed legs, compound eyes and one pair of antennae.

Spiders have an exoskeleton. Their body is organized into two tagmata, called the prosoma, or cephalothorax, and the opisthosoma, or abdomen. Almost all adult arachnids have eight legs, however, mites are variable: as well as eight, there are adult mites with six or even four legs

The entire commodity may be consumed.

Portion of the commodity to which the MRL applies (and which is analysed): Whole commodity as prepared for wholesale or retail distribution.

TYPE xx MISCELLANEOUS PRIMARY FOOD COMMODITIES OF ANIMAL ORIGIN

Miscellaneous commodities are those commodities which do not meet the criteria for crop grouping. These criteria include (1) commodity's similar potential for pesticide residues, (2) similar morphology, (3) similar production practices, growth habits, etc., (4) edible portion, (5) similar GAP for pesticides uses, (6) similar residue behavior, and (7) to provide flexibility for setting subgroup tolerances. Due to the heterogeneous nature of miscellaneous commodities, no representative commodity will be established for miscellaneous groups.

Portion of commodity to which the MRL applies (and which is analysed): Whole commodity as prepared for wholesale or retail distribution.
