

# Importance of strong Africa Negociation on Climate Change

By: Abias Huongo

# Layout

- **Introduction**
- **Agriculture in Africa**
- **Mitigation and adaptation**
- **Research and Systematic Observation**
- **Importance of having a strong voice**
- **Conclusion and Recommendations**

# Agriculture in Africa

- **Agriculture constitute the bases for Africa growth and development;**
- **Continent food security;**
- **Increase job creation, rural development and reduce the asymmetries;**
- **Agriculture losses are expected to increase due to current climate conditions;**
- **Most visible impact on climate change is in Agriculture throughout increasing or reduce the rain full**
- **For example, In my country around 78% of population depend on agriculture (revenues, livelihoods)**

# Mitigation and Adaptation

**Continent is facing with climate change impact and a need to adapt to a world in transition. Under the Paris Agreement they also have the duty to comply with international climate target plans and reporting systems. It is a known fact that the cost of measures for reducing greenhouse gas emissions is enormous. In addition, we are already witnessing the impact of climatic changes: extreme rainfall, deadly flooding, persistent droughts and enlarged weather variability. These are all phenomena that urge climate adaptation.**

**Most of Emission in continent are coming from LULUCF, and Paris call for Ambition**

**The continent also need to address properly NAP, mainstream in development, as impact is all read sever**

# Reserache and Systematic Observation

- **Increasing the region capacity to monitor climate condition will be important to reduce looses**
- **elaboration and implementation of policies and programs for Agroecology environmental preservation and give the possibilities that this type of programs and projects would be improvement of the living conditions of the populations,**
- **Program country, to a rigorous observation and Develop an intense scientific activity. -Realize projects carried -scientific research networks.**
- **Cooperation South-South with support of the developed countries \_cooperation, to offer us the establishment of cooperation Sciences, in the field of Soil, Water, Biodiversity**

# Importance of having a strong voice

- **To have a strong and common voice help to show impact of climate change in continent agriculture;**
- **To show how the continent is the most vulnerable;**
- **To call up finance scale up to address challenges;**
- **To increase political support and ambition;**
- **To increase individual and institutional capacity to address the challenges of climate change**
- **To reduce vulnerabilities**

# Conclusions and Recommendations

- **Support NAP process – Elaboration and Implementation**
- **Mainstream of Agriculture Climate Change and Development**
- **Enhance the concept of Farmers first School on Agriculture to respond local needs**
- **Respond to emergent needs increasing international cooperation**
- **Address the existing finance gup**
