Note: formerly Kampuchea. Starting with 1999 higher food supply is due to the introduction of a new methodology to estimate production of semi-commercial and subsistence fisheries in inland waters.
Production figures subject to possible upward revisions to account for small-scale production and rice-field fisheries, presently underestimated.

Note: for statistical purposes, the data for China do not include Hong Kong Special Administrative Region, Taiwan Province of China and Macao Special Administrative Region, shown separately.
Starting with 2000, data for non-food uses have been significantly revised downwards. Non-food uses include indicative estimates of amounts of fish used as direct feed in aquaculture and fur farms.

96 CHINA, HONG KONG SAR			- FOOD BALANCE SHEET OF FISH AND FISHERY PRODUCTS IN LIVE WEIGHT AND FISH CONTRIBUTION TO PROTEIN SUPPLY -										FAO-FIPS
Year	Production	Non-Food Uses	Imports	Exports	Stock Variations	Total Food Supply	Population	Per Capita Supply	Fish Proteins	Animal Proteins	Total Proteins	Fish/Animal Proteins	Fish/Total Proteins
	(..... tonnes in live weight)						(thousands)	(kilograms)	(grams per capita per day)			(%)	(%)

Note: the large increase in production since 2002 is due to an improved data collection system, particularly for the artisanal sector.

Note: prior to 1983 supply data are not consistent with results of national consumption surveys, probably due to an underestimated production.
