GLOBAL SYMPOSIUM ON SOIL INFORMATION AND DATA

MEASURE
MONITOR
MANAGE

ASSESSING THE SOIL CAPACITY TO PRODUCE FOOD AND BIOMASS WORLDWIDE

Nícolas Augusto Rosin, Alex B. McBratney, Raul Roberto Poppiel, Jorge Tadeu Fim Rosas, Merilyn T. Accorsi Amorim, Nicolas Francos and José A. M. Demattê

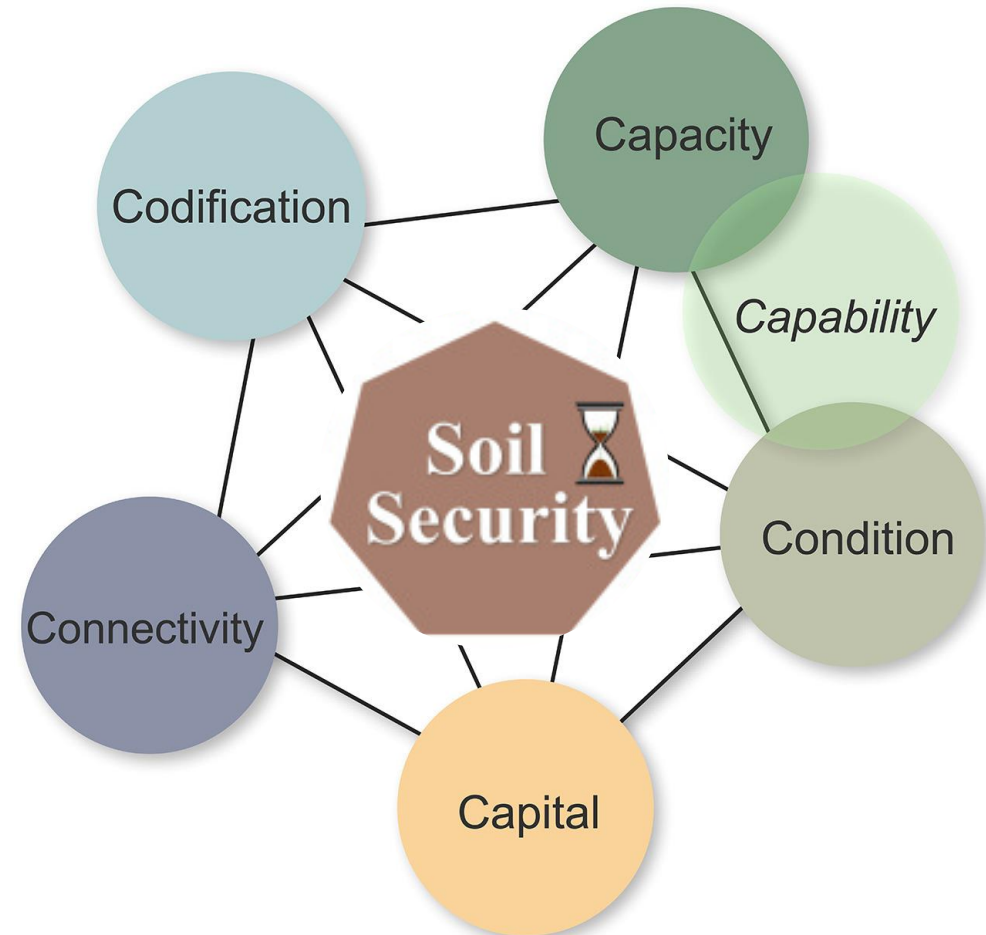

ESALQ

September 25-28, 2024
Nanjing, China

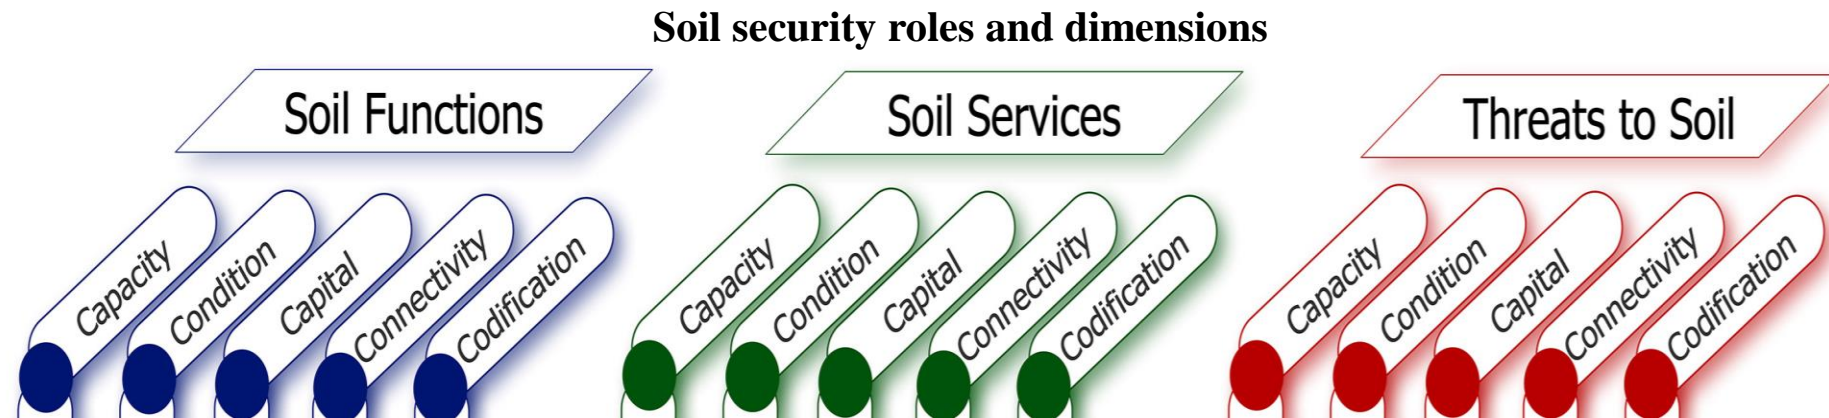

Introduction

Source: Evangelista et al. (2024)

Introduction

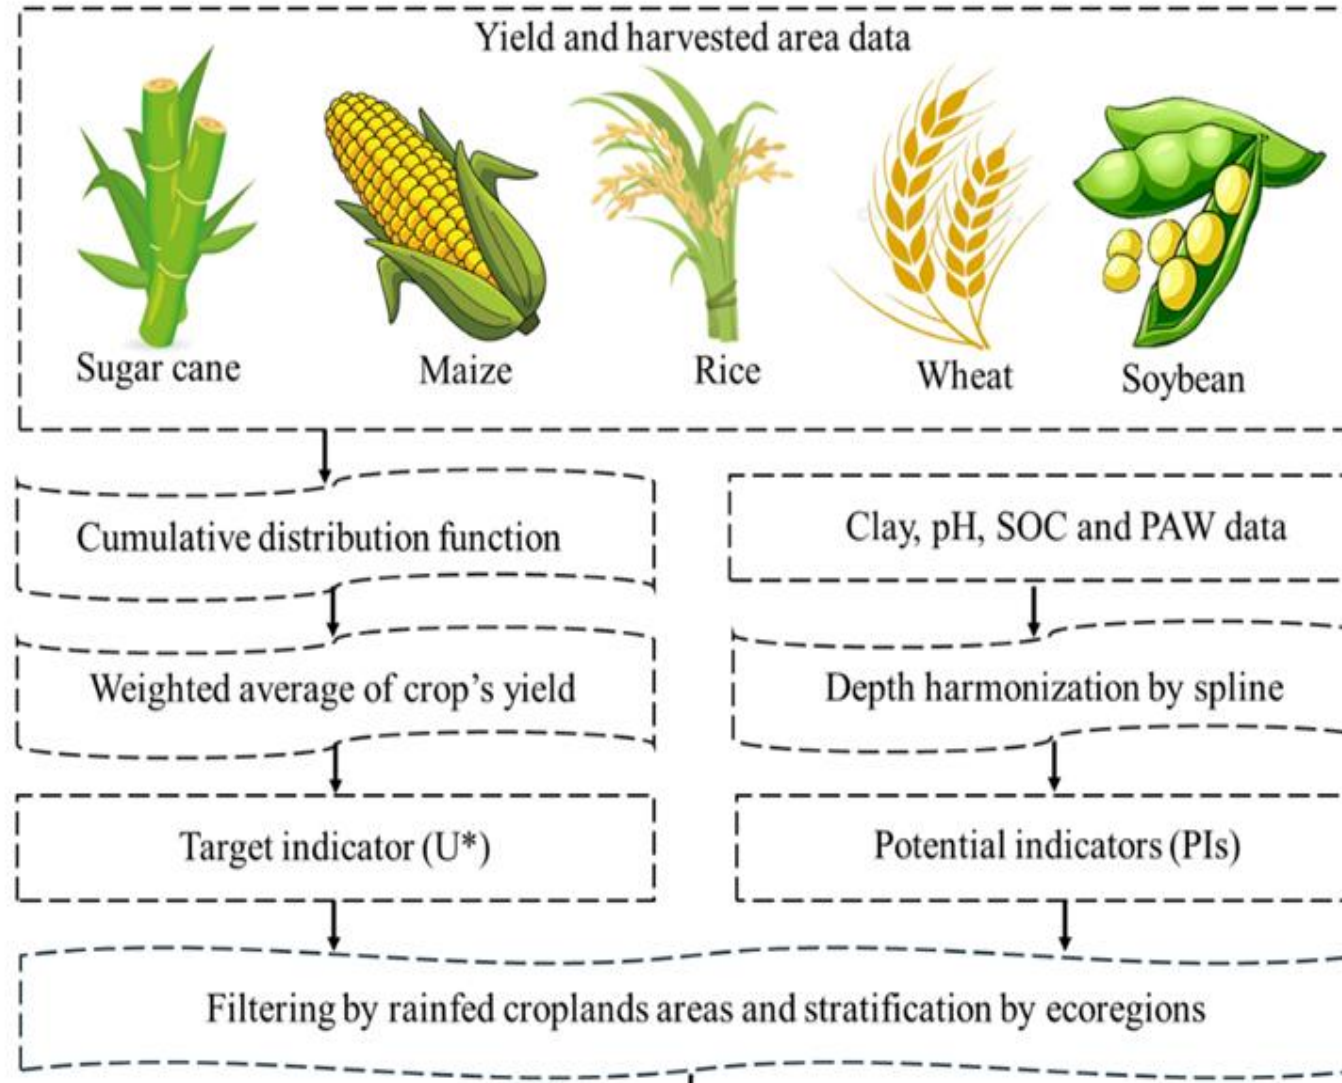

Source: Evangelista et al. (2024)

Objective: To assess the relationship between crop's yield and soil attributes (in surface and subsoil layers) across the world's ecoregions and to map the soil capacity to produce food and biomass worldwide with a soil security assessment framework (SSAF)

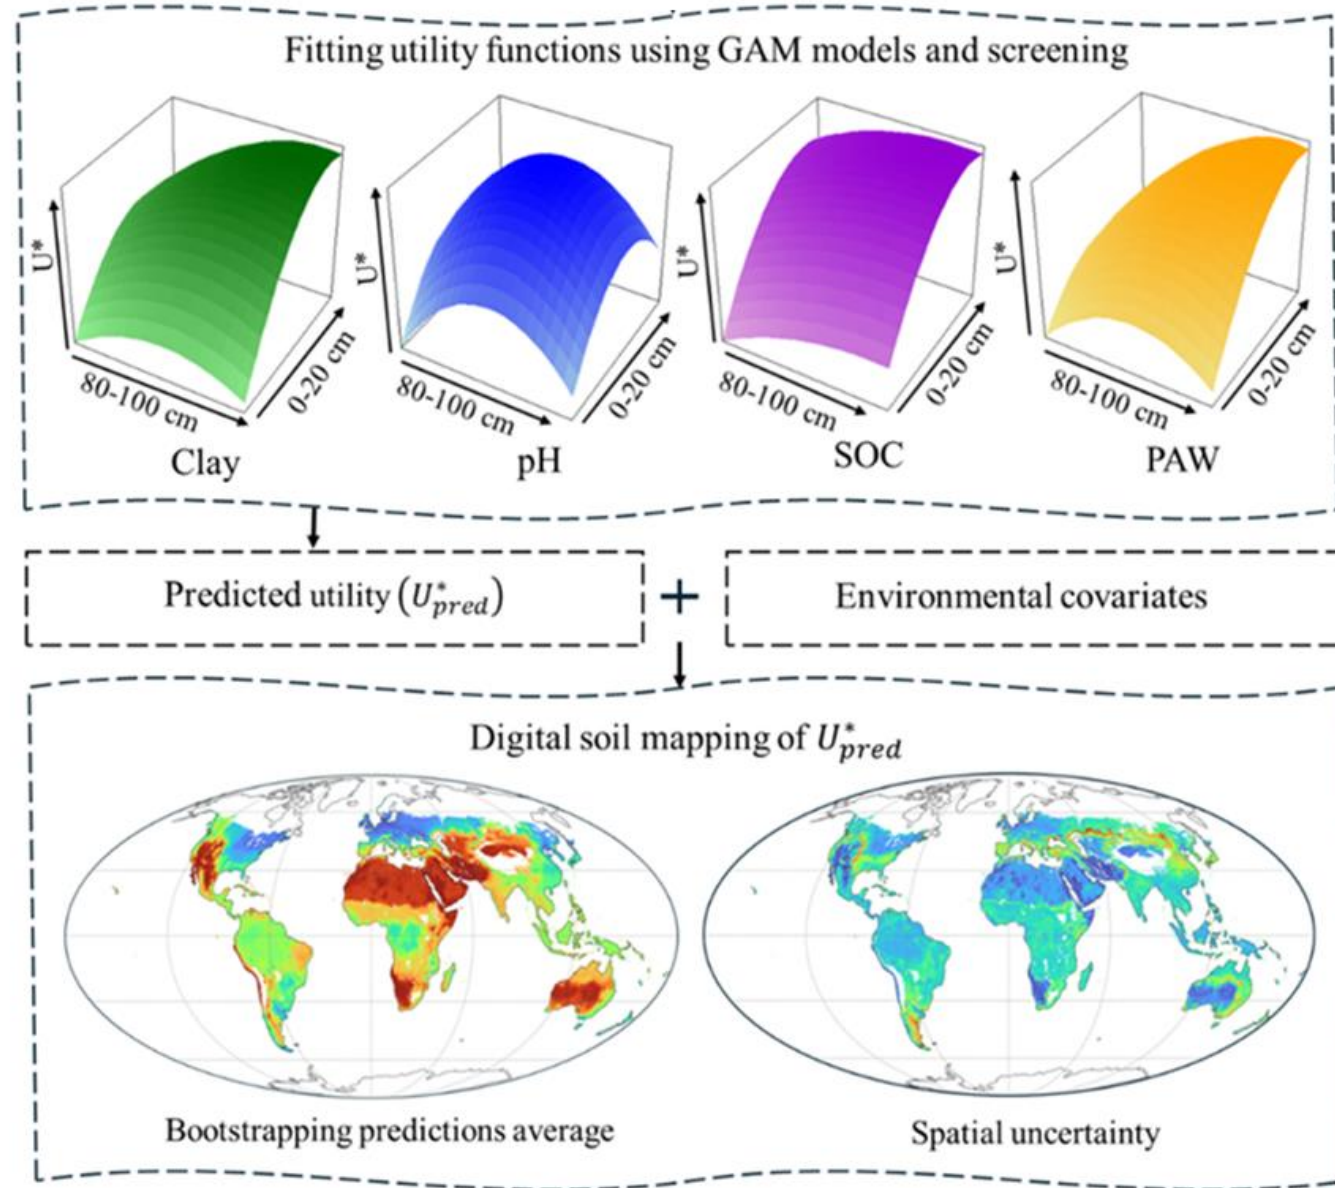

Material and Methods

Data obtention, scoring and filtering

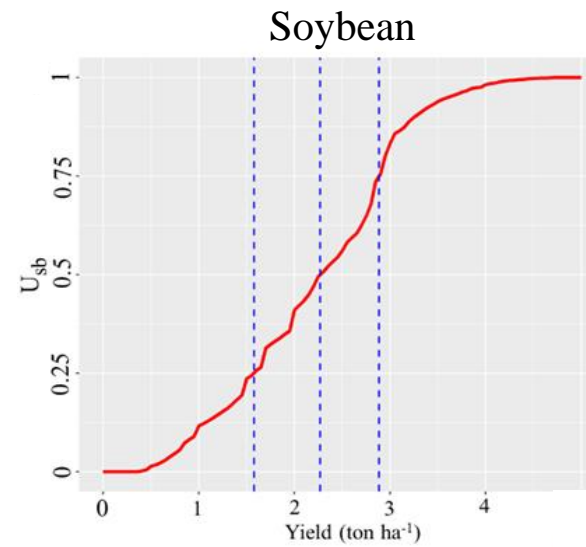

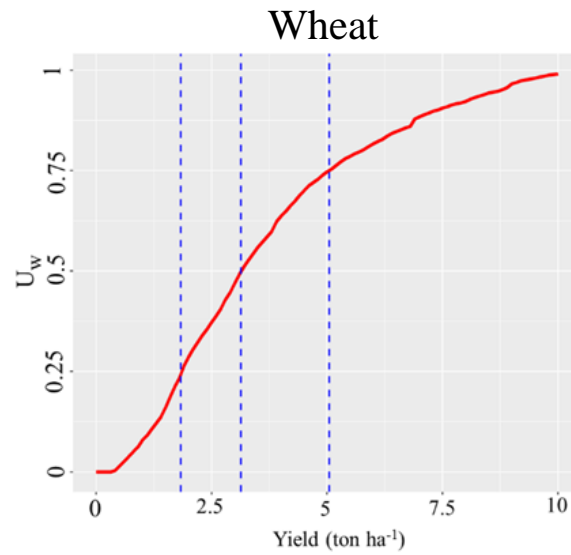

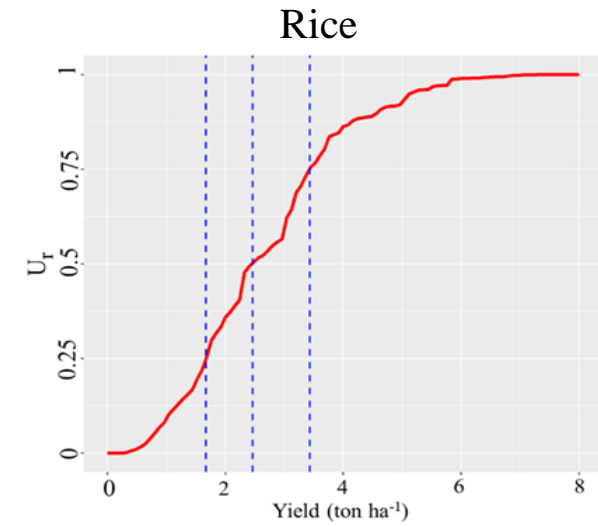

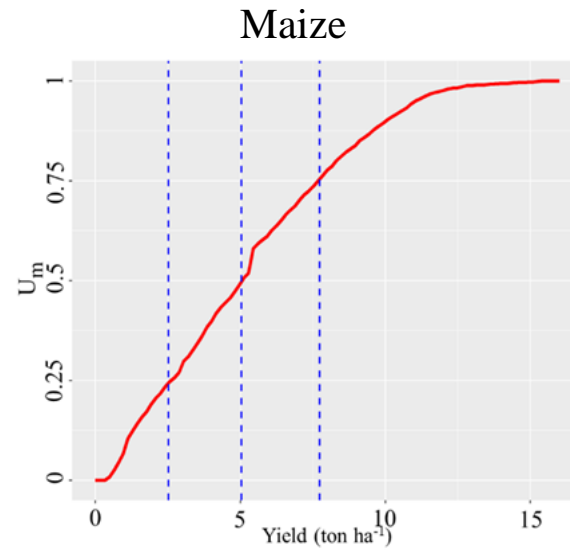

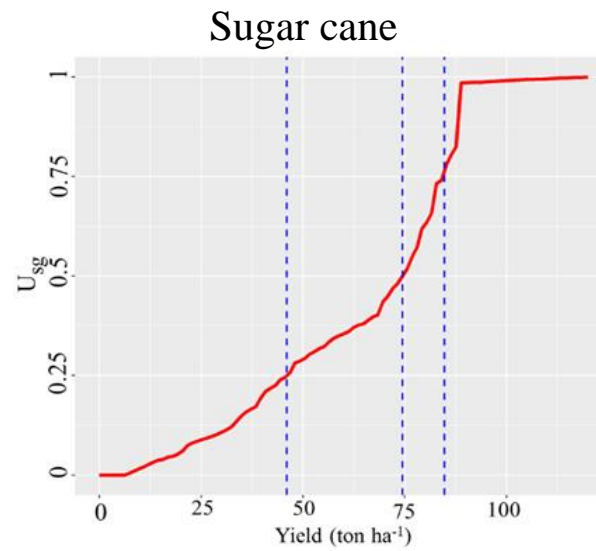

Material and Methods

Utility function fitting and Digital Soil Mapping

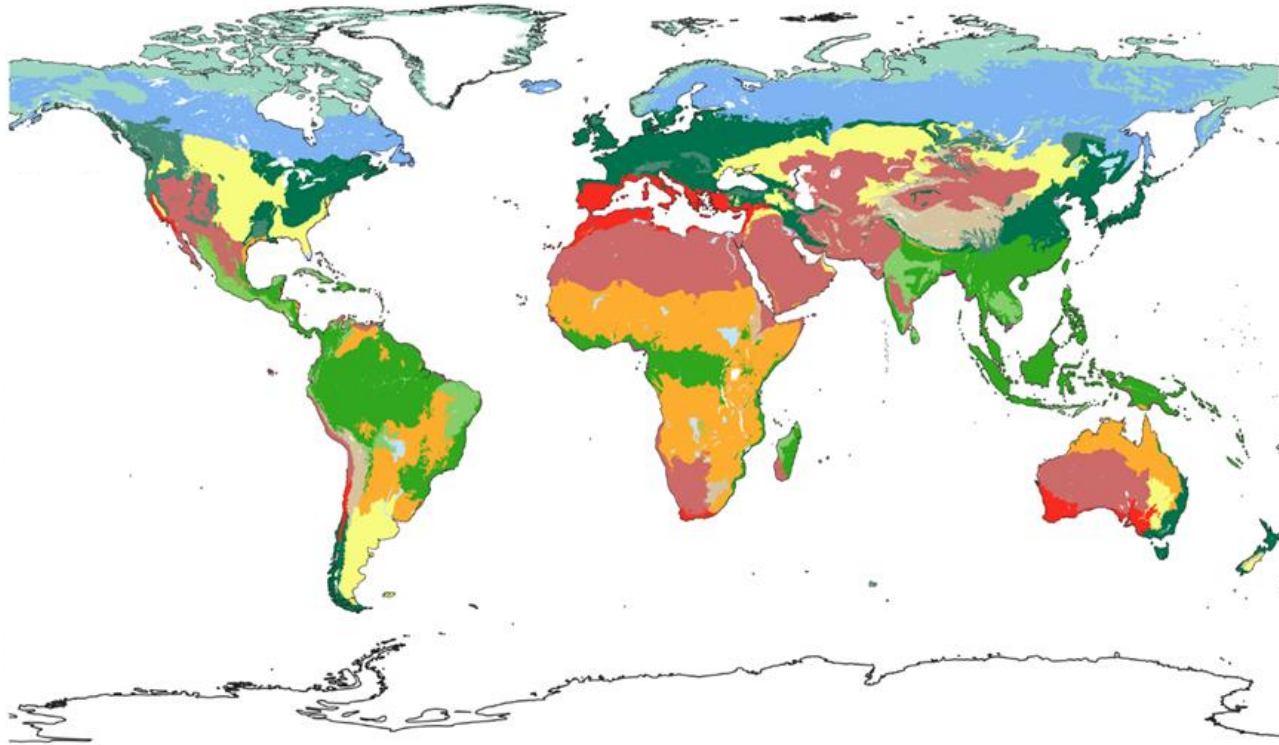

Results

Scored yield data

Results

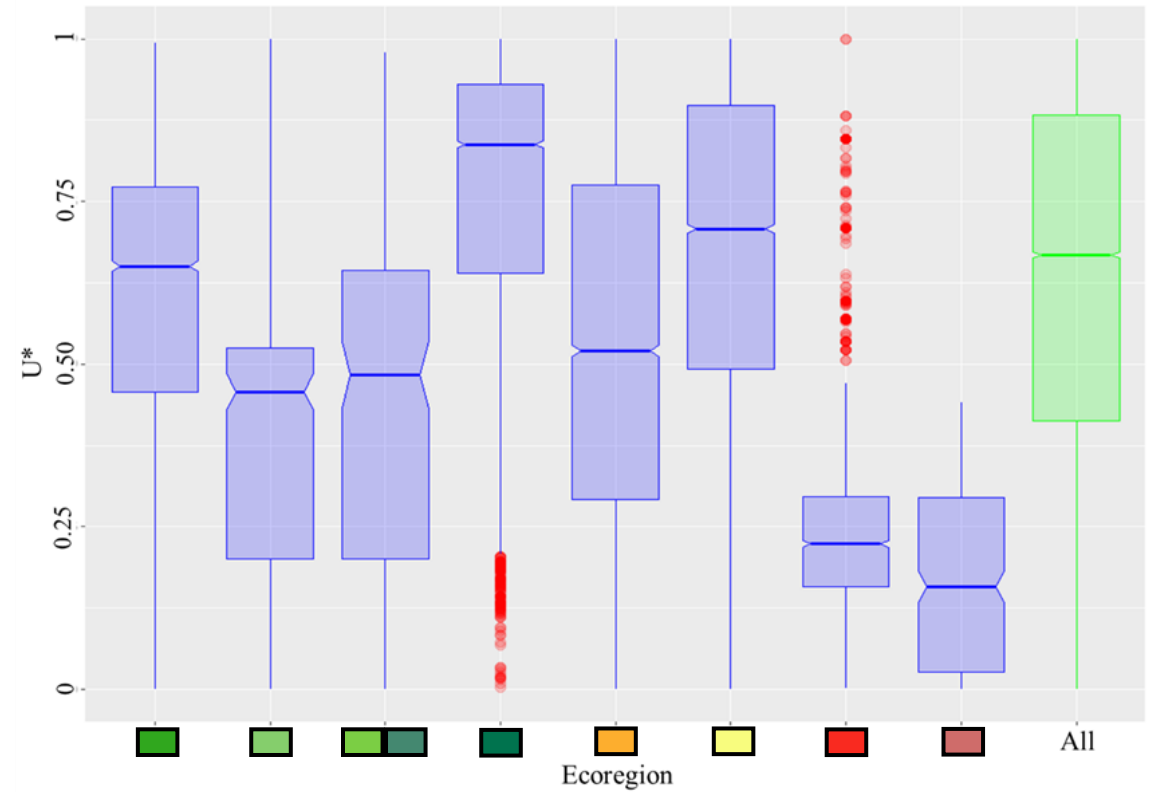

Data stratification by ecoregion

- Tropical and subtropical moist broadleaf forests
- Tropical and subtropical dry broadleaf forests
- Tropical and subtropical coniferous forests
- Temperate broadleaf and mixed forests
- Temperate coniferous forests

- Boreal forests or taiga
- Tropical and subtropical grasslands, savannas, and shrublands
- Temperate grasslands, savannas, and shrublands
- Flooded Grasslands and Savannas
- Montane grasslands and shrublands

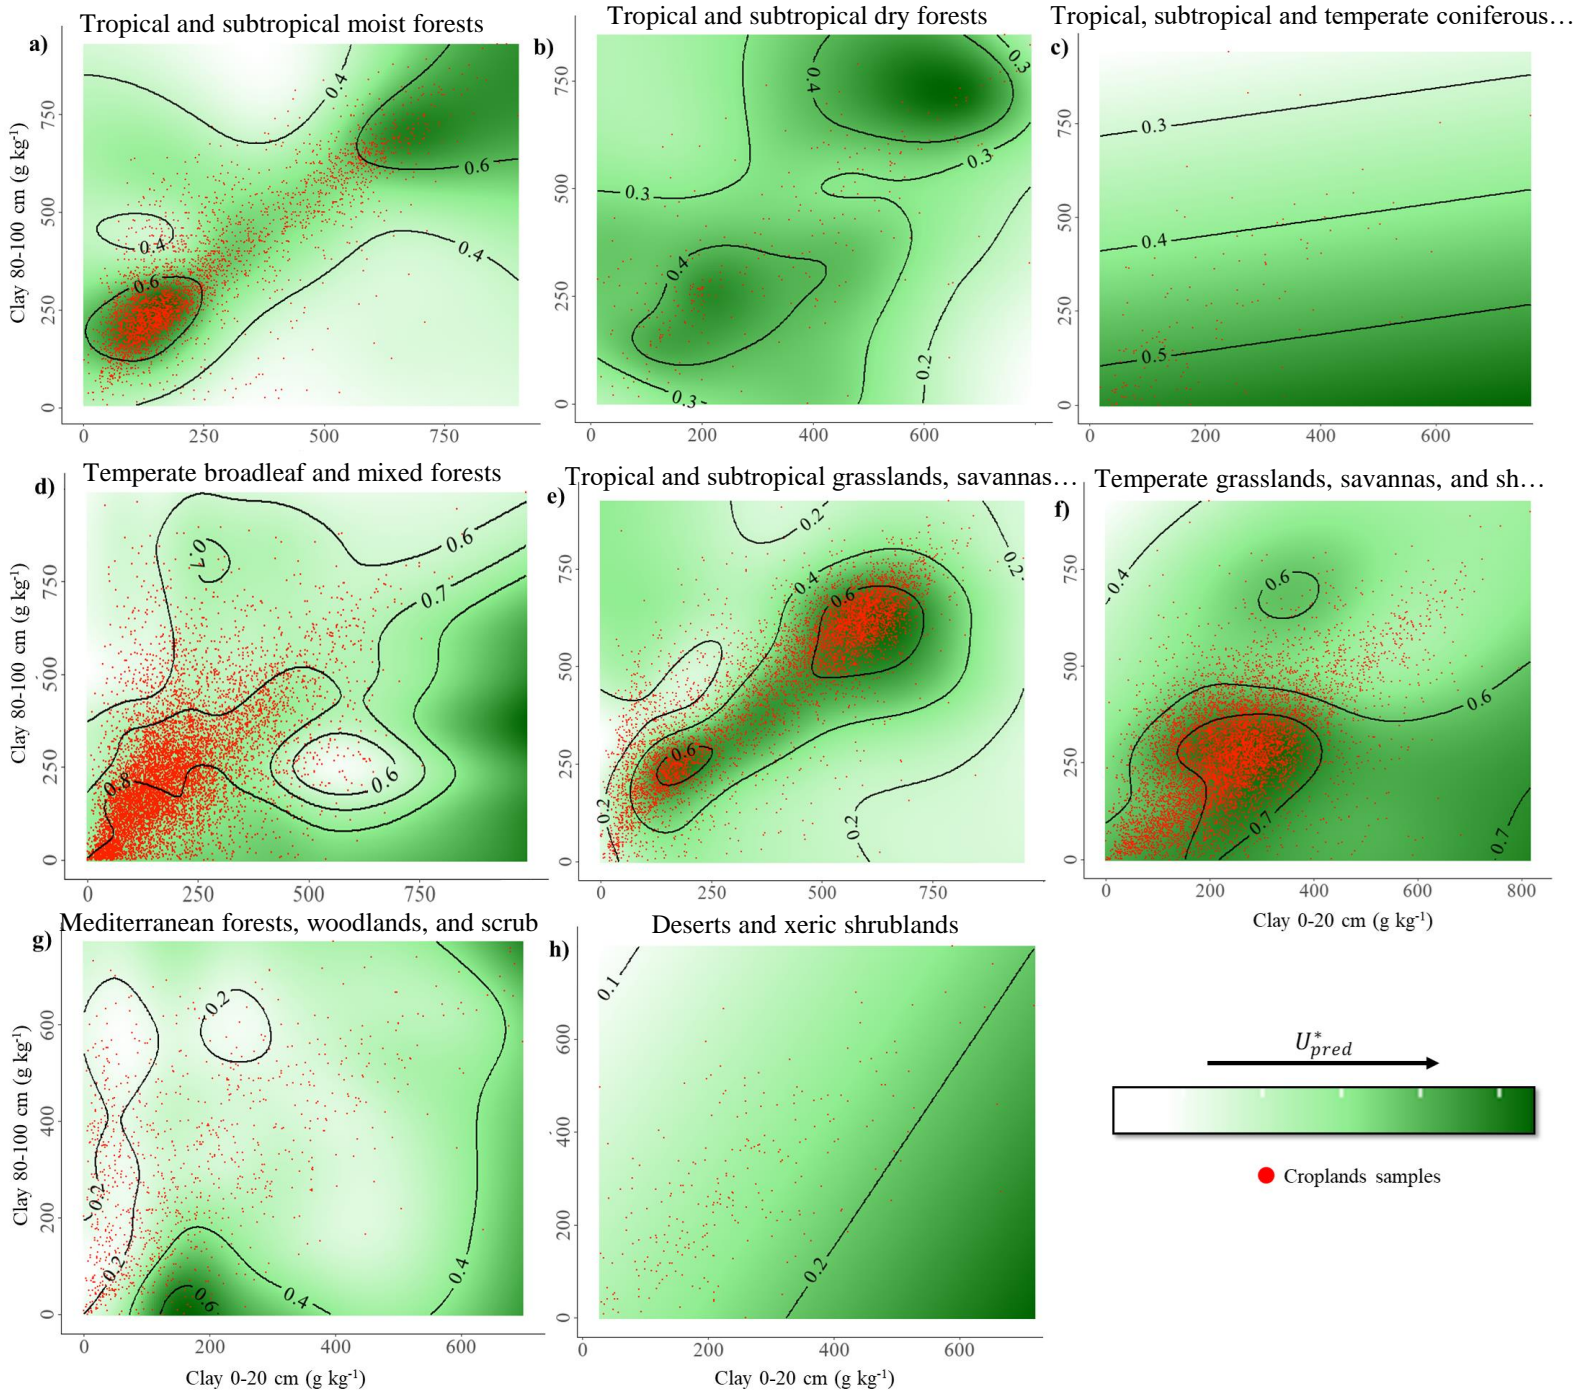

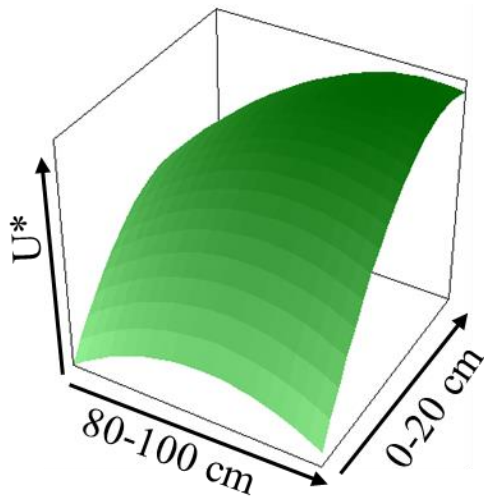

- Tundra
- Mediterranean forests, woodlands, and scrub
- Deserts and xeric shrublands
- Mangroves

Results

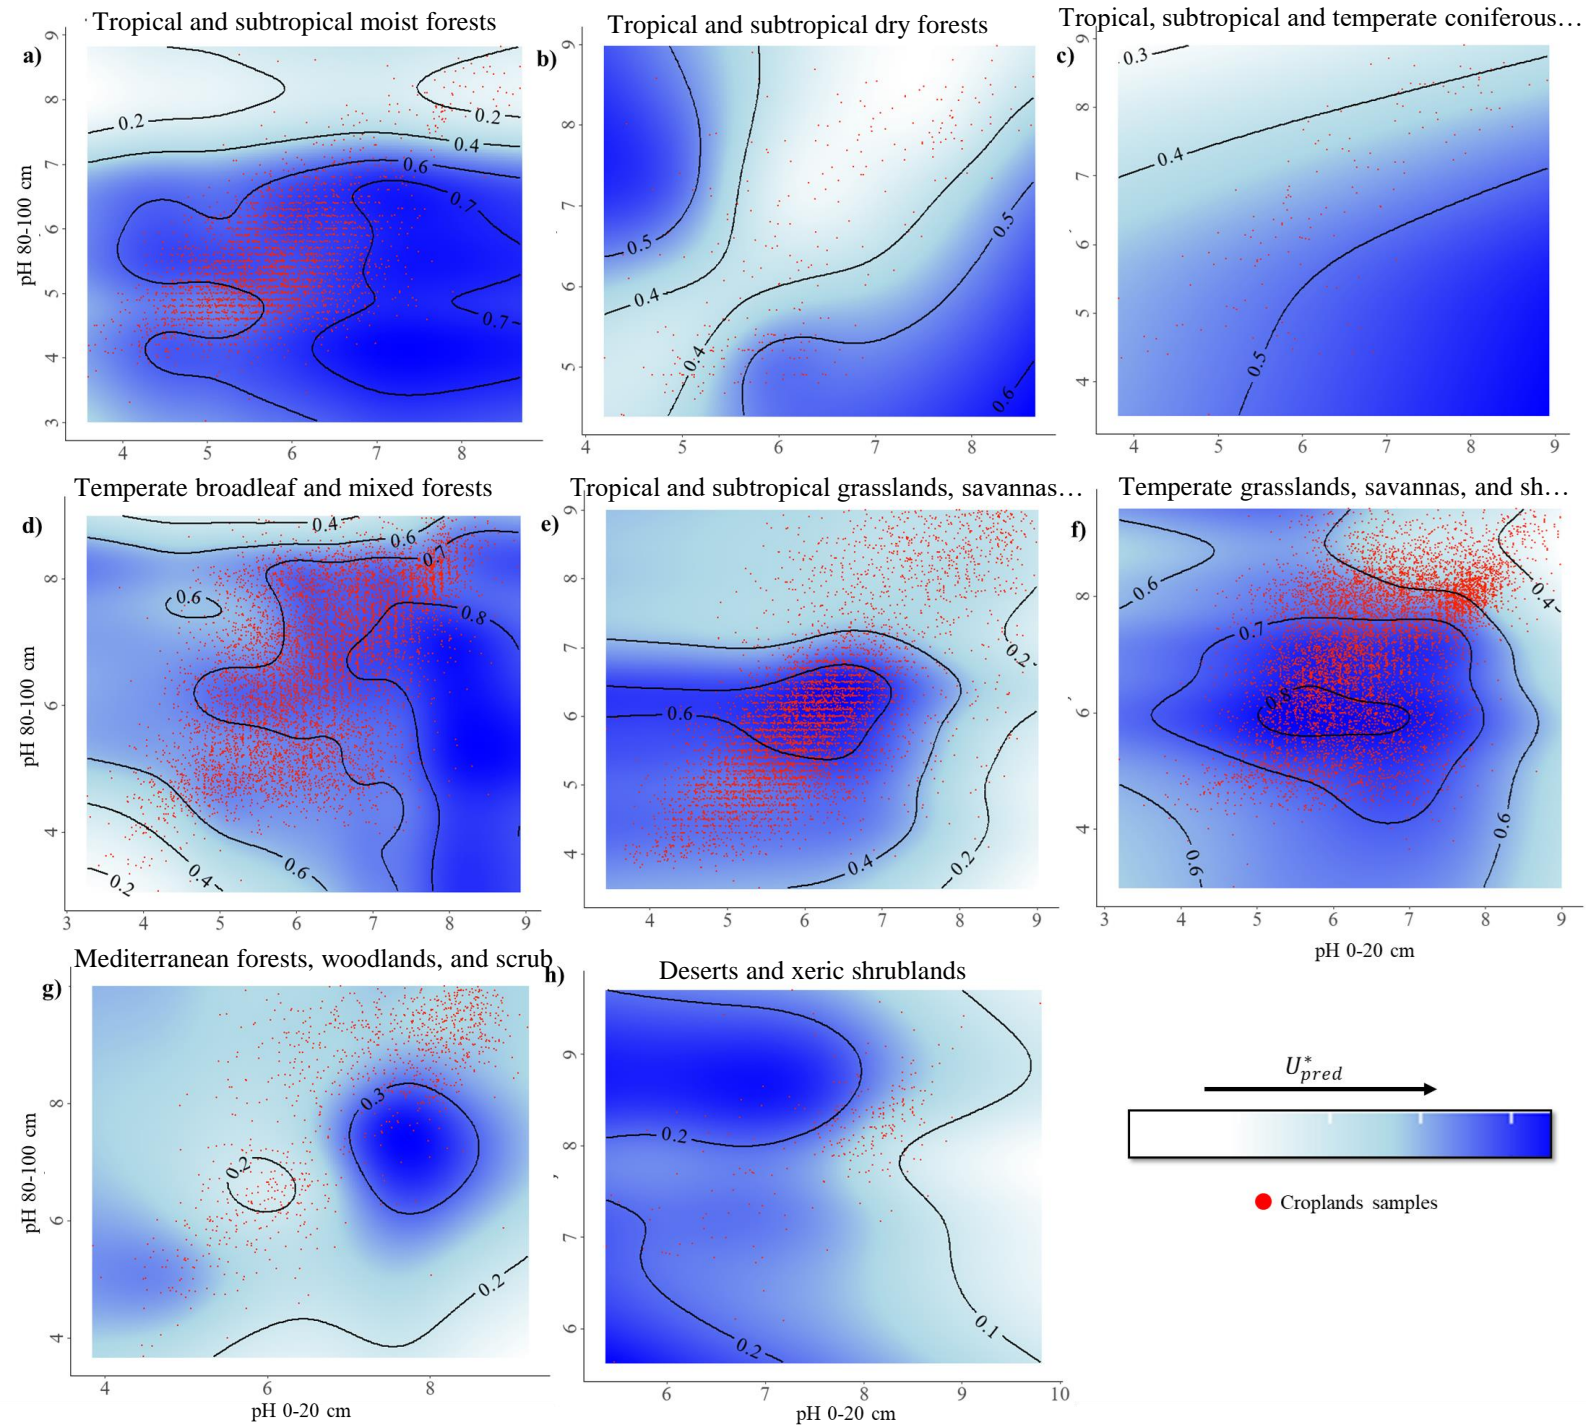

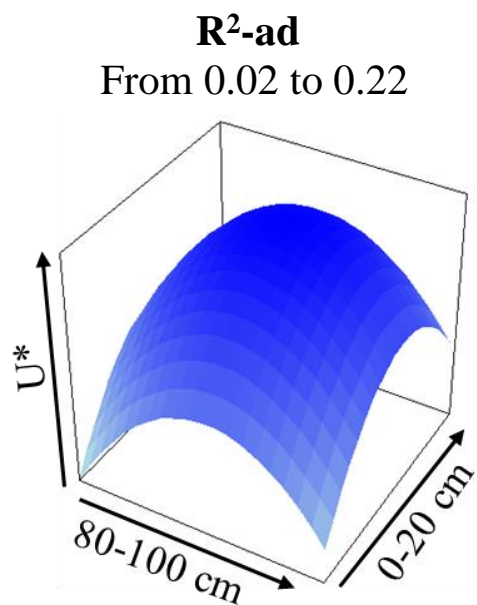

Utility function fitting: Clay

R²-ad
From 0.01 to 0.30

Results

Utility function fitting: pH

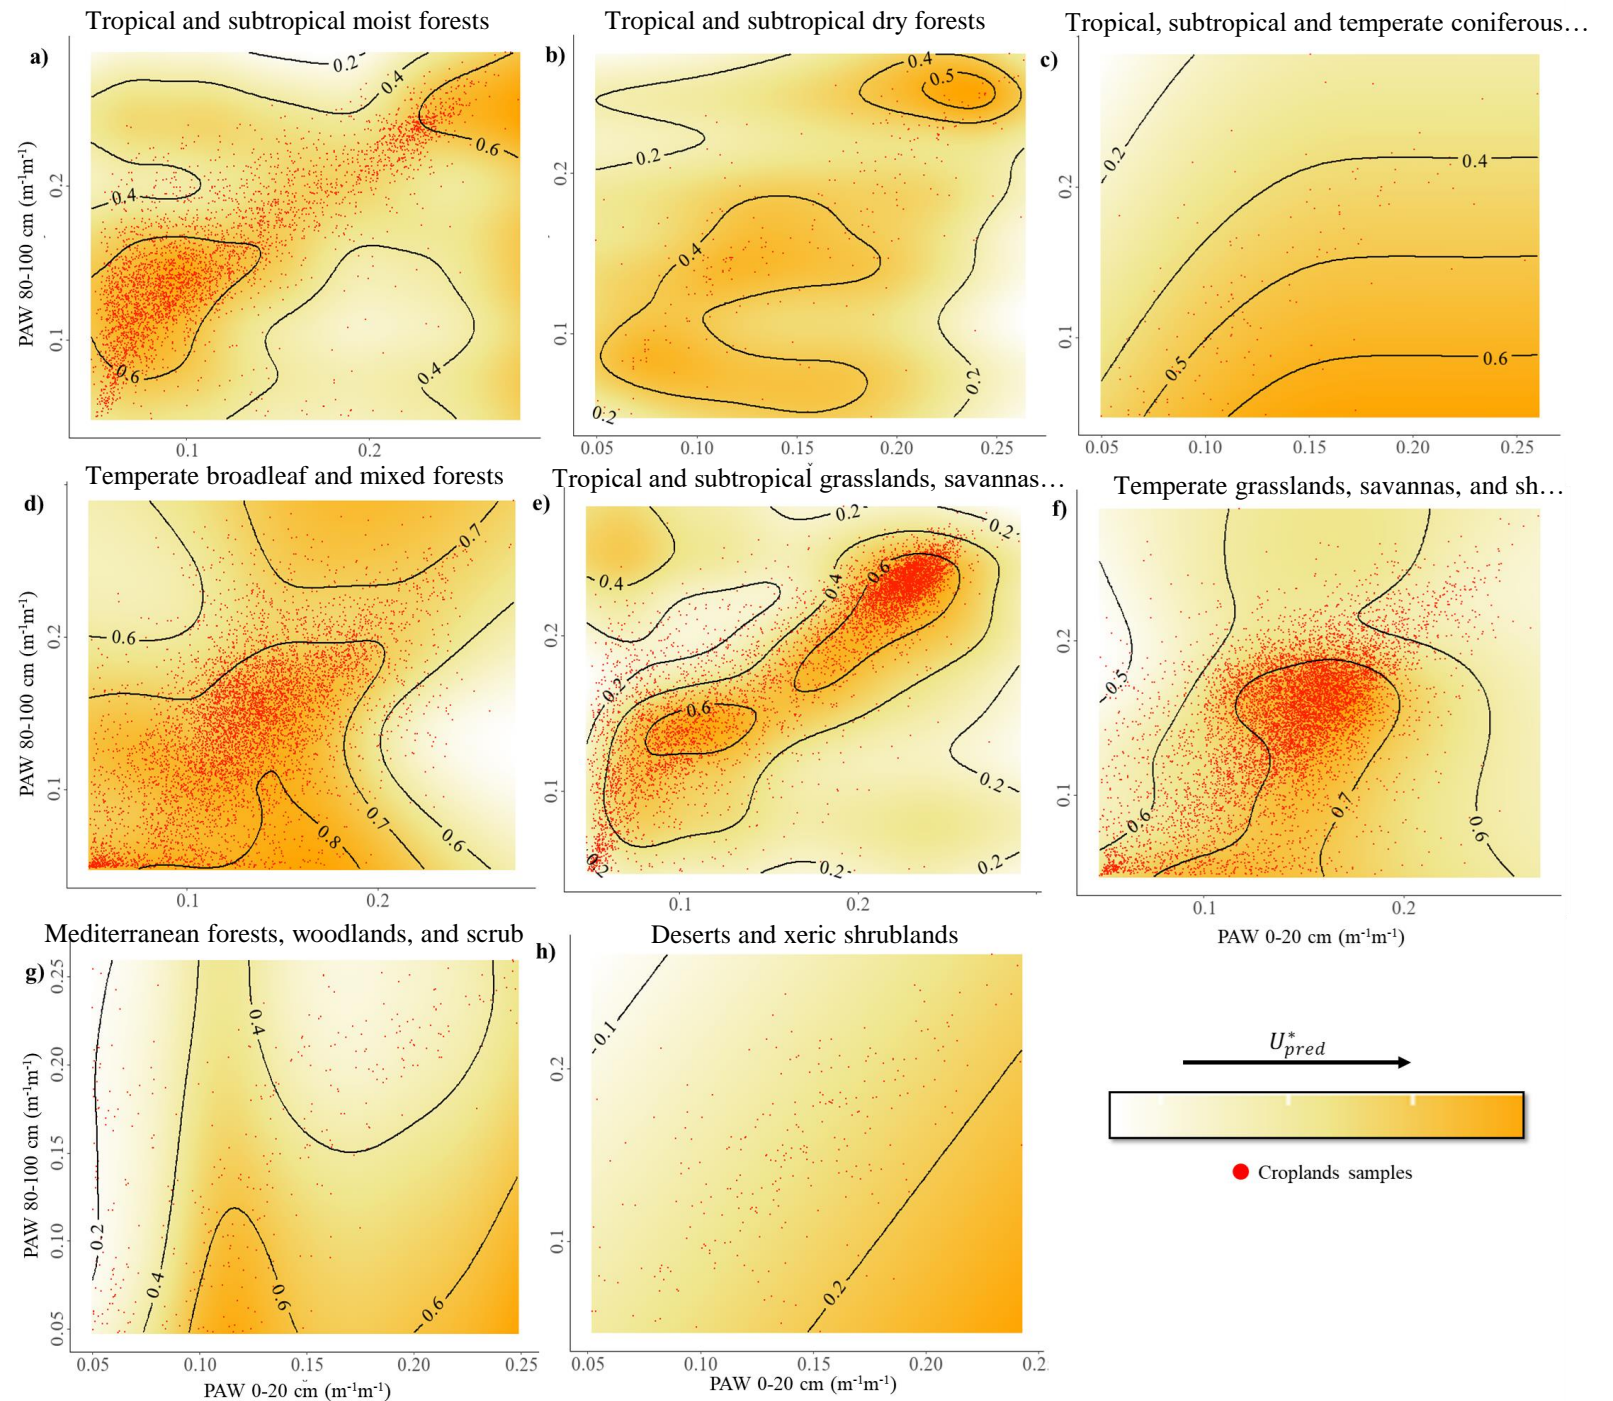

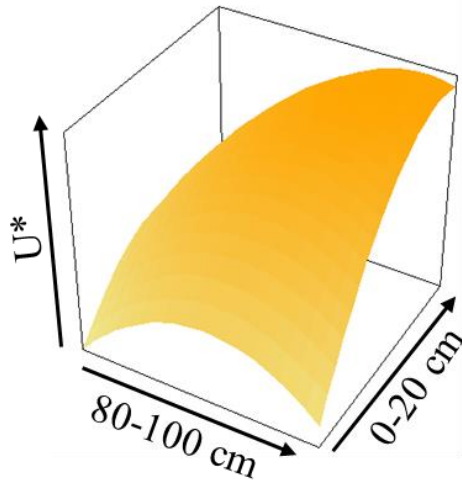

Results

Utility function fitting: PAW

$R^2\text{-ad}$

From 0.01 to 0.36

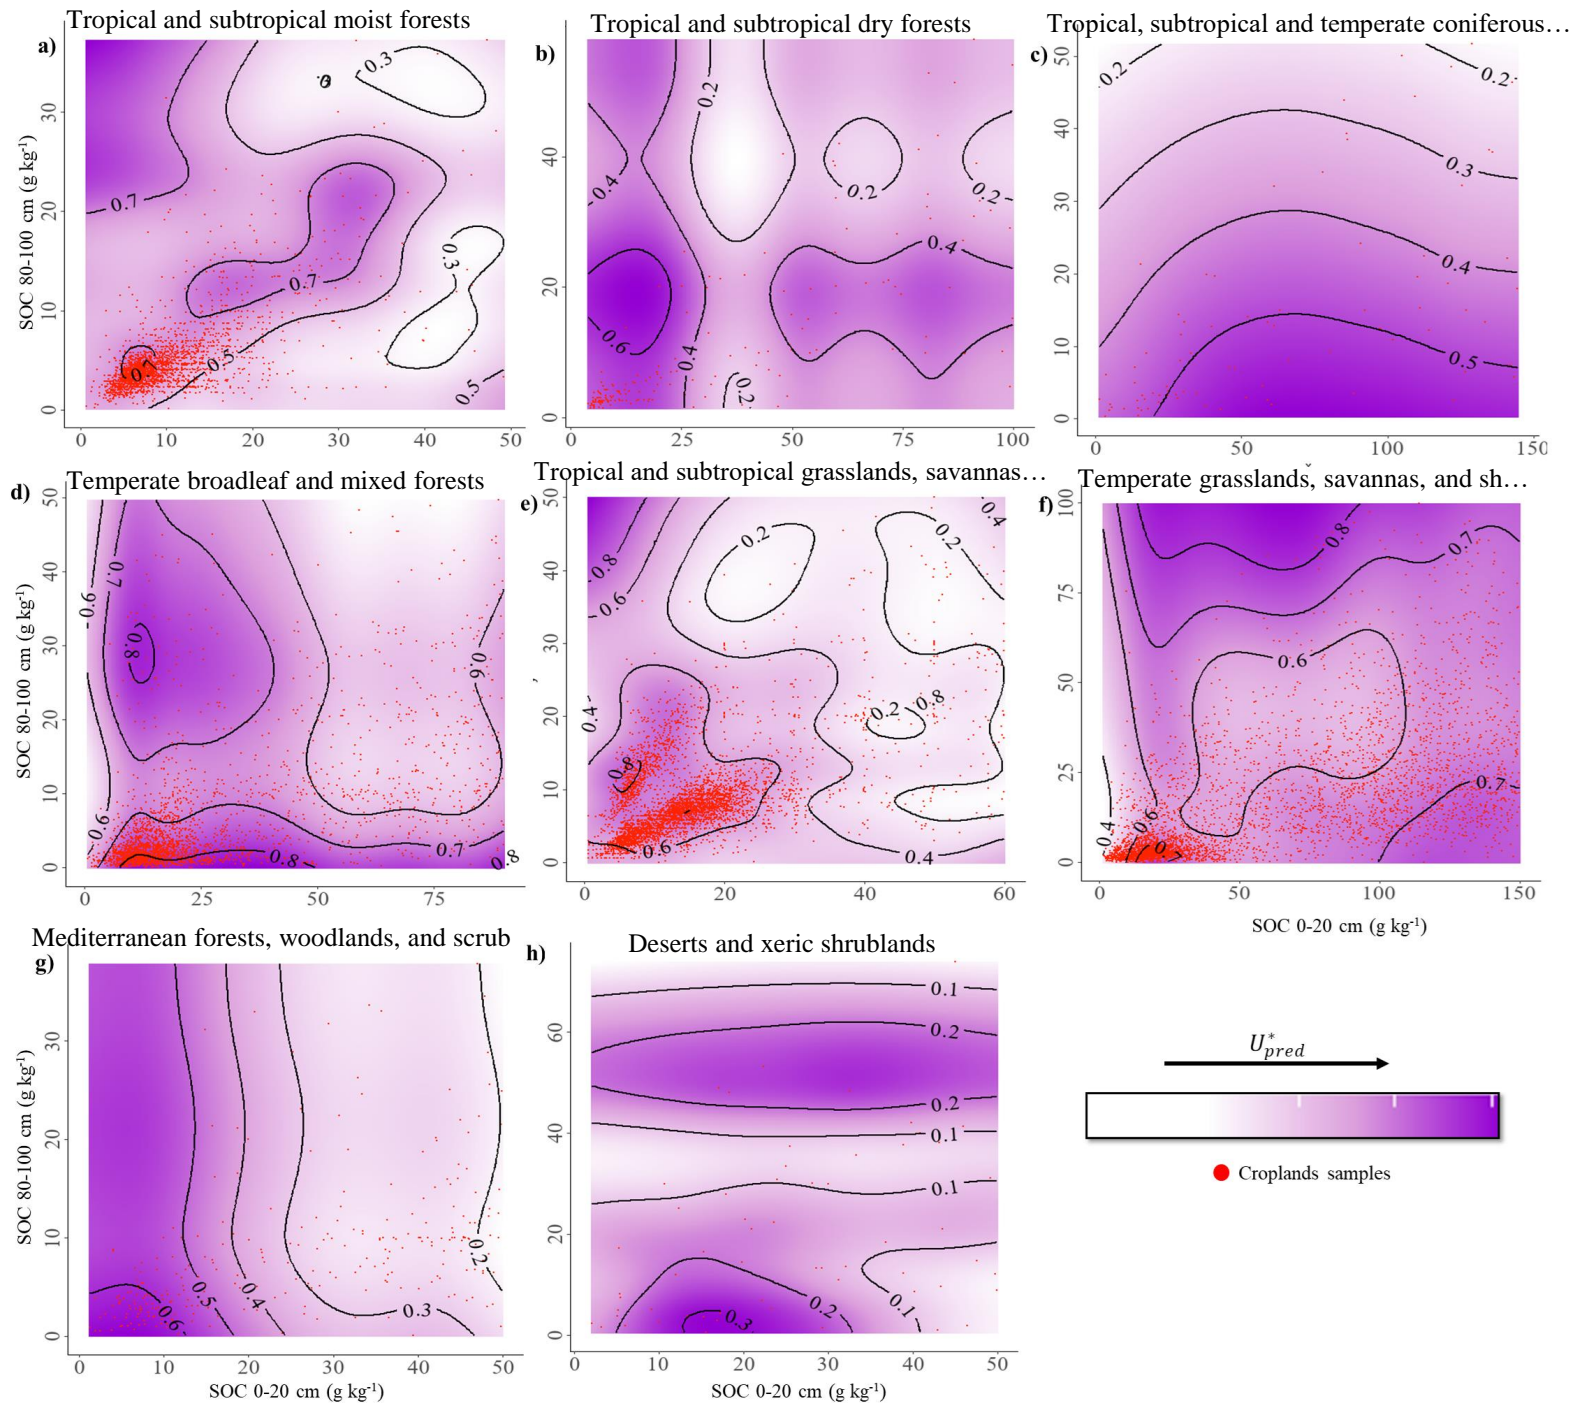

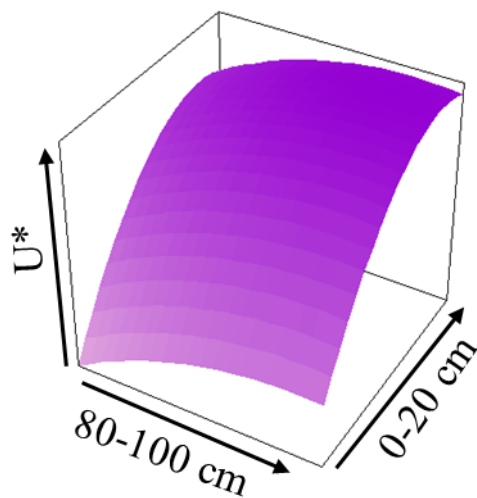

Results

Utility function fitting: SOC

R^2 -ad

From 0.09 to 0.46

Results

GAM model with all soil attributes statistics

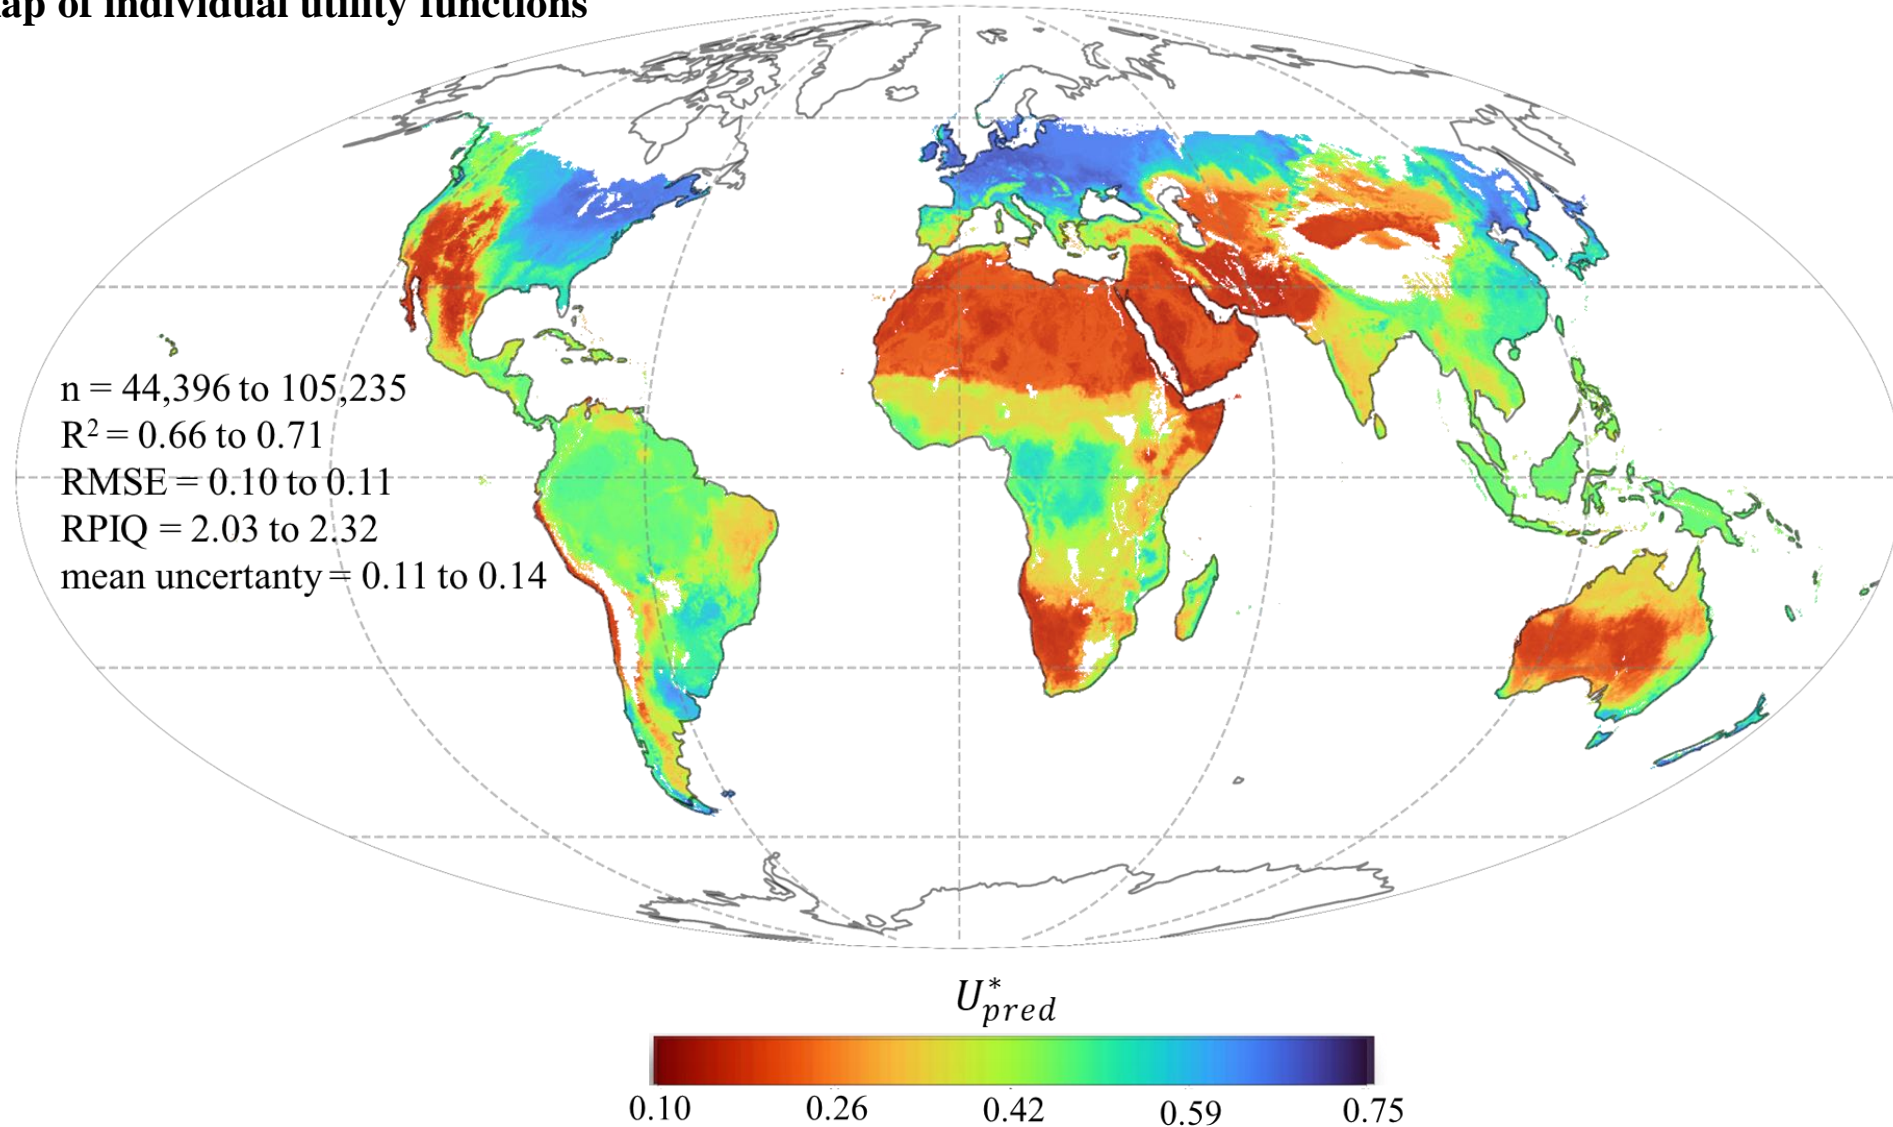

Ecoregion	0-20 layer			Both layers		
	n	a-R ²	RMSE	n	a-R ²	RMSE
Tropical and subtropical moist broadleaf forests	3,084	0.20	0.17	3,010	0.28	0.16
Tropical and subtropical dry broadleaf forests	188	0.39	0.14	155	0.59	0.10
Tropical, subtropical, and temperate coniferous forests	115	0.12	0.23	58	0.59	0.14
Temperate broadleaf and mixed forests	6,872	0.15	0.20	1,177	0.20	0.16
Tropical and subtropical grasslands, savannas, and shrublands	4,600	0.52	0.17	4,302	0.49	0.16
Temperate grasslands, savannas, and shrublands	4,062	0.23	0.20	2,967	0.26	0.15
Mediterranean forests, woodlands, and scrub	45	0.40	0.11	38	0.42	0.09
Deserts and xeric shrublands	76	0.17	0.11	40	0.66	0.05

R²-ad (0-20 cm)
From 0.15 to 0.40

R²-ad (both layers)
From 0.20 to 0.66

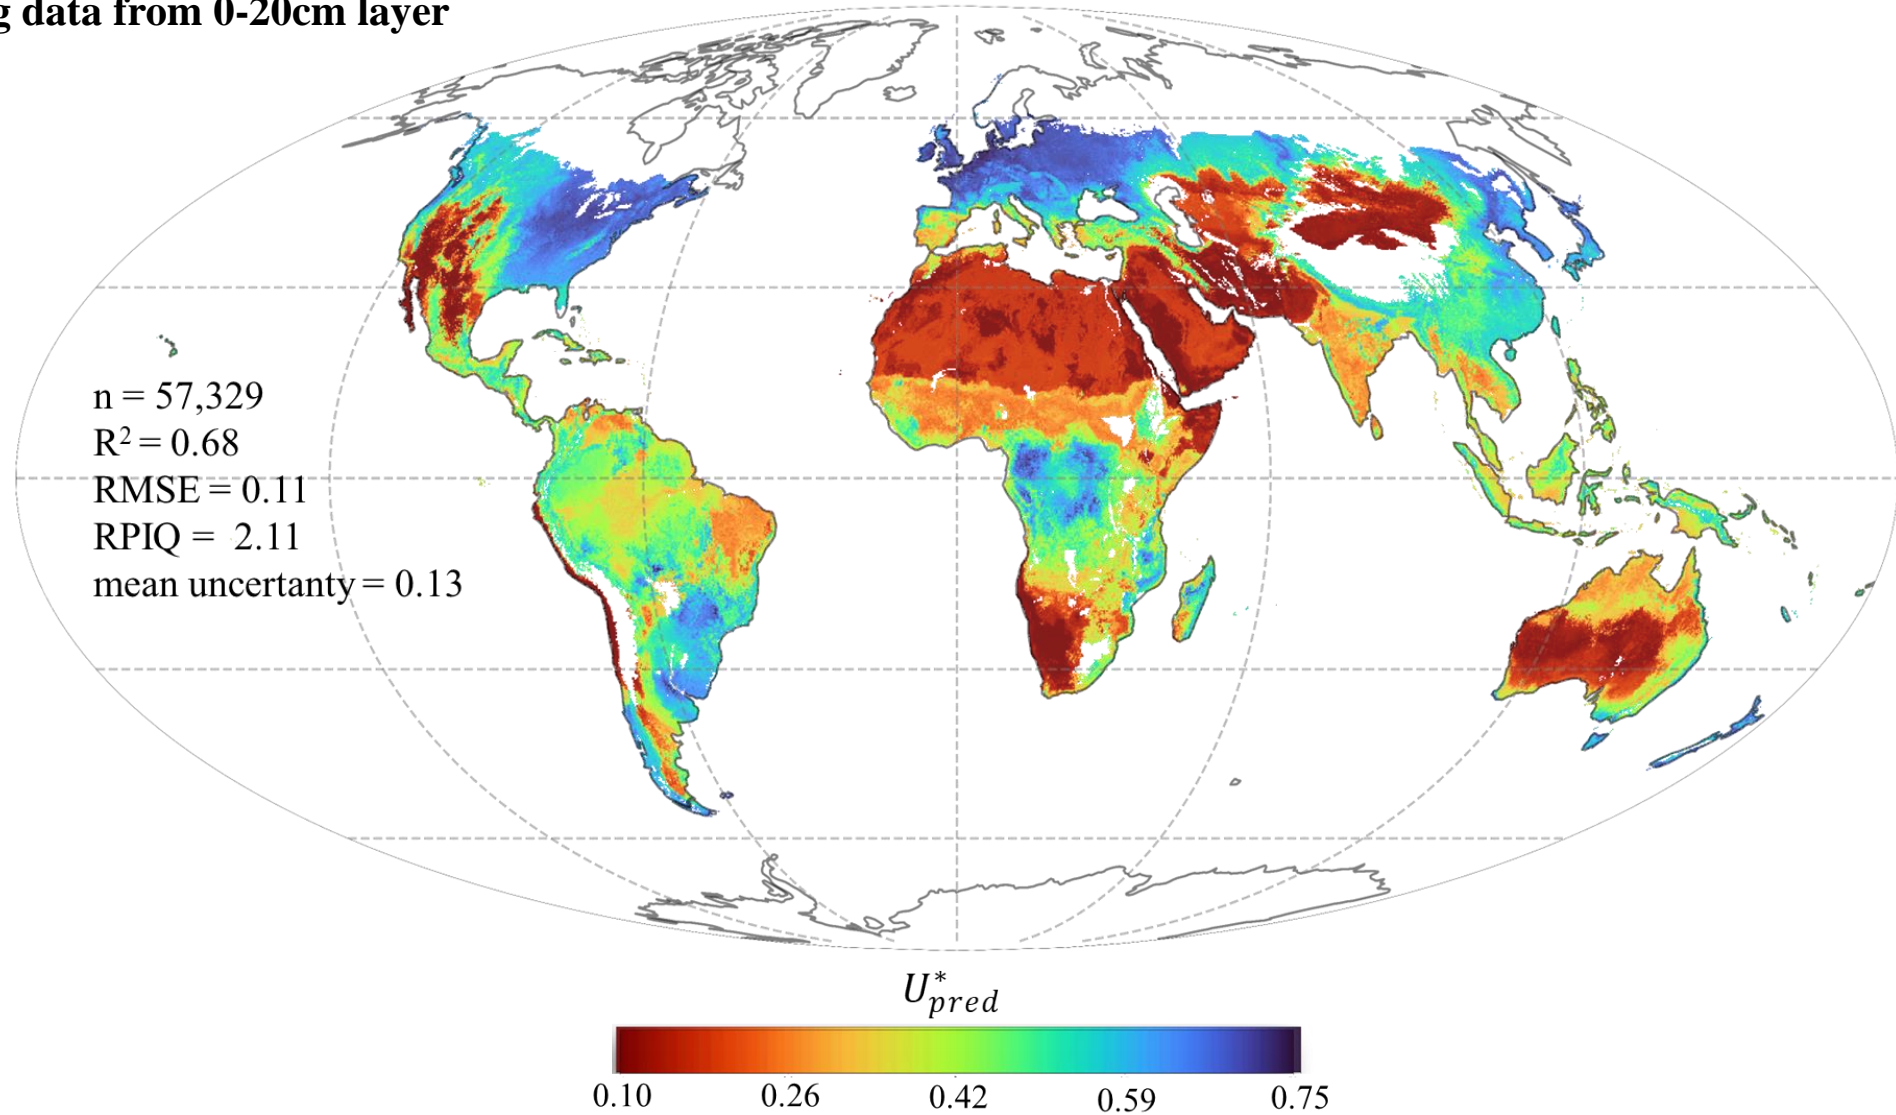

Results

Mean map of individual utility functions

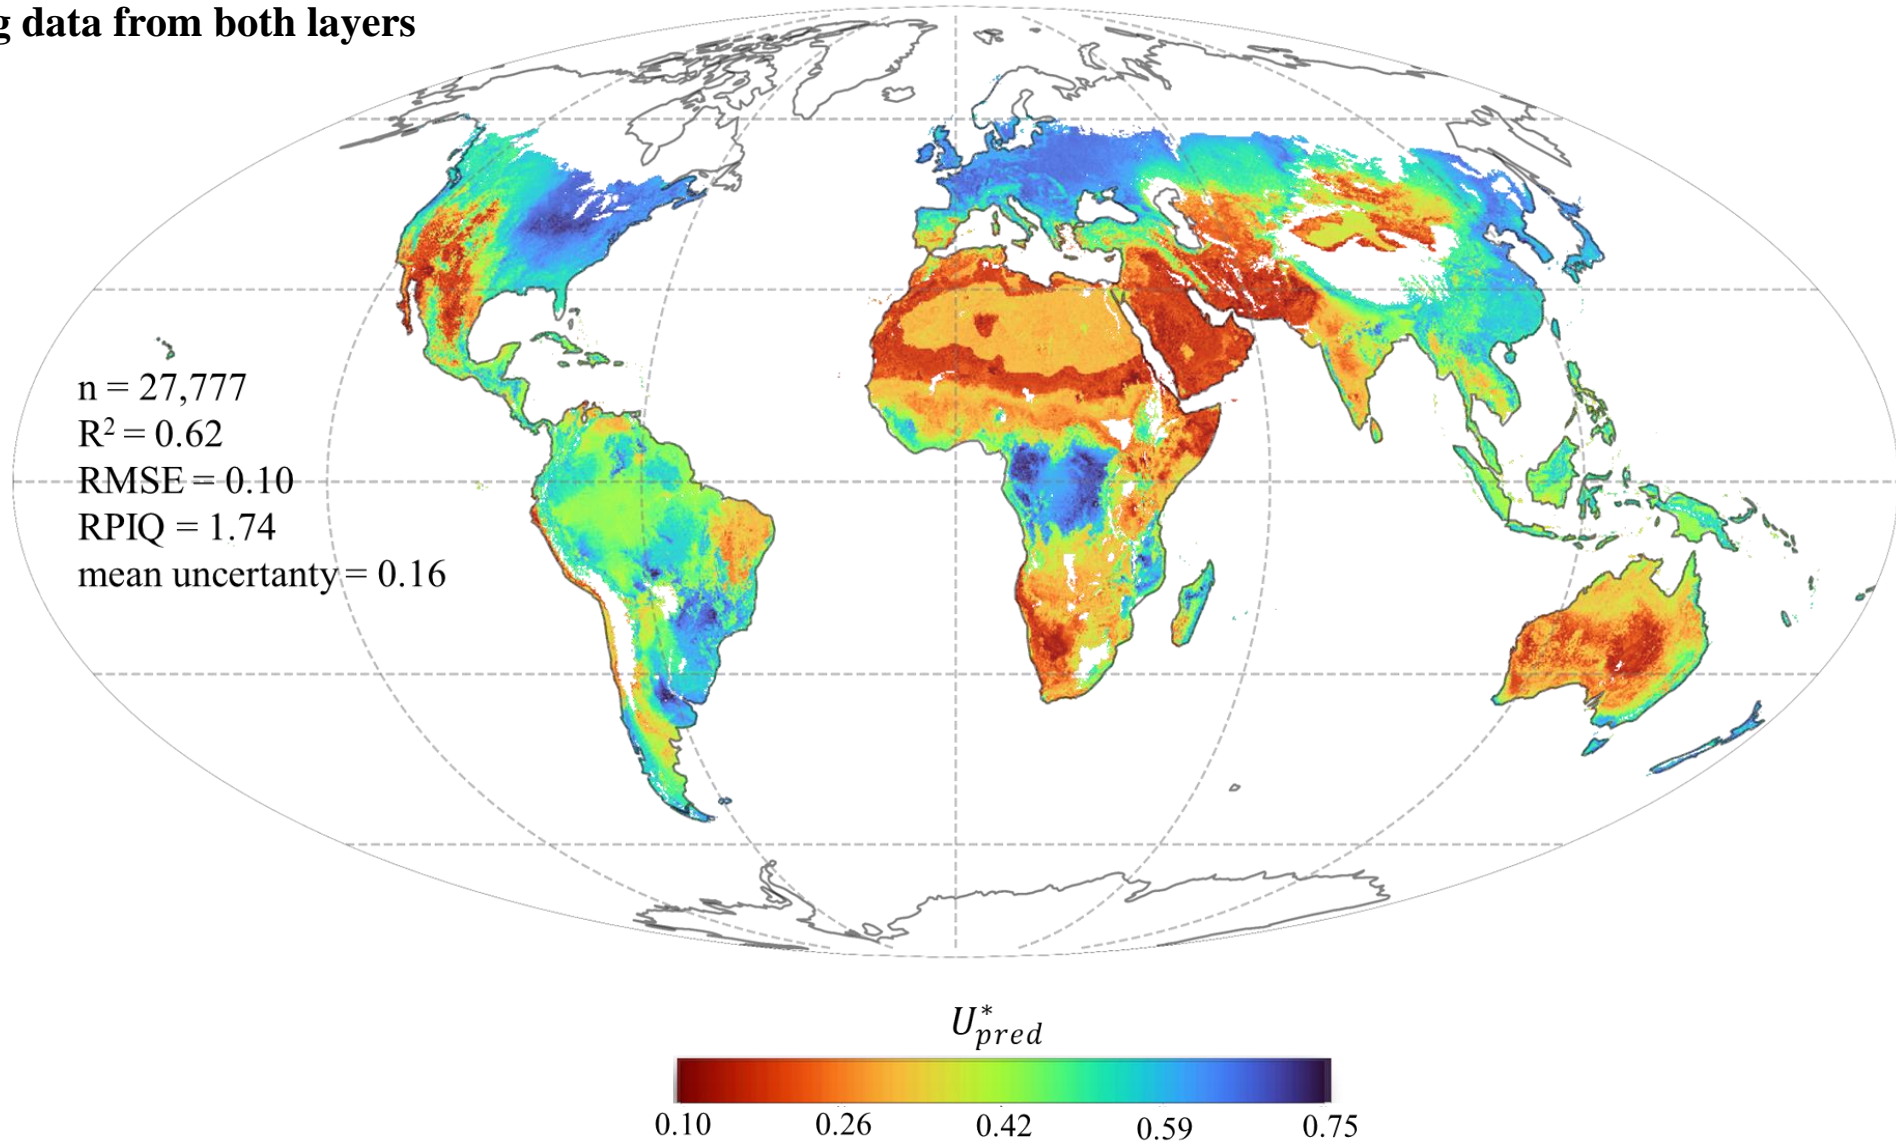

Results

Map using data from 0-20cm layer

Results

Map using data from both layers

Final Considerations

We assessed how the soil attributes drive the food and biomass production across world's ecoregions and its spatial distribution by high resolution mapping;

We used bivariate utility function in SSAF for the first time;

We showed the importance of subsoil attributes for crops production;

The main limitation is related to accuracy of utility functions and the interference of non soil factors in its behavior;
