

An example of
NGO-

facilitated food
waste
reduction
measures

by Costin Damasar,

SEMA Association, Romania

Romanian food waste issues

- According to Romanian authorities, in 2006, the average Romanian citizen threw away **125 kg of edible food**, around **half** of what they bought.
- **One out of five products** gets to the dumpster still rapped in the original package.
- **Vegetables, fruits, fish and processed meat** are the main edibles found at the landfill.

- Since the beginning of this video 16 people died of starvation around the world. 5 of them were children. Meanwhile we would have thrown away 3805 tons of food. Until the end of this day 20864 people would have died of hunger.
- We **can** change that, we **should** change that, it's a matter of **will**. The cultural change will do the work – that's why NGOs must accompany the implementation of the strategy all the way

Why suffer when we can prosper together ?

Thank you for your attention!
