# COMPUTER-ASSISTED PERSONAL INTERVIEWING

Michael Lokshin, DECRG

*“...[the World Bank] will closely monitor and observe progress toward these goals of ending poverty and boosting shared prosperity, and will report **annually** on what has been achieved and where gaps remain.”*

A handwritten signature in black ink, appearing to be 'Jeff', written in a cursive style.

**The critical component of improving service delivery is high quality, high frequency data**

# Challenges:

**Frequent data collection**

**Ensuring high data quality**

# Average interval between surveys (years)

**Household**

**Household members**

**Plots**

**Parcels**

# Percentage of missing or invalid answers (questions on learning and literacy)

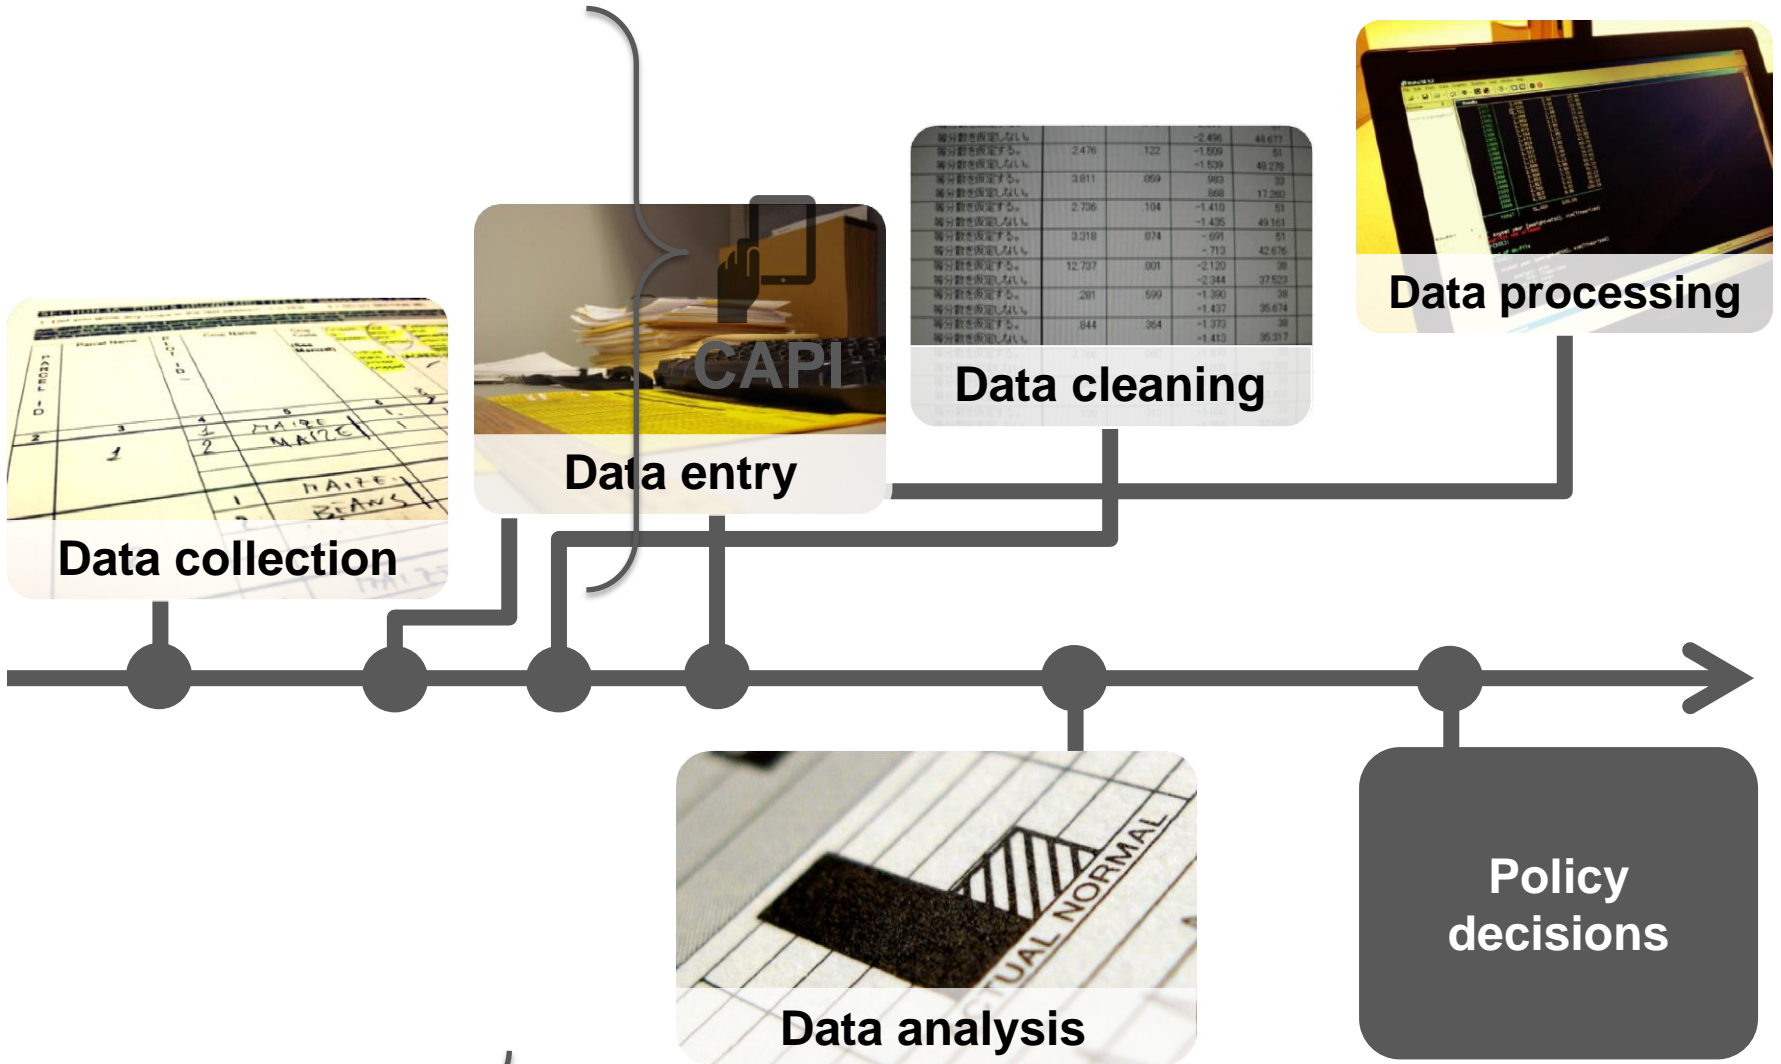

# Solution: CAPI

- Data collection using tablet devices
- Data validation at entry
- Real-time availability of results and metadata
- Automated Survey Management

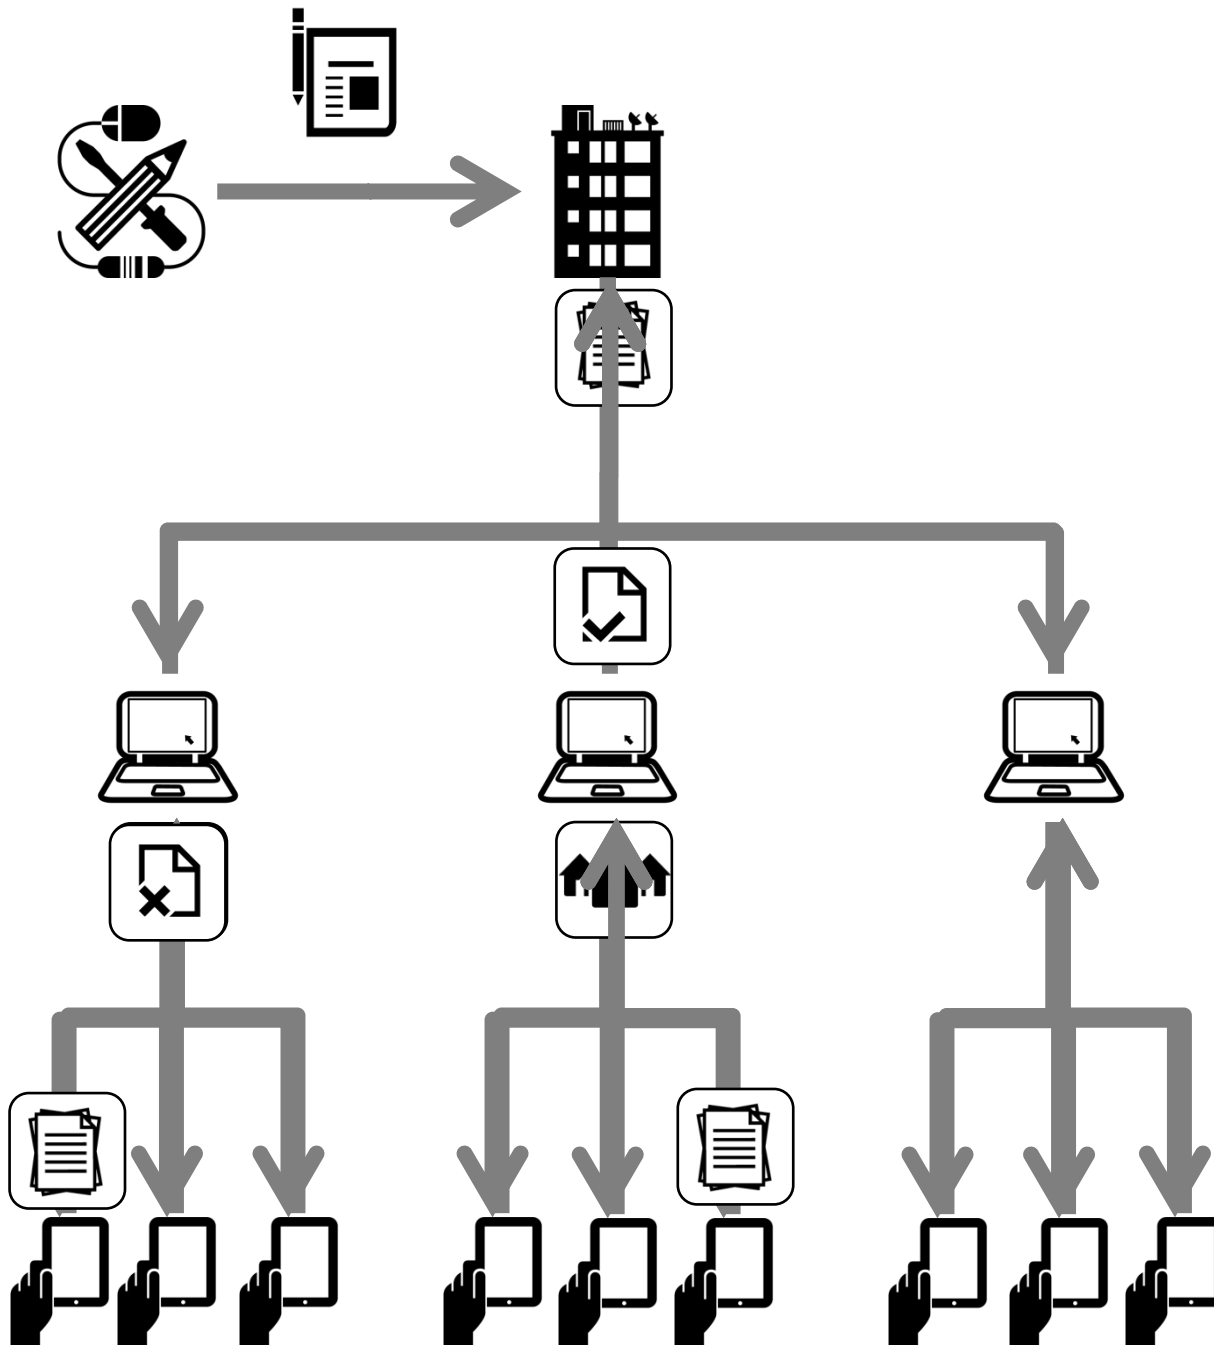

# Results:

From data collection to policy: 4-5 months

Researchers design questionnaires using visual tools and upload them to the central server

HQ distributes the

@ Internet

@ Internet

Supervisors monitor the submissions

Supervisors assign households to individual interviewers

WiFi/USB

WiFi/USB

Interviewers visit households and collect data

**Prices of tablets start from \$60:  
cheaper than paper questionnaires**

**Changes or corrections at no cost**

THE WORLD BANK Designer

Djibouti Enquête de Suivi(v.1.0.2)

A - Tableau du ménage

Les membres du ménage

NOM DE RÉSIDENTS HABITUELS ET VISITEURS S'il vous plaît, donnez-moi

+Add Question

Clone Group

Remove

Quel est le lien de parenté de (NOM) avec le Chef de ménage?

Quel est le sexe de (NOM)?

A4

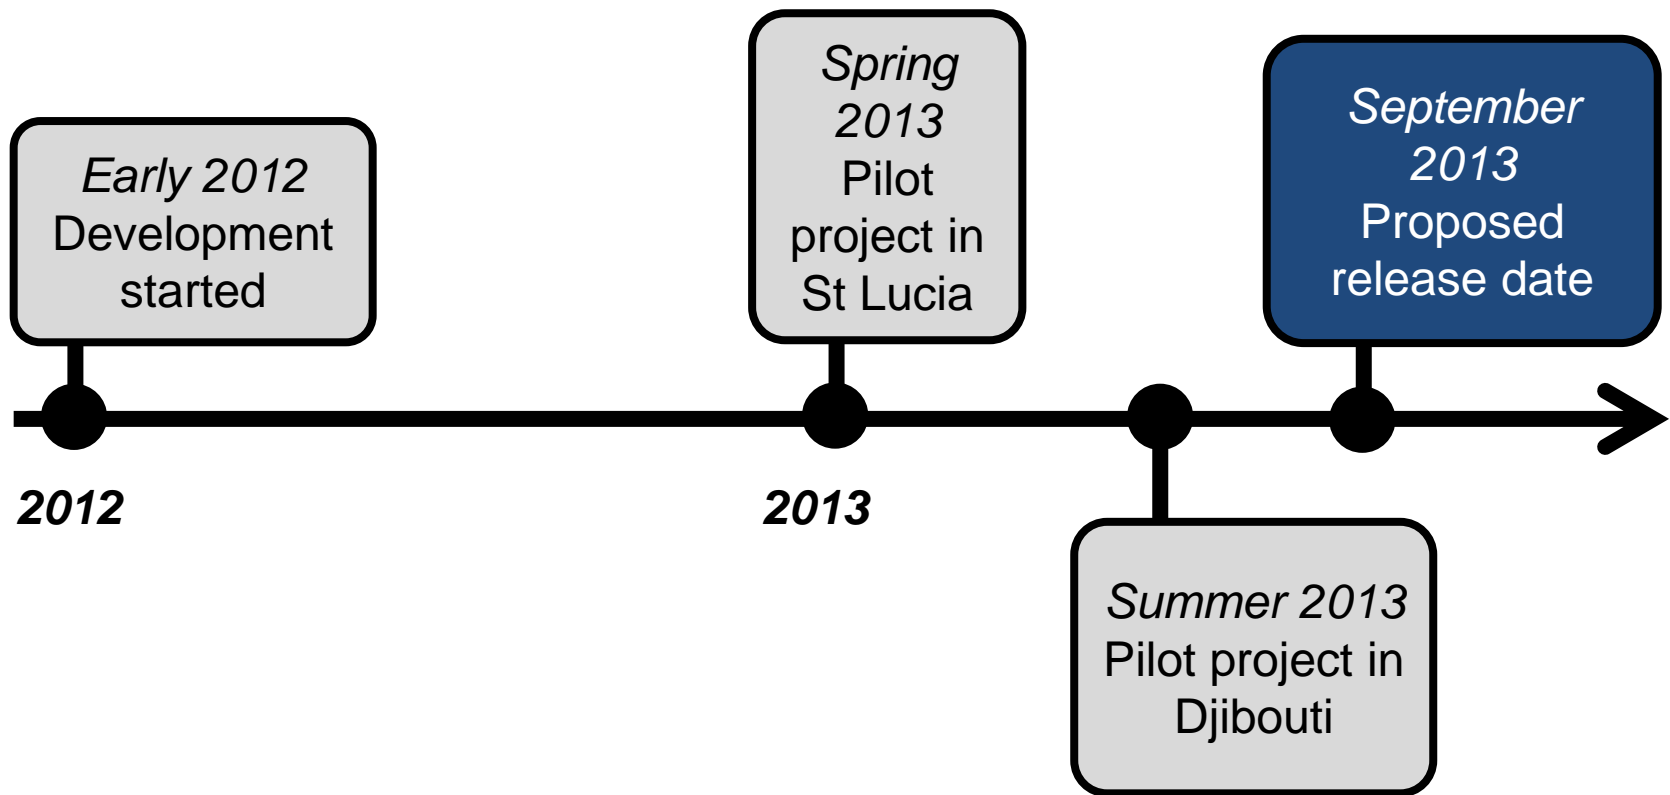

Quel âge a (NOM)? Age en années révolue (00-98 ans)

A5

SI MOINS DE 5 ANS Age en mois révolue (00-59 mois)

A6

# Project timeline

# Why World Bank?

## INCENTIVES

- Private companies will not profit from sales to underfunded statistical offices
- NGOs cannot afford enterprise-grade development
- Universities lack incentives to engage

## RESEARCH

- Large research component
- Benefiting from the LSMS team's expertise
- Huge potential for harnessing the experience of Bank's clients/shareholders

## SUSTAINABILITY

- The World Bank's involvement ensures that the system is supported and maintained as public service, also in the long run

# CAPI benefits: different types of information

**GPS information:** spatial analysis; identifies households in absence of national ID scheme; helps in monitoring migration or measuring land use.

**Project monitoring:** Imagery from the device's camera can be attached and automatically processed.

**Additional sensors** connected to the device can automatically collect data on air/water quality and other parameters

# GPS in action

**Plots can be easily and precisely measured by simply walking around the area with the device enabled**

**Ability to measure distances to banks, schools, roads, wells.  
Maps used for optimal routing**

# Custom sensors

**Water quality testing (pH and dissolved oxygen)**

**Multi-purpose sensor (light/water/air)**

**Precision gas sensor (air quality/carbon monoxide)**

# Other applications

**Portable wireless scale for child malnourishment research**

---

**Vision tests that can be administered directly from the device**

---

**Soil quality tested by a custom sensor for plot fertility measurements**

# Challenges for the next 2-3 years

- **Further training will be required for interviewers and supervisors**
- **New mindset required from survey designers (questionnaires become “multidimensional”)**
- **New sensor devices, compatible with the software, will have to be produced**
- **Users will require better questionnaire compilers/live preview functionality**
- **CAPI should become compatible with a wider range of devices**

# CAPI reduces the cost to \$75M =

Conducting a household  
survey costs, on average, \$1  
million

Household surveys in 100  
countries will require a \$100  
million-budget

of world's  
net ODA

# Summary

- **WB CAPI is a tablet-based technology that can support service delivery by improving availability and quality of the data**
- **The technology dramatically decreases the time required for data collection and analysis**
- **Costs be reduced, allowing the surveys to be conducted in more places and more frequently**
- **Additional data can be gathered by custom sensors and modules such as camera or GPS**
