Country participation

FAO 2018

Table 1 Global distributions of saline and sodic soils

Continent	Area (million hectares)		
	Saline	Sodic	Total
Africa	412,2	208,0	620,2
Asia	378,6	236,8	615,3
Europe	19,6	57,7	77,3
Latin America	94,5	78,9	173,4
North America	36,6	56,7	93,4
Oceania	5,5	106,7	112,2

National estimates based on the best available information

Estado actual de la degradación de suelos por salinización

11,7 % de los suelos de Colombia presentan algún grado de salinización
(13.241.995 ha)

Grado	Área (ha)	%
Muy Ligero	98.566.941	86,4
Ligero	3.147.320	2,8
Moderado	8.421.500	7,4
Severo	531.124	0,5
Muy Severo	1.142.051	1,0

A stylized illustration of a landscape. The background is a solid light blue. In the foreground, there is a dark brown horizontal band representing the ground. Below this band is a reddish-brown band. Scattered across these bands are several white, pill-shaped or oval objects. Five stylized trees with olive-green, teardrop-shaped leaves and thin brown trunks are positioned across the dark brown band. The text 'International Network of Salt-Affected Soils (INSAS)' is written in white, bold, sans-serif font, slanted upwards from left to right, positioned over the reddish-brown band.
