

Dear CFS secretariat,

Switzerland supports the proposals.

Regarding the second question, we understand that the impact on small-scale family farmers is the main issue, however the formulation of the question is not convincing, as two of these policy outcomes are very new. One option is to had one more question already at this stage of the proposal: **Assess the impact of the policy outcomes on the investments (national and international (through international finance institutions) in favor of small-scale family farmers, as well as on capacity building programmes for small farmers, on specific national strategies in favor of small scale family farming, on the development of a better offer in small and medium finance for small farmers.**

Best regards  
Liliane
