FOREWORD

The Department of Agriculture and Cooperation has been organizing national Agriculture Census on quinquennial basis to obtain key information regarding structural changes taking place in the agriculture sector. So far, eight Agriculture Censuses have been completed since 1970-71 and the ninth census is in progress. This publication, which is the outcome of the first phase of Agriculture Census 2010-11, contains valuable information on number and area of operational holdings in the country. This information is used very frequently by various Departments in the Union and State Governments and other data users connected with agricultural planning and development .

The present publication has been brought out in record time, unlike in the past, when four to six years time was taken to publish the result of previous Censuses. This became possible primarily because of meticulous planning, technical backstopping , administrative support and continuous monitoring. I wish to record my appreciation of the outstanding work of Dr. Vidya Dhar, Deputy Director General-cum-Agriculture Census Commissioner and his team in the Agriculture Census Division of this Department. I also wish to convey my thanks to all officers/officials of State/UT Governments without whose wholehearted efforts this mammoth exercise would not have been possible. I hope the results of the Census would be found useful by persons/organizations associated with development of Agriculture in the country. These results would also be made available on the website of the Department.

PREFACE

The contribution of Agriculture and Allied Sector in the Gross Domestic Product (GDP) of the country has been steadily declining over the years and has reached about 14 percent in 2011-12. However, it still remains principal source of livelihood for more than 50 percent of the nation's population. India possesses only 11 percent of world's arable land but it has to feed about 18 percent of world population. To provide food and livelihood security, the Government has been making all out efforts through various Schemes to improve the productivity of land and enhance farm incomes. In this context, collection and maintenance of time series data relating to agricultural operational holdings assumes vital importance.

As part of World Agriculture Census (WCA) Programme, first comprehensive Agriculture Census was carried out in the country with agricultural year 1970-71 as the reference period. In the light of the utility of census data, the second Agriculture Census was conducted in 1976-77. Since then, agriculture censuses have been conducted in the country at five yearly intervals. The current Agriculture Census with reference year 2010-11 is ninth in the series. The present report, which is an outcome of the first phase of Agriculture Census 2010-11, contains data on number and area of operational holdings by various size classes of holdings, social group, types of holding and gender.

Unlike previous censuses, all 35 States/UTs participated in Agriculture Census 2010-11 and the results have been brought out in 15 months, shortest time taken so far. This became possible due to whole hearted cooperation of the State and Union Territory Governments.

I would like to place on record my appreciation to Dr. Vidya Dhar, Agriculture Census Commissioner, Government of India and his team for meticulously planning Census activities and tirelessly pursuing with States/UTs and NIC for bringing out Phase-I results of Agriculture Census 2010-11 in record time.

I hope the report would be used widely by all data users in Government, academicians, Research Institutions and others associated with agricultural development in India as it provides disaggregated information about operational holdings at Tehsil/Block level in the country.

INTRODUCTION

The Government of India has been conducting quinquennial Agriculture Census in the country since 1970-71. So far, eight Censuses have been conducted and the ninth one with reference year 2010-11 is going on in the country. The Census provides crucial information on the structural aspects of Indian Agriculture which continues to be the main stay of the Indian Economy. The concepts and definition used in the Indian Agriculture Census are broadly in conformity with those adopted in the World Census of Agriculture. The basic statistical unit for data collection in Agriculture Census is 'Operational Holding' rather than 'Ownership Holding', as the farm level decisions are taken by persons who operate land and not by those who own it.

The Agriculture Census is conducted in three phases. In Phase-I, all the operational holdings in the country are enumerated and the results giving number and area of operational holdings at various administrative levels like Block/Tehsil, District and State are generated according to various size classes, social groups, types of holding and gender.

The results of first phase of the ninth Census have now been prepared for all the 35 States/UTs and is being published in the form of an All India Report on number and area of operational holdings. As per the findings of this report, the total number of operational holdings in the country has increased from 129 million in 2005-06 to 138 million in 2010-11 showing an increase of 6.61 percent in 2010-11 over 2005-06. The operated area has also increased to 159.18 million ha. in 2010-11 from 158.32 million ha. in 2005-06, indicating a marginal increase of 0.54 percent. The operated area has primarily increased because the State of Jharkhand participated for the first time in Agriculture Census 2010-11 since the State came into being in the year 2000, while in Bihar, the field work has been successfully completed in all the Anchals for the first time after 1980-81 Census. In Rajasthan the operated area increased as the Government

of Rajasthan distributed waste land(culturable) among landless households during 2010-11. In North Eastern States, data is collected on sample basis and because of prevalence of joom cultivation in these States, fluctuations occur in the operated area.

The average size of operational holdings has been steadily declining in the country in successive censuses. The Average operated size of holding which was 1.23 ha in 2005-06, has declined to 1.16 ha in 2010-11 at All India level.

I am happy to record that for the first time, Phase-I results have been made available in public domain in a record time span of just 15 months. This has been possible because of active and whole-hearted cooperation by all the officers/officials associated with the programme of Agriculture Census, 2010-11 in States/UTs and at Central level.

I would specifically like to place on record my appreciation to the large number of functionaries of State/UT Governments for their contribution in Census work without whose efforts this mammoth exercise would not have been completed. I would also like to commend the efforts of officers and staff of the Agricultural Census Division in this Department who worked sincerely and tirelessly to monitor census operations and provide administrative and technical support to the States/UTs.

The data would also be made available on the website <http://agcensus.nic.in> soon.

(Vidya Dhar)

Technical Notes

1. Definitions

Operational Holding:

All land which is used wholly or partly for agricultural production and is operated as one technical unit by one person alone or with others without regard to the title, legal form, size or location.

Technical Unit:

An unit of land which is under the same management and has the same means of production such as labour force, machinery and animals.

Operated area:

Operated area includes both cultivated and uncultivated area, provided part of it is put to agricultural production during the reference period. If, for instance, an operational holding consists of four survey numbers out of which one survey number is put to non-agricultural uses, the total area of the operational holding will be equal to the total geographical area of all the four survey numbers.

Operational holder:

A person who has the responsibility for the operation of the agricultural holding and who exercises the technical initiative and is responsible for its operation. He may have full economic responsibility or may share it with others. The operational holder may be Individual/Joint/ Institutional.

- i) *Individual:* If the holding is being operated either by one person or by a group of persons who are the members of the same household, such holding will be considered as an individual holding.
- ii) *Joint:* If two or more persons belonging to different households, share jointly as partners in the economic and technical responsibility for the operation of an agricultural holding, such holding will be considered as joint holding.

- iii) *Institutional*: Holdings such as government farms, farms of sugarcane factories, cooperative farms, lands managed by trusts would be treated as institutional holdings.

Size classes and Size groups of Holdings:

The data are presented at All India level and for all States and Union Territories in the following size classes and size groups of operational holdings

S.No.	Group	S.No.	Classes (in ha.)
I.	Marginal	1.	Below 0.5 ha.
		2.	0.5 – 1.0 ha.
II.	Small	3.	1.0 – 2.0 ha.
III.	Semi-medium	4.	2.0 – 3.0 ha.
		5.	3.0 – 4.0 ha.
IV.	Medium	6.	4.0 – 5.0 ha.
		7.	5.0 – 7.5 ha.
		8.	7.5 – 10.0 ha.
V.	Large	9.	10.0 – 20.0 ha.
		10.	20.0 and above.

2. Sampling design

For the collection of data in the Agriculture Census, an approach of Census-cum-sample survey has been adopted. Various States in the country have been grouped in to two categories i.e. land record States and non-land record States. Those States where comprehensive land records are maintained giving information on land and its utilization, cropping pattern etc are called land record States and those States where such information is not maintained in the form of land-records are called non-land record States. In land record States data on Agriculture Census is pooled for all the parcels of an operational holding irrespective of its location. However, for operational convenience the outer limit for pooling is restricted to taluka. This pooling is done for each operational holder in the village of his residence. In the non-land record States the data is collected through sample survey following household enquiry approach in 20% of villages in each block. In these selected villages, all the operational holdings are enumerated following household enquiry approach.

Thus in land record States no sampling is resorted to for data collection for the number and area of operational holdings and in non-land record States sampling of villages in each block/taluka is resorted to.

3. Attributes of disaggregation

This report contains the number and area of operational holdings distributed with reference to the following variables:

- Size category (Marginal, Small, Semi-medium, Medium and Large)
- Social groups (SC, ST and Others)
- Types of Holding (Individual, Joint, Institutional)
- Gender (Male, Female)
- States (all states and Union Territories of Indian Union)

All India Report on Number and Area of operational holdings – 2010-11

1. Methodology

1.1 Agriculture Census is the largest countrywide statistical operation undertaken by the Ministry of Agriculture, Government of India for collection of data on the structural profile of Indian agriculture. The first Agriculture Census in the country was conducted with reference year 1970-71. So far eight Agriculture Censuses have been conducted at five yearly intervals. The ninth Agriculture Census is presently going on.

1.2 This report presents the summary results obtained during Phase-I of the ninth Agriculture Census with reference year 2010-11 (July to June). Phase-I of the census operation is carried out for all the agricultural operational holdings in the country.

1.3 The Census is carried out in three Phases. During Phase-1, a list of all the holdings with data on primary characteristics like area, gender and social group of the holder and its location code etc. are prepared. During Phase-II detailed data on irrigation status, tenancy particulars, cropping pattern, number of crops taken etc. are collected. Phase III, popularly known as Input Survey, relates to collection of data on the pattern of input use across various crops, regions and size groups of holdings.

1.4 In States where the revenue agency maintains the record of ownership of holdings and regular crop inspections are carried out, such records form the basis for conducting Phase-I of the Census operations. In non-land record States & UTs, viz. Kerala, Meghalaya, Manipur, Nagaland, Orissa, Tripura, Sikkim, West Bengal, Arunachal Pradesh, Goa, Daman & Diu, Lakshadweep and Mizoram, such data are not available for preparing the frame for Agriculture Census. In these States, a list of land holding household is prepared in 20 percent villages which are same as those selected for the scheme Establishment of an Agency for Reporting of Agricultural Statistics (EARAS) for the reference year of the Census. The data for Phase-I is collected on all the holdings in these 20 percent sample villages. Punjab, though a land record State, followed the procedure for data collection as in case of non-land States. For Phase II, further sampling of holdings is carried out for collection of detailed data. The sampling procedure, however, varies from State to State, depending upon the size and other relevant characters of the States/UT.

1.5 In the Land Record States, the data on the number and area of holdings is collected in the specified schedules using the land records as

benchmark. However, as per the concepts and definitions followed in the Census, effort is made to obtain the de facto position rather than de jure position. A number of parcels of land scattered within a tehsil but operated by an individual or a single household are clubbed together to make a single holding. Similarly, such holdings on which partitions had taken place in practice, though not legally, are counted as separate holdings. The list of operational holdings is manually sorted according to social groups, viz. SCs, STs and others, of the holder and size of the holding at village level. Collection of the data on number and area of operational holdings according to gender of the holder was introduced for the first time during 1995-96 Census. Various tables prepared at village level are aggregated at Taluka, District, State and finally at all India level.

2. The Highlights of the Report on Number and Area of Operational Holdings, 2010-11:

2.1 As per the Agriculture Census, 2010-11, the total number of operational holdings in the country has increased from 129 million in 2005-06 to 138 million 2010-11 i.e. an increase of 6.61%.

2.2 There is a marginal increase in the operated area from 158.32 million ha. in 2005-06 to 159.18 million ha. in 2010-11 showing an increase of 0.54%. The operated area has primarily increased because the State of Jharkhand participated for the first time in Agriculture Census 2010-11 since the State came into being in the year 2000.

2.3 The average size of operational holding has declined to 1.16 ha. in 2010-11 as compared to 1.23 in 2005-06.

2.4 The percentage share of female operational holders has increased from 11.70 in 2005-06 to 12.79 in 2010-11 with the corresponding operated area of 9.33 and 10.36.

2.5 The small and marginal holdings taken together (below 2.00 ha.) constitute 84.97 percent in 2010-11 against 83.29 in 2005-06 and the operated area at 44.31 percent in the current Census as against the corresponding figure of 41.14 percent in 2005-06.

2.6 The semi-medium and medium operational holding (2.00 ha. – 10.00 ha.) in 2010-11 were 14.30 percent with the operated area at 44.77 percent. The corresponding figures for 2005-06 Census were 15.86 and 47.05 percent.

2.7 The large holdings (10.00 ha. & above) were 0.73 percent of total number of holdings in 2010-11 with a share of 10.92 percent in the

operated area as against 0.85 percent and 11.82 percent respectively for 2005-06 Census.

2.8 Out of 35 States/UTs in the country, it was found that 13 States viz. Andhra Pradesh, Bihar, Chhattisgarh, Gujarat, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Rajasthan, Tamilnadu, Uttar Pradesh and West Bengal account for about 91% in terms of number of operational holdings with almost equal share of operated area (about 88%) in 2010-11.

2.9 In a total of 137.76 million operational holdings in the country, the highest number belonged to Uttar Pradesh (22.93 million) followed by Bihar (16.19 million), Maharashtra (13.70 million), Andhra Pradesh (13.18 million), Madhya Pradesh (8.87 million), Tamil Nadu (8.12 million), Karnataka (7.83 million), West Bengal (7.12 million), Rajasthan (6.89 million), Kerala (6.83 million) etc. with the lowest number of only 714 operational holdings in U.T. of Chandigarh.

2.10 Out of a total of 159.18 million hectares operated area in the country in 2010-11, the highest contribution was made by Rajasthan (21.14 million ha.) followed by Maharashtra (19.84 million ha.), Uttar Pradesh (17.09 million ha.), Madhya Pradesh (15.84 million ha.), Andhra Pradesh (14.29 million ha.), Karnataka (12.16 million ha.), Gujarat (9.98 million ha.) etc. with the lowest operated area of 923 hectares in U.T. of Chandigarh.

2.11 As compared to 2005-06, percentage variation in number of operational holdings in 2010-11 was highest in case of Madhya Pradesh (12.19 percent) followed by Rajasthan (11.35 percent), Bihar (10.47 percent), Daman & Diu (9.60 percent), Andhra Pradesh (9.39 percent), Goa (9.04 percent), Chhattisgarh (8.26 percent), Odisha (7.14 percent), Puducherry (5.56 percent), Jammu & Kashmir (5.20 percent), Nagaland (5.06 percent) etc. However, operated area showed declining trend in most of the States.

2.12 A set of tables giving all India distribution of number of holdings and area operated and the state-wise breakup of distribution of the number of operational holdings and area operated by major size groups is presented in the tables that follow.

Percentage share of different social groups in number of operational holdings as per Agriculture Census 2010-11
