

Resilient food supply chains: exposing and addressing gaps

Better lives through livestock

Jimmy Smith
Director General
International Livestock Research Institute (ILRI)

CFS open virtual event

Resilient food supply chains and worker's health during

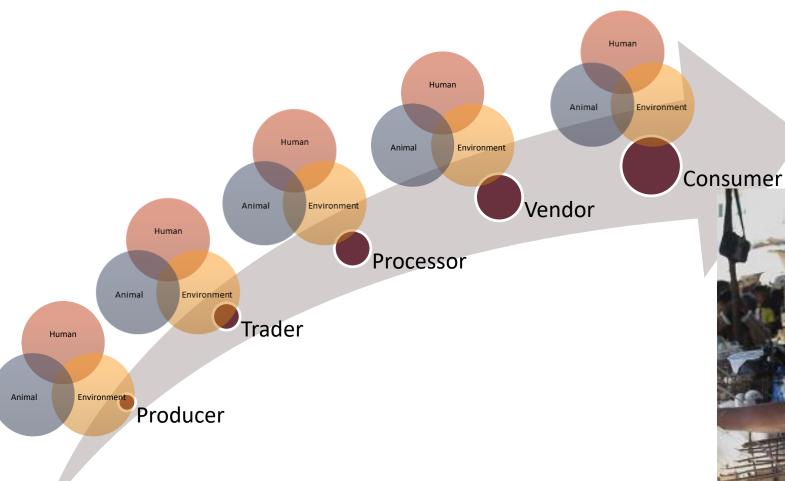

COVID-19

21 July 2020

Inter-connected food supply chains

People, animals and their products

environments

interact in multiple ways with diverse

The inter-connectedness of human, animal and environment health:

One Health

One Health is a prerequisite for resilient, safe food systems

Gaps exposed!

Lack of tailored solutions for very different contexts

Global inter-connectedness matters: local actions to ensure safe, resilient food systems impact globally

One Health is cost-effective to reduce the likelihood of future pandemics

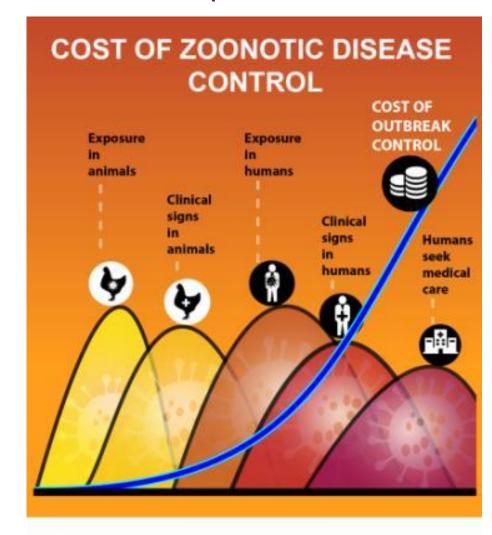

Better animal disease surveillance, and a One Health approach could save billions by addressing disease outbreaks in animals rather than people as timely 'sentinels'

An (under) estimate from last decade:

A global investment of US\$25 billion over 10 years in One Health could generate benefits worth at least US\$125 billion

COVID-19:

UN estimates over \$8.5 trillion loss to global economy over two years

One Health and fresh food markets for food, nutrition and resilience

Food

Local consumers on daily wage

Fresh food daily

Producers daily income

Nutrition

Fresh not processed

Small daily quantities of highly nutritious foods

(no fridge!)

Resilience

Varied and nutritious diet Regular food even on low income

Well nourished children more resilient and healthier, less likely to be stunted

One Health

Invest smartly

Detect early

Collaborate unprecedently

Resilient, safe food systems

Producer, trader, processor, vendor, consumer Human, animal, environment health at every point on the food chain

Gaps addressed

Adapted, appropriate solutions

Knowledge, awareness

Risk based
Incentive and behavior structures

Global inter-connectedness

Connect every level from remote villages, national ministries to global institutions

Connect across disciplines

The International Livestock Research Institute (ILRI) is a non-profit institution helping people in low- and middle-income countries to improve their lives, livelihoods and lands through the animals that remain the backbone of small-scale agriculture and enterprise across the developing world. ILRI belongs to CGIAR, a global research-for-development partnership working for a food-secure future. ILRI's funders, through the <u>CGIAR Trust Fund</u>, and its many partners make ILRI's work possible and its mission a reality. Australian animal scientist and Nobel Laureate Peter Doherty serves as ILRI's patron.
