MONITORING, MAPPING AND FOLLOW-UP

Mapping FSN Actions at Country Level:

Ongoing Work in Madagascar:
Harmonization AMP-MAFSAN

M. Isaora Zefania ROMALAHY
Permanent Secretariat in charge of Aid Coordination
Office of the Prime Minister

39

OUTLINE OF PRESENTATION

- Update on the existing information management system
- Why harmonization is important?
- How the harmonization AMP-MAFSAN will be done?

THE EXISTING SYSTEM

- Aid Management Platform (AMP-Madagascar)
 - provided by Development Gateway
 - Acquired with the financial assistance from UNDP and World Bank
- Centralizing financial and qualitative data on over 700 projects funded by ODA
 - Multilateral and Bilateral donors
 - INGO and
 - Decentralized Cooperation (twining between local government)
- Updated on quarterly basis by donor themselves
 - Some does it online, some still sends data files
- Managed by a permanent secretariat within the Prime Minister Office

IMPORTANCE OF HARMONIZATION

- Coherence of outputs and results:
 - Many systems in place produce incoherent outputs
- Lack of coordination in planning, monitoring and evaluation and implementations of policies (national level and sectoral level)
- Cost-efficient: No need to make new investment in IT, in personnel etc.
- Enhance capacity development of existing personnel and the administration

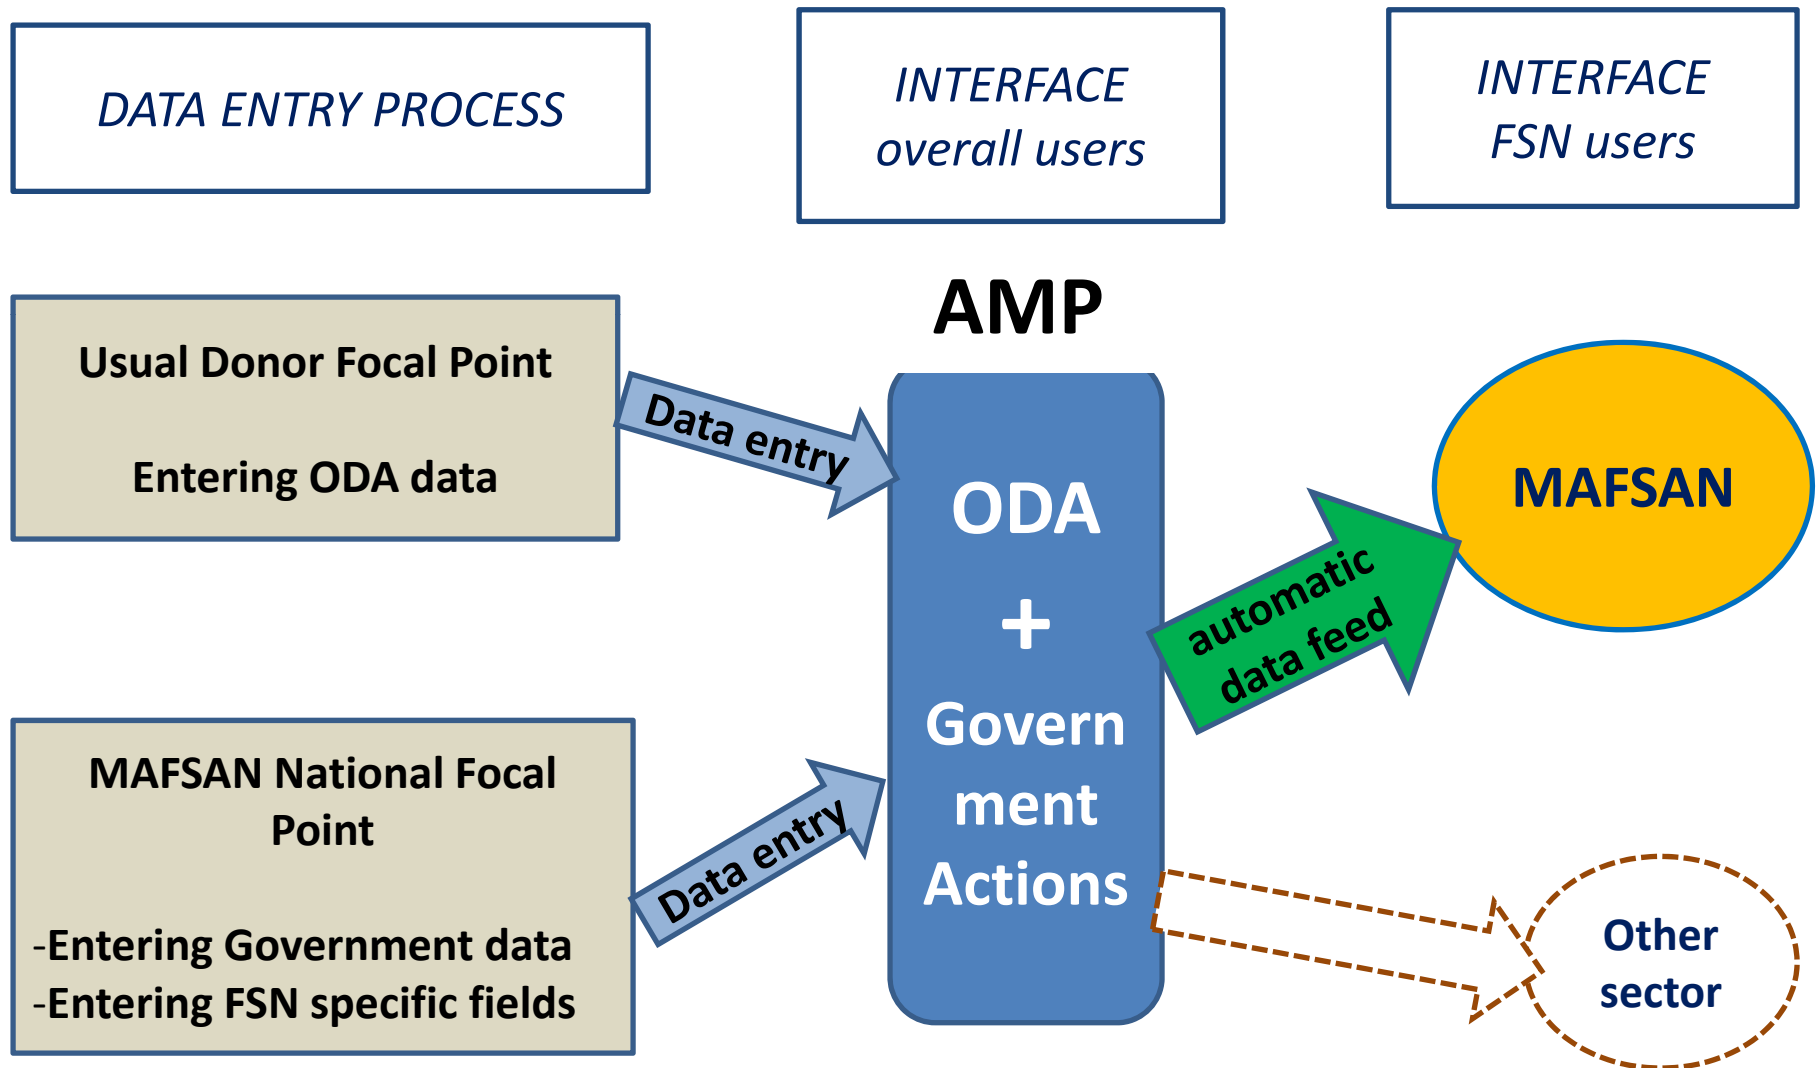

30 AMP-MAFSAN harmonization

- Multi-stakeholder process at national level:
 - Consultation among FSN stakeholders (Government and Donor side)
- Actual stage:
 - Implementation of the Letter of Agreement signed in September with FAO and Development Gateway
 - Identifying the technical aspects in terms IT programming
- Next step:
 - Identifying and tagging FSN projects in the existing database
 - Displaying those FSN projects in MAFSAN interface
 - Collecting additional needed information
 - Developing capacity of national team to bring forward the process and to ensure national ownership

MAFSAN will capture and display FSN data from AMP

AMP-MAFSAN harmonization

CHALLENGES

- Advocacy among national stakeholders for the use of the system
- Lack of capacity of national stakeholders to access the system
 - IT equipments and Internet connexion within the ministries;
 - Awareness of the importance of the uses of data
- The system seems to be done for donors
 - Donors are the most frequent users
