

Planning the Urban Forest: Ecology, Economy, and Community Development

American Planning Association
World Urban Forum
Rio de Janeiro, Brazil
23 March, 2010

Changing Public Perceptions

Imagine Trees as a Strategic Public Investment:

- To reduce stormwater runoff
- To filter air pollution
- To prevent streambank erosion
- To reduce building energy consumption
- To improve urban quality of life

"A penny saved in environmental protection costs
is a penny earned through wise investments."

What is Urban Forestry?

"A planned and programmatic approach of the development and maintenance of the urban forest, including all elements of green infrastructure within the community, in an effort to optimize the resulting benefits in social, environmental, public health, economic, and aesthetic terms, especially when resulting from a community visioning and goal-setting process."

From the PAS Report, *Planning the Urban Forest*

Planning for Urban & Community Forestry

Project Partners:

- American Planning Association
- USDA Forest Service
- American Forests
- International Society of Arboriculture

Benefits of the Urban Forest

What's right with this picture?

Project Goals

- Provide the rationale and economics of adopting a green infrastructure approach to planning.
- Provide guidance on the principles and practice of sound urban and community forestry to a broad set of professional and lay public officials at the local level.
- Strengthen the relationship between urban planners, urban foresters, water quality and stormwater managers, and professional arboriculturists.
- Provide an opportunity to exchange knowledge between urban and community forestry partners and urban planners, including allied professions such as landscape architecture and the environmental community.

Strategic Points of Intervention

Adopt a Green Infrastructure Approach to Plan Making

- *Community Visioning*
- *Long-range plan-making*

Implement Best Management Practices that Promote Green Infrastructure

- *Preparation of ordinances, regulations, and incentives*
- *Review and approval of applications for development*
- *Preparation of capital improvements programs*

Bringing Nature into the City

Defining urban and community forestry

Why does it matter?

Who are the players?

What are the challenges?

Where are the opportunities?

General Principles

- Get trees to the front of the planning/visioning process.
- Know where you came from to know where you are going Seek out private partners.
- Investing in trees makes economic sense.
- Urban forestry must be sustainable financially; find the resources to fit the plan or vice versa.

Planning Principles

- Incorporate tree ordinance in development code; combine tree/landscape codes with planning codes; ensure consistency both vertically and horizontally with national, state, regional, and local codes.
- Collaborate with developers, greens, etc. to draft ordinance; all interested parties need to play a part in drafting any urban forestry ordinance, provisions, or guidelines.
- PUD regulations should include an urban forestry evaluation checklist or guidelines.
- No ordinance without enforcement personnel.
- Take adaptive management approach to resources.
- Plan for long-term maintenance.

Design Principles

- Use urban forestry to support other planning goals.
- Green infrastructure element, but also link throughout other elements in comprehensive plans.
- Natural environment is part of making neighborhoods livable.
- Make the place right for trees and then pick the right trees.

Case Studies
