

ANNEX A.**Para 4.**

In para 3 it is affirmed that *“All six roles of CFS are important. They are inter-connected and jointly contribute towards achieving the CFS vision requiring the active involvement of CFS member states and stakeholders at all levels”*. However para 4 still gives the impression that CFS will perform its mandate only if related to roles 1, 2, and part of 5. **CFS has 6 roles to play**, and if the activities listed in the MYPoW are prominently related to 1, 2 and 5, the Committee has a role in facilitating the support and advice to countries and regions (role 3) and in promoting coordination and alignment of actions in the field, building on and strengthening existing structures and linking with key partners, including national mechanisms, networks for FSN and UN offices (role 4). Therefore, the language in para 4 (**and consequently in para 9 of the implementation report**) needs to be revised to reflect the **entire CFS mandate**

Para 8.

The language can be aligned to the **reviewed proposal for para 11 of the implementation report**, that reads as follows: *“CFS will support country-led implementation of the 2030 Agenda for Sustainable Development, **focusing primarily on SDG2, and its linkages with FSN relevance of other SDGs and targets**, guided by the following strategic objectives for MYPoW 2020-2023.”*

Para 16.

Proposal of amendment as follows: *“CFS will step up its efforts and support stakeholders in raising awareness of CFS and the use and application of its policy products and recommendations through its communication and outreach activities, **and, to better link CFS with the regional and country levels, including leveraging on or encouraging the creation of FSN multi-stakeholder platforms**. It will continue to report to global bodies such as ECOSOC and share information with other UN bodies as appropriate”*

ANNEX B**Para 5**

See comment on para 8 of Annex A.

Para 12 and following (planning phase).

The sequence should be structured in the following way:

- plenary discussion (based on the HLPE note, but not limited to it)
- chair summary
- Bureau proposal that incorporates elements of the Chair Summary (+ possibility to add topics)

- Bureau proposal shared with members and stakeholders
- possibility for stakeholders to add topics (with timeline)
- open meetings
- Bureau's decision (including on core activities), after consultation with AG - taking into account criteria listed in para 11, resource availability and workload
- plenary endorsement

As we already said in the last evaluation meetings, **we would refrain from applying too rigid criteria for the submission of new topics** (number of proponents, budget estimates, etc).

ANNEX E

Para 2 a)

Proposal of amendment as follows

As a first step to better link CFS to the regional and country level by leveraging on or encouraging the creation of regional and national FSN multistakeholder platforms, CFS Members and other relevant stakeholders can contribute to the creation of a CFS repository that would include a list of the existing such platforms, indicating the functions and actors involved; as well as names of CFS focal points at country-level in ministries, platforms, institutions and agencies. This would contribute to the dissemination and use and application of CFS policy outcomes, **with the active engagement of the RBAs country offices, when feasible and suitable**, but also to the development of CFS policy convergence process through the provision of technical inputs from a wide range of relevant actors. Indications should be provided on the type of support required from the national focal points to guide their nomination.
