

NICOLE's Evolution as a Multi-stakeholder Network in Tackling Industrial Soil Pollution

Johan De Fraye – Chair of NICOLE

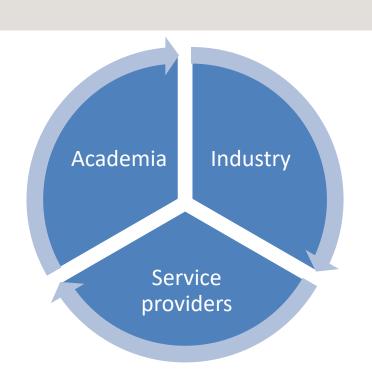

What is NICOLE?

Established in 1996 as a Concerted Action project under the 4th Framework Programme of the European Community Now member funded only

Development and promotion of state-of-the-art solutions for contaminated land management

NICOLE activities

- Two workshops per year
- Industry, Service Providers and Academic sub-groups
- Working Groups: Sustainable Remediation,
 Mercury, Regulatory Issues, Asbestos,
 Emerging Pollutants, Innovation
- Innovation Award

- Publications, position papers and reports
- Collaboration with Common Forum and other networks such as NICOLE Latin-America and NICOLA(frica)
- Part of the Editorial Board for the
 FAO/UNEP/WHO Global Assessment Soil
 Pollution Report

NICOLE Development and focus

Regulatory compliance

Science based solutions

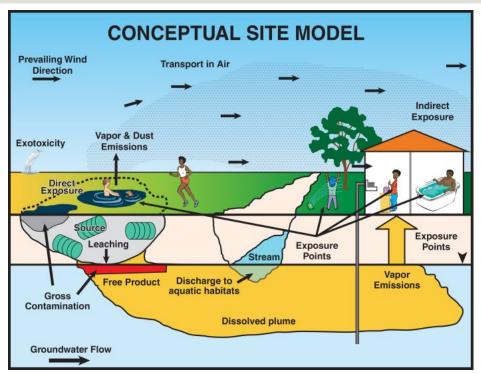

Risk based approaches

Sustainable remediation

Land stewardship

Risk-based remediation

Source – Pathway – Receptor

If one of these components is missing, there is no risk

Requires thorough investigation of

- sources
- possible pathways
- possible receptors (human, nature, water)

Remediation: aimed at taking away the source or the pathway (sometimes the receptor)

Source: www.itrcweb.org

Risk-based approach = acknowledgement that total removal of soil and groundwater pollution to reach pristine conditions is often not possible

Investigate Assess risk Design Determine Remediate Monitor and close

From Risk-based to Sustainable Remediation

A sustainable remediation project is one that represents the best solution when considering environmental, social and economic factors, as agreed by the stakeholders

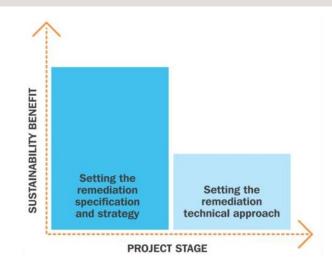

- A comprehensive approach to optimizing the management of contaminated sites
- Relies heavily on building consensus between multiple parties

https://nicole.org/uploadedfiles/2010-wg-sustainable-remediation-roadmap.pdf

Sustainable Remediation Principles

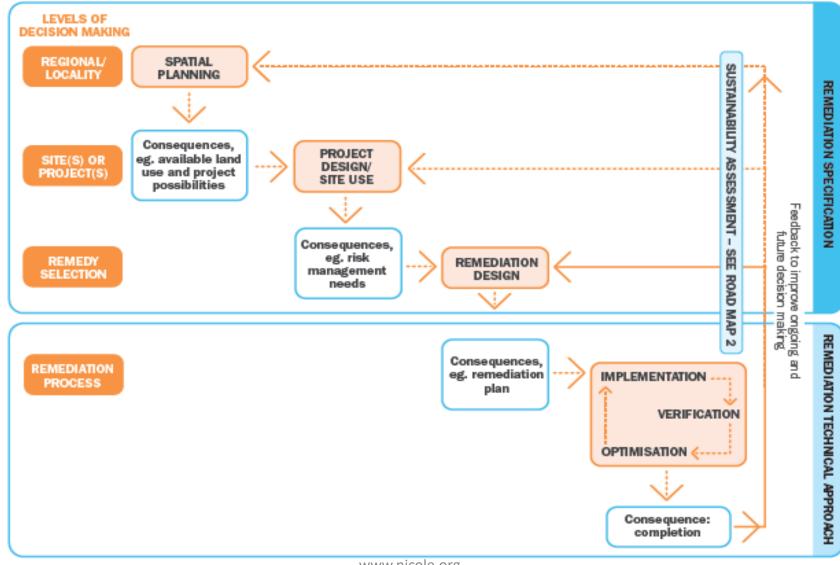

- The earlier in the process the more sustainable gain
- It is more than Green Remediation
- Measuring performance to build trust and consensus
- Not a technical but a consensus building approach
- Communication is the number one barrier and enabler
- Favours a bottom-up approach

* NICOLE

Sustainability Management

London 2012 Olympic and Paralympic Games

"From the outset of the project, the Olympic Park has set new standards in sustainability, including the delivery of lightweight venues, the recycling or reuse of waste materials, using concrete with a high recycled content, and delivering materials by rail or water. We have achieved new standards for a project of this size and scale and have raised the bar for the industry."

John Armitt, ODA Chairman

Current and Future Developments

- Land Stewardship
- Liability Transfer in Europe Publication
- Foundation: harnessing the collective skills and experience of members
- Growing interaction with NICOLE spin-offs in Latin-America and Africa
- Broadening the network to other stakeholders?

THANK YOU
