

Expert meeting 2

Developing SSPARS and Integration into NSDS

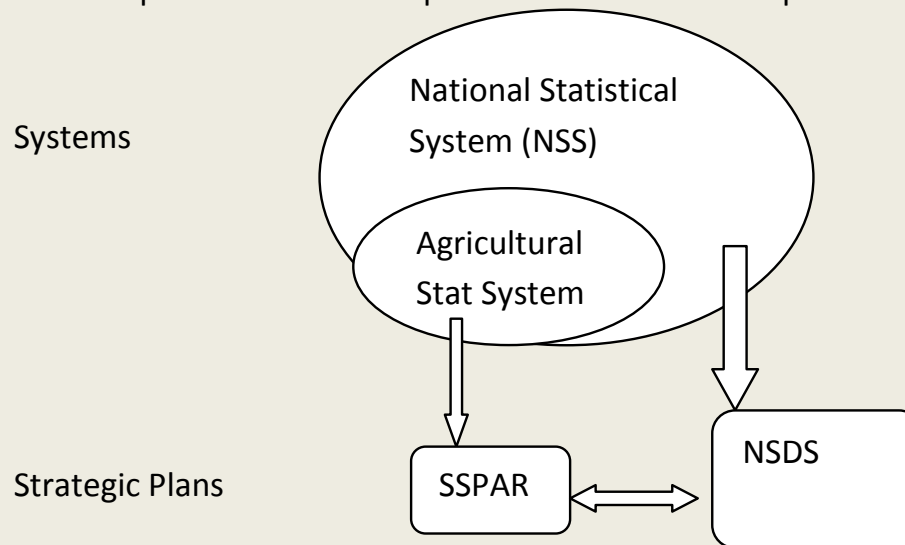

Current Situation & Links to the Global Strategy

Place of SSPARS in the National Statistical System

- SSPARS – building blocks of NSDS
 - Only 43 of 78 (55%) IDA countries have planned to include agriculture into NSDS
 - Of these only 4-10 have included agriculture appropriately
- Paris21 (2008)*

The following scheme depicts the relationship between the main components of the system:

Relation of SSPARS to Global Strategy

- Pillar 2: Integration of agriculture into the national statistical system
- Integration allows understanding of impact of agriculture on other sectors – poverty, national accounts, environment
- Coordination of the collection and analysis of agricultural data
 - Avoids duplication of effort and expense
 - Provides consistent statistics among producers

Relation of Global Strategy to SSPARS

Minimum [core data set](#) :

- Key starting point for SSPARS – discussion with stakeholders
- Countries decide core data items to collect and **for which products** (e.g. maize, livestock)

Integration of Agriculture into NSS

- Broader conception of agriculture cuts across social and environmental sectors leads to
- Consideration of mechanisms for integration: legal framework, mechanisms for coordination (e.g. National Statistical Council), common systems for dissemination

Relation of Global Strategy to SSPARS

- GS will inform the framework and strategic goals of the SSPARS
- Core data selected will inform strategies for statistical data collections and analysis and necessary human and material resources
- In depth country assessment – forms part of the SSPARS assessment phase

Current Activities

- SSPARS pilots Peru, Mozambique, Laos completed
 - Mozambique: High Council on Statistics, chaired by Prime Minister approves the Master Plan for Agricultural Statistics
 - Peru – SSPARS approved by Office of Economic and Statistics Studies - Ministry of Agriculture (MINAG)
 - Laos – sector plan pilot
- Ongoing
 - Tanzania
 - Malawi
