

Technical Review Meeting on the World Programme for the Census of Agriculture (WCA) 2020

Rome, Italy
7- 8 November 2014

Theme 10 Intra-household distribution of decisions and ownership on the holding

Adriana Neciu

Agricultural Censuses and Surveys
FAO Statistics Division

Outline

- **Introduction of Theme 10 and new approach**
- **Items for distribution of decisions**
- **Items for distribution of ownership**

Introduction

- ❑ **Theme 10 Intra-hh distribution of decisions and ownership on the holding** replaces “**Management of the holding**” theme and implicitly the concepts of “**sub-holding**” and “**sub-holder**”
- ❑ **Objectives:** To reflect more adequately the intra-hh distribution of decision –making and ownership within the holding, particularly to investigate gender –based differences in decision making and owning key agricultural assets (land, livestock)
 - **Revised the approach for assessing the distribution of decisions on the holding**
 - **Introduced the identification of ownership within the household**

NEW

Theme 10 Intra-household distribution of decisions and ownership on the holding

For the holdings in the household sector

Distribution of decisions

+	1001	Sex of household members taking decisions
+	1002	Area of crops by sex of the person responsible for them
+	1003	Number of livestock by sex of the person responsible for them

Distribution of land and livestock ownership

+	1004	Area of land owned by sex of the owner
+	1005	Number of livestock owned by sex of the owner

The new approach

- ❑ **Two options for data collection are provided, for each item of Theme 10 :**
 - (i) Listing decisions/responsibilities and owned assets and making basic sex-disaggregation (male, female, both) for them;
 - (ii) Listing hh members and identifying their decisions/responsibilities and ownership of assets

Items for *distribution of decisions*

□ Two levels of decisions:

Managerial decisions/responsibilities (e.g. this year we plant maize or this year we market all our been production);

Day to day operational decisions (e.g. when to weed or spray the crops or graze the livestock)

Countries should decide on which types of decisions/responsibilities to focus on, the most relevant and feasible in their circumstances

Items for *distribution of decisions cont'd*

1001

Sex of hh members making decisions

(i) indicating, **for each decision**, whether it was made by male hh, female hh or or jointly hh members;

(ii) identifying , **for each hh member**, the decision (s) made by him/her

Items for *distribution of decisions cont'd*

1002

Area of crops by sex of the person responsible for them

**ESSENTIAL
ITEMS**

(i) indicating, out of crop areas (0402 & 0406), the areas under the responsibility of male, female or jointly hh members;

(ii) identifying, for each hh member, the area of crops under his/her responsibility

1003

Number of livestock by sex of the person responsible for them

**ESSENTIAL
ITEM**

(i) indicating, out of the total number of each livestock type (0501), the numbers under responsibility of male, female or jointly hh members

(ii) identifying, for each hh member, the numbers and types of livestock under his/her sole or joint responsibility

Items for *distribution of land and livestock ownership*

NEW

1004

Area of land owned by sex of the owner

(i) disaggregating the owned area collected in items **0205 & 0207**, into areas owned by male, female or jointly hh members

(ii) identifying for each hh member, the area owned solely or jointly by him/her

NEW

1005

Numbers of livestock owned by sex of the owner

(i) indicating out of the total number of each livestock type (**item 0502**), the numbers owned by male, female, or jointly hh members

(ii) identifying for each hh member, the numbers and types of livestock owned solely or jointly by him/her

**Your valuable feedback are most
welcome!**

Thank you!
