# INSOILFER Working Group Meetings

The importance of soil monitoring and connection to  
mapping

27-29  
November  
2023

**Luis Rodríguez-Lado, PhD**

**Global Soil Nutrient and Soil Nutrient Budget Maps  
(GSNmap)**

Soil Information and Data Team  
GSP-Secretariat  
Land and Water Division

**Insoilfer**  
International Network on  
Soil Fertility and Fertilizers

### GSOIL4N

- Develop **country-driven global soil nutrient and nutrient budget maps.**
- **Map and monitor soil fertility** in a broader perspective by also considering the physical, chemical, and biological soil properties.
- Support countries with capacity development for conducting **soil nutrient budget maps** and **national soil information and monitoring systems.**
- Advocate for a **global approach** to facilitate the collation and availability of soil fertility data and information.
- Adopt a **holistic approach** that considers all aspects of soil nutrient inputs and outputs.

- **Global Soil Nutrient and Nutrient Budget Maps (GSNmap)** is a initiative of INSII and the GSP with the intent of developing **current state maps of nutrients (NPK)** and their budgets.
- Based on **country-driven** approach
- **Phase I:** maps of soil nutrient and soil fertility properties
- **Phase II:** NPK budget maps

### The challenge of nutrient balance

A judicious use and management of fertilizers... is essential to soil health and food security

**Nutrient-depleted soils**

- Plant nutrient deficiencies
- Less nutritious food
- Low yields Crop failure
- Human and animal nutrient deficiencies

**Nutrient-overloaded soils**

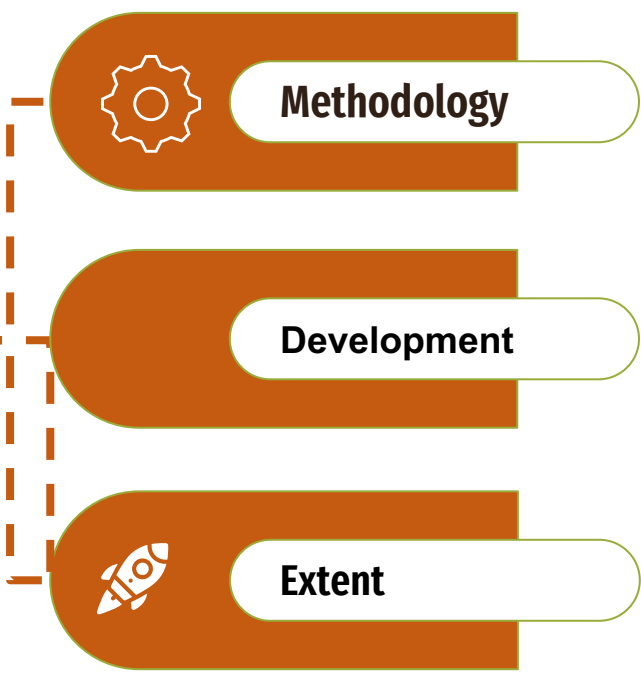

- Crops more prone to diseases
- Plant lodging
- GHG emissions warming the planet

SOILS: WHERE FOOD BEGINS

Food and Agriculture Organization of the United Nations

GLOBAL SOIL PARTNERSHIP

- **Phase I: Digital Soil Mapping** based on a machine learning algorithm (Quantile Regression Forest)
- **Phase II: N, P, K nutrient budgets**
- **Country-driven** (global map based on national submissions)
- Updated following a **Versioning system**
- Scale: **National (Croplands)**
- Depth: **0-30 cm**
- Resolution: **250 x 250 m**

### Mandatory products

- **total N**
- **available P**
- **available K**
- *CEC*
- *pH*
- *clay, silt, and sand*
- *soil organic carbon*
- *bulk density*

GLOBAL SOIL PARTNERSHIP

GSP Members request for GSNmap

**Two-phase initiative**  
**Phase I: Nutrient maps (current status)**  
**Phase II: Nutrient budget maps**

**Methodology**

Definition of a methodology through the support of the GSP's technical networks,

International Network on Soil Information Institutions (INSII),

Working groups and the ITPS

**Technical specifications and country guidelines**

Publication and divulgation to define a standardized approach

**Capacity Building Program**

Online Technical Manual  
 Online regional training & follow-up one to one technical sessions with National Experts

**National Submission**

Quality assessment and quality check of the submitted maps  
 31 August 2023

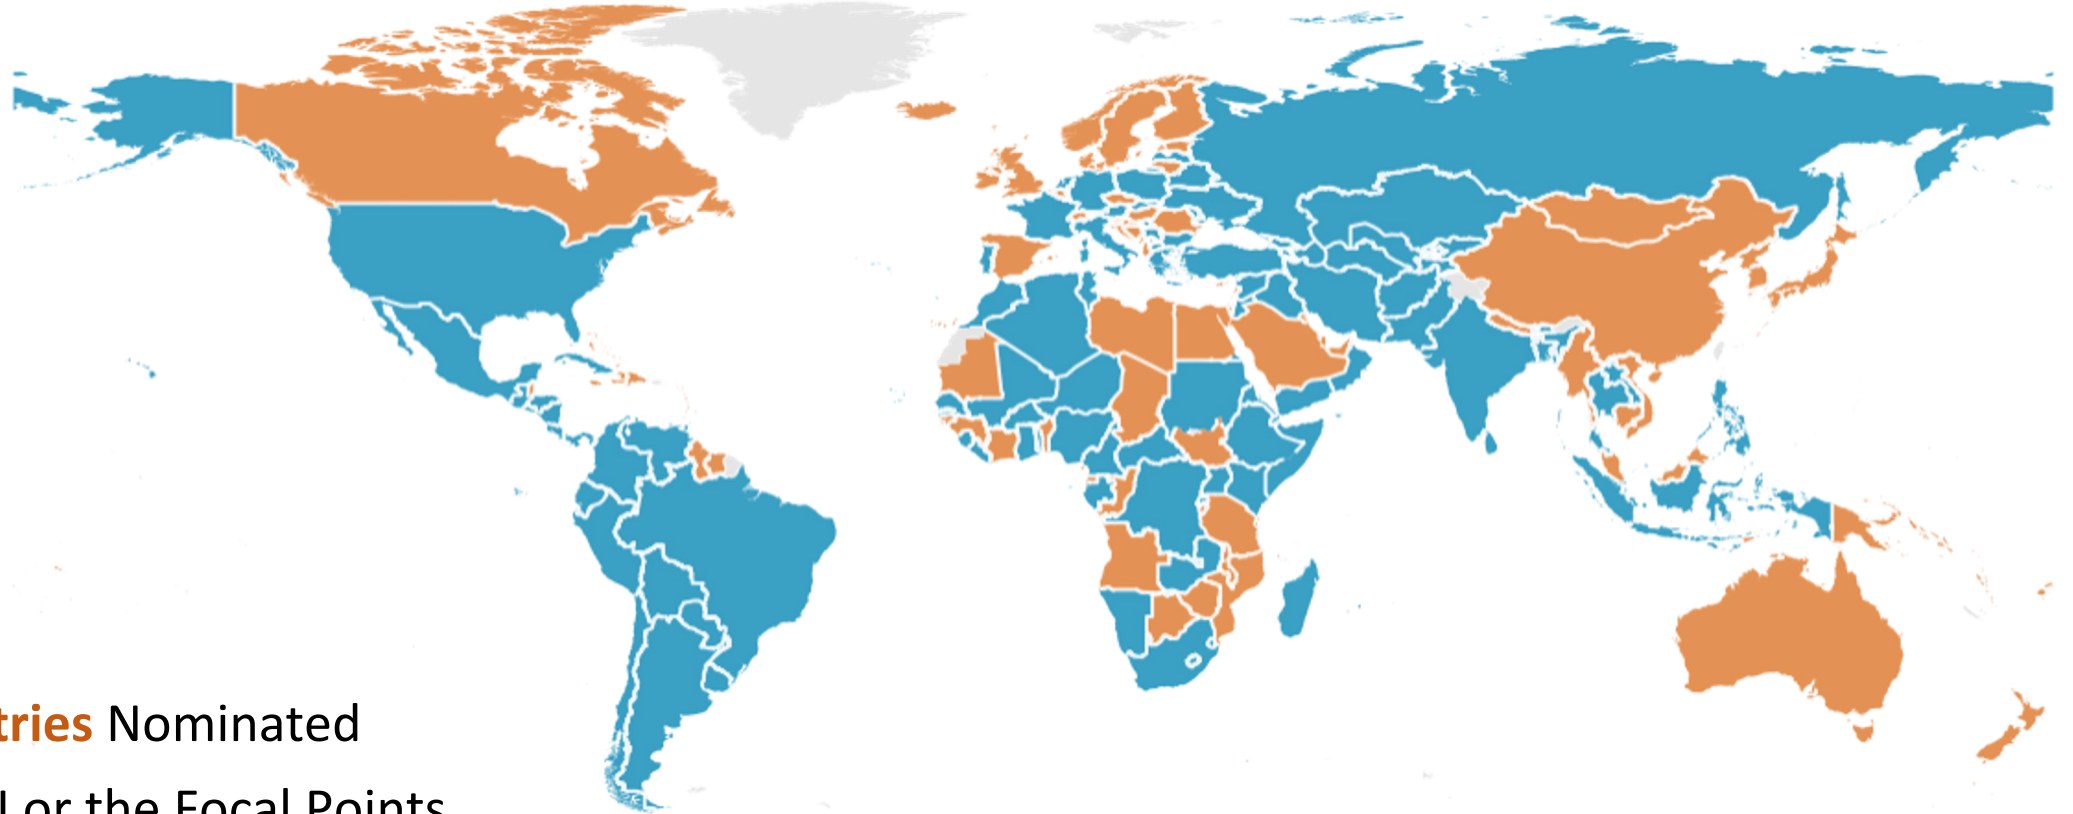

**Insoilfer**  
 International Network on Soil Fertility and Fertilizers

INSOILFER Working Group Meetings | 27-29 November 2023

GLOBAL SOIL PARTNERSHIP

National Expert(s)

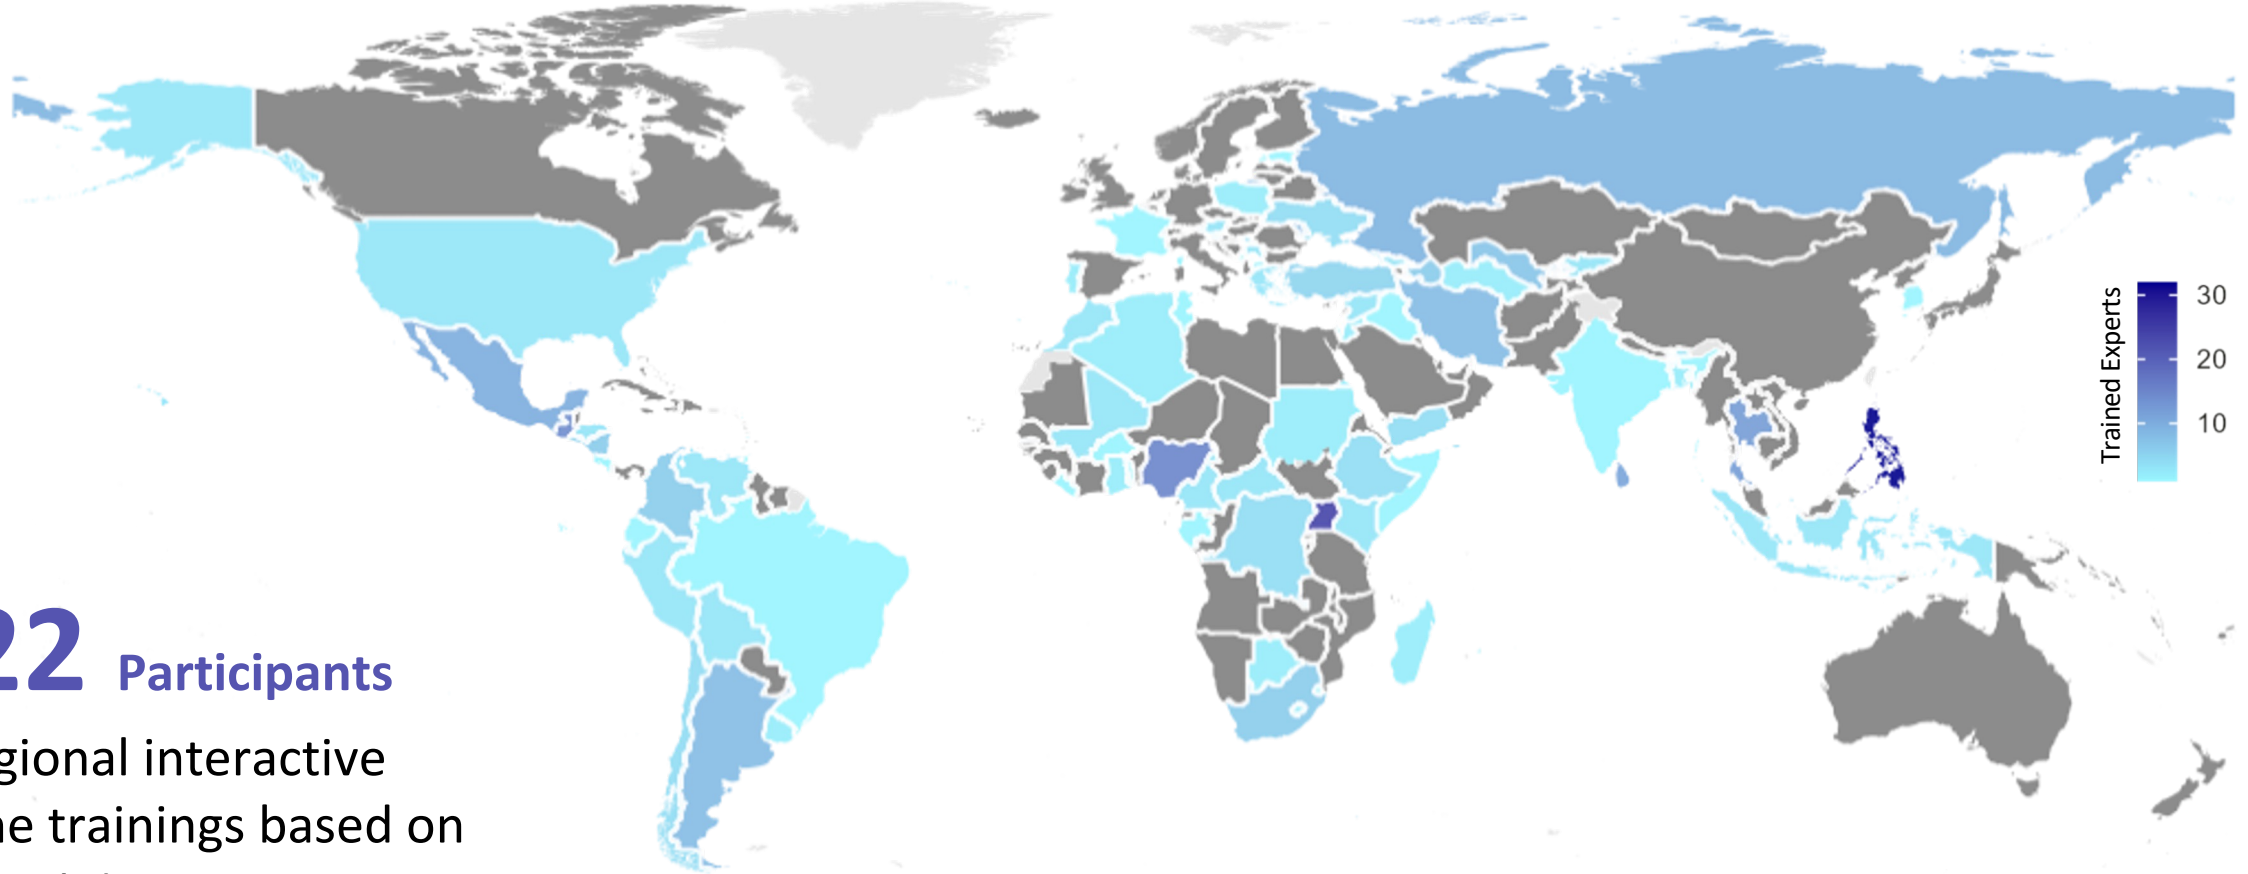

**98 Countries** Nominated

through INSII or the Focal Points one or more national experts to be in charge of the GSNmap exercise.

INSOILFER Working Group Meetings | 27-29 November 2023

# GSNmap Phase I

gap-filling

## GSNmap version 1.0:

**Step 1:** National Submissions (deadline **August 31st, 2023**)

**Step 2:** Countries that did not submit on time.

- **Gap-filling** using a top-down approach with the methodology and covariates described on the Country Guidelines document (GSP-Secretariat).

- Leave the country **blank**.

**Launch:** 12<sup>th</sup> GSP Plenary Assembly 2024 (June)

INSOILFER Working Group Meetings | 27-29 November 2023

Gap-filling is the process of estimating missing or incomplete country data within a raster map.

The selection of the Gap-filling method depends on data characteristics.

Common approaches for gap-filling:

- i. Data Completion
- ii. Interpolation
- iii. Machine Learning Approaches

# Data Completion

Integrating existing raster data products to fill gaps in GSNmap.

## PROS

- Fast and straightforward method utilizing already existing maps.

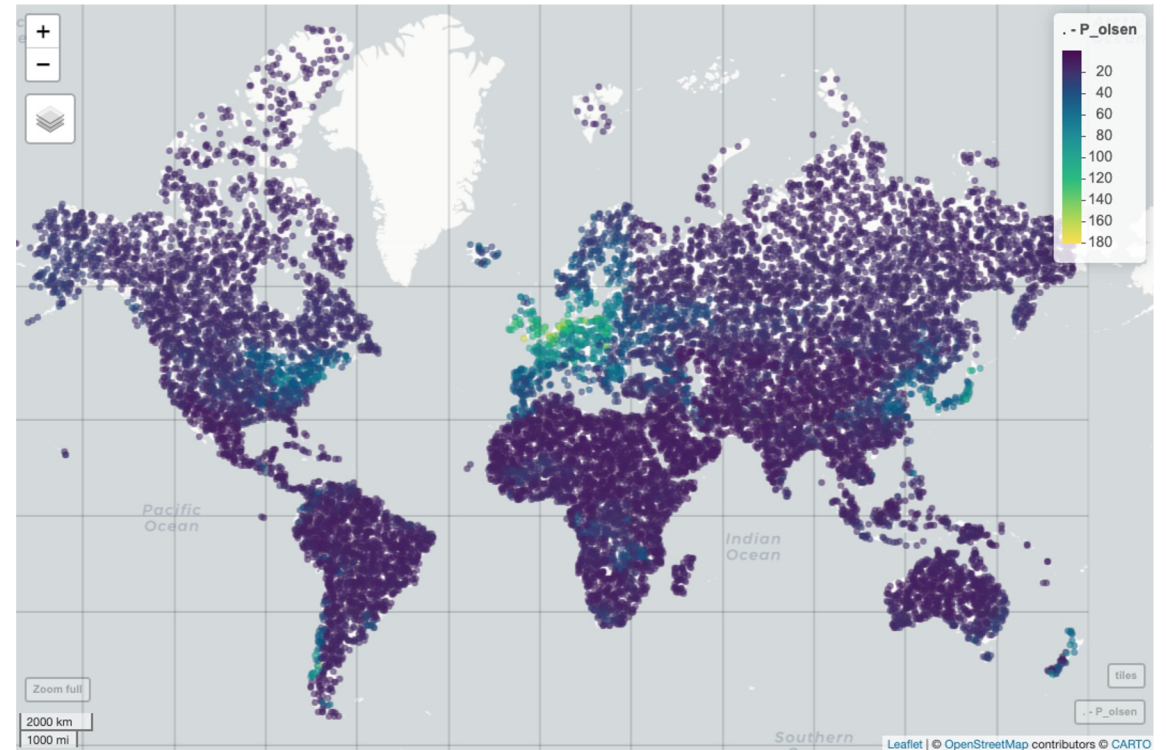

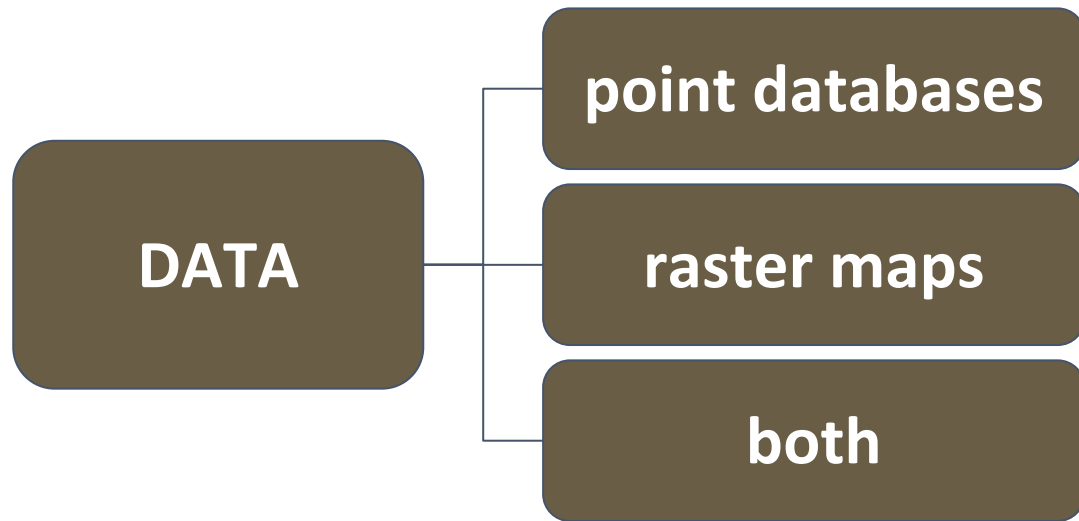

## CONS

- Accuracy.
- Not visually consistent, with noticeable differences among adjacent areas.

# Estimation by Machine Learning

RASTER DATA EXTRACTION : Random sampling within tiles. In this case, we extracted 1000 point values randomly at tiles of 30 degrees from the raster predictions of Olsen phosphorus from McDowell et al. (2023).

# INSOILFER Working Group Meetings

## GSNmap - Phase II Mapping Nutrient Budgets

27-29  
November  
2023

**Insoilfer**  
International Network on  
Soil Fertility and Fertilizers

## Rationale

- Data from **nutrient dynamics** on a global scale, is aggregated at **national scale** and on a **yearly basis** (FAOSTAT, IFA, IFRI ).
- This data lacks the **detail** to reflect **subnational spatial variations** and the actual status of soil nutrients.

# Objective

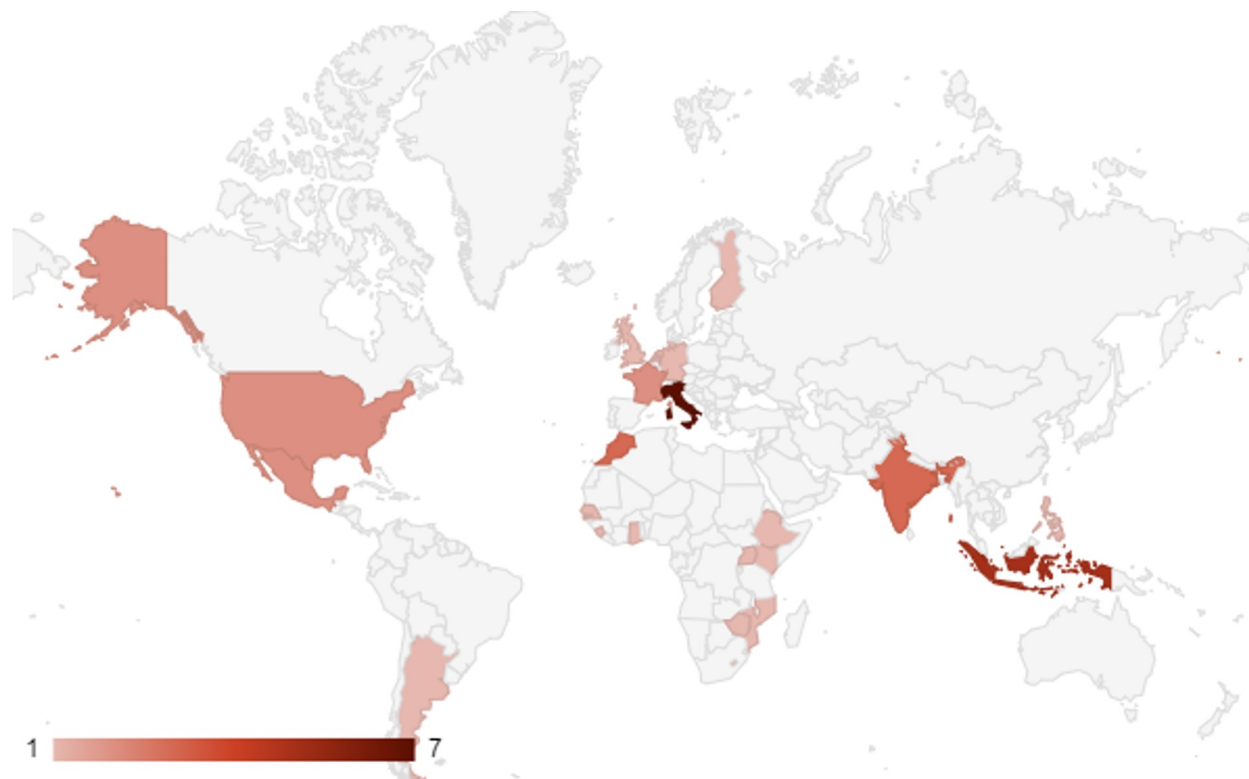

- Improve the global soil nutrient budgets by incorporating assessments of soil nutrient stocks and the impact of erosion and leaching under a country-driven approach.

## 24 Experts on Soil Nutrition

2 Meetings for discussing methodologies to produce national maps, get insight and recommendations

# GSNmap Phase II

GSNmap Working Group

## Agenda

- |  |               |
|--|---------------|
| 1. Opening and Tour de Table                               | 14:00 - 14:15 |
| 2. GSNmap: Progress and challenges (15 min)                | 14:15 - 14:30 |
| 3. GSNmap Phase I: top-down gap-filling strategy (15 min)  | 14:30 - 14:45 |
| Q&A  | 14:45 - 15:00 |
| 4. GSNmap Phase II: mapping soil nutrient budgets (30 min) | 15:00 - 15:30 |
| <i>Open discussion</i>                                     | 15:30 - 16:00 |

### INSOILFER Working Group Meetings | 27-29 November 2023

# GSNmap Phase II

## Output: Nitrogen Leaching

Input/Output	Tier One (Default Datasets)	Tier Two (National Datasets)
Nitrogen Leaching (NL)	Braakhekke et al., 2017. Nitrogen leaching from natural ecosystems under global change	Lesschen et al., 2007

$$L_N (\text{kg N/ha/year}) = 0.0463 + 0.0037 * (P / (C - L)) * (FN + D - NOM - U)$$

$$L_K (\text{kg K/ha/year}) = 6.87 + 0.0117 * P + 0.173 * FK - 0.265 * CEC$$

where:

- $L_N$  and  $L_K$  = N leaching and K leaching, respectively
- $P$  = precipitation (mm/year)
- $C$  = clay (%)
- $L$  = layer thickness (m) [rooting depth]
- $FN$  = mineral and organic fertilizer nitrogen (kg N/ha/year)
- $D$  = decomposition rate of organic matter (1.6% per year)
- $NOM$  = amount of nitrogen in soil organic matter (kg N/ha)
- $U$  = uptake by crop (kg N/ha/year)
- $FK$  = mineral and organic fertilizer potassium (kg K/ha/year)
- $CEC$  = cation exchange capacity (cmol/kg)

<https://esd.copernicus.org/articles/8/1121/2017/esd-8-1121-2017.pdf>

<https://easy.dans.knaw.nl/ui/datasets/id/easy-dataset:75687>

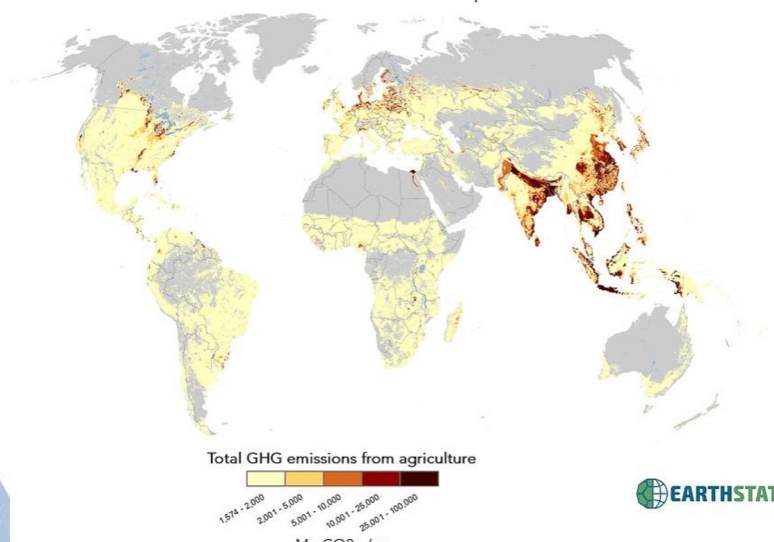

# GSNmap Phase II

## Output: Nitrogen Loss

Input/Output	Tier One (Default Datasets)	Tier Two (National Datasets)
<b>Nitrogen Loss (denitrification + volatilization) (NLO)</b>	Carlson et al. 2016. Greenhouse gas emissions intensity of global croplands (EarthSTAT)	$NLO (Kg N ha yr^{-1}) = 0.025 + 0.000855 P (mm) + 0.13 F (inputs\ mineral + organic\ kg\ N\ ha\ yr) + 0.117 SOC (\%) (Lesschen\ et\ al.,\ 2007)$

Greenhouse Gas Emissions on Croplands

<http://www.earthstat.org/greenhouse-gas-emissions-croplands/>

INSOILFER Working Group Meetings | 27-29 November 2023

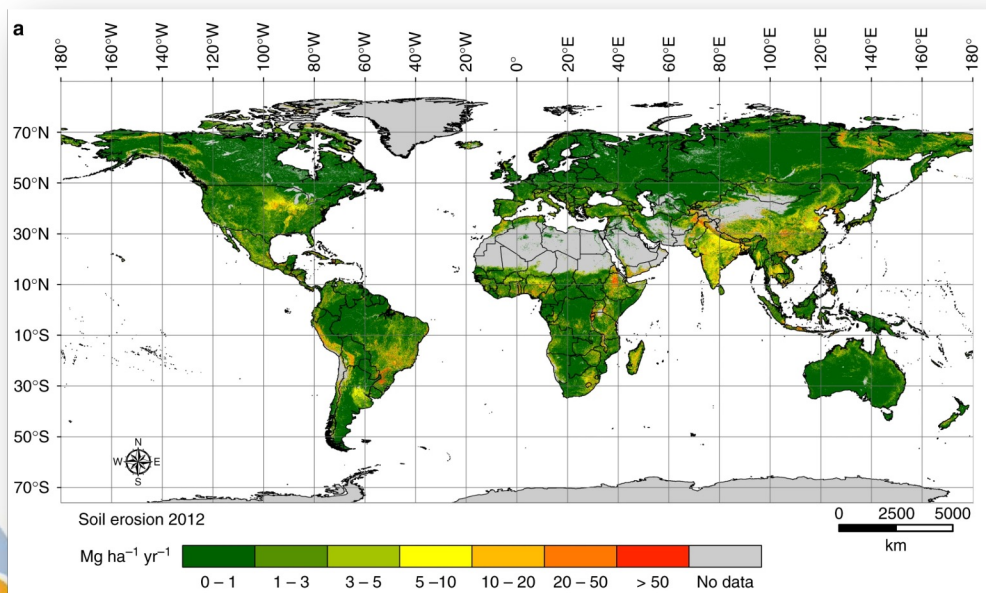

# GSNmap Phase II

Output: Erosion

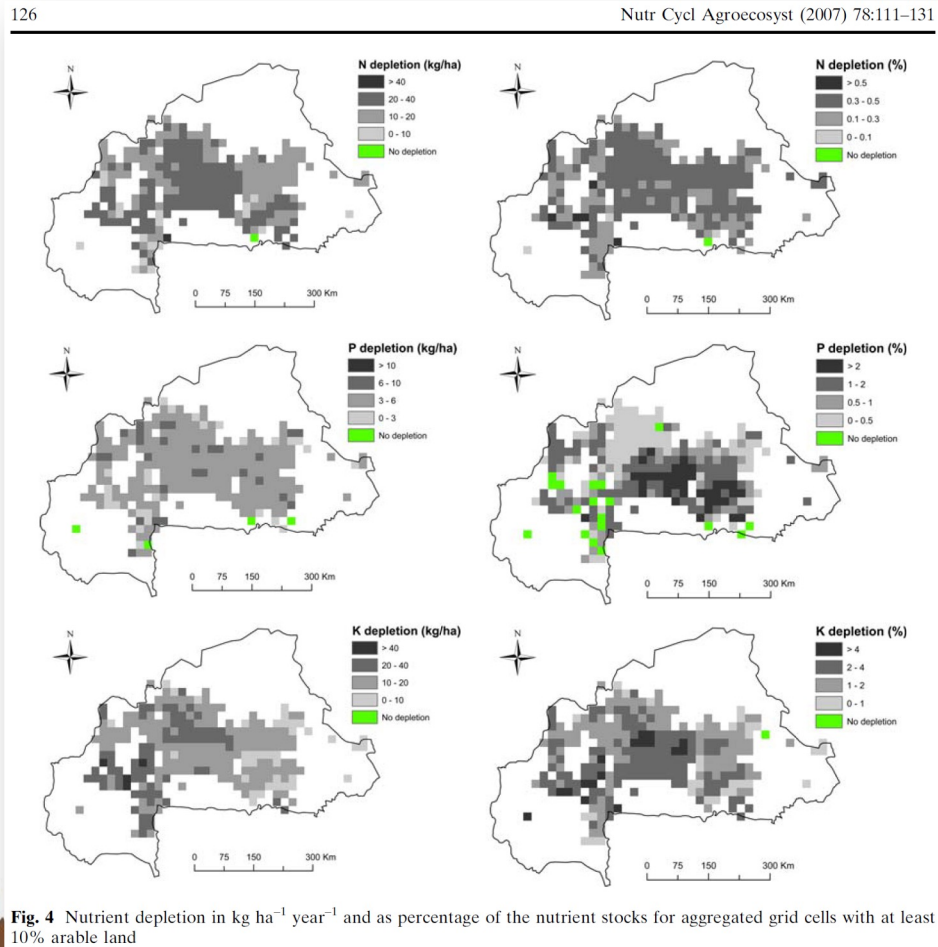

Input/Output	Tier One (Default Datasets)	Tier Two (National Datasets)
Erosion (ER)	Borrelli et al 2017. JSR Global Soil Erosion	National Soil Erosion Map

Soil nutrient stock from Phase I

<https://esdac.jrc.ec.europa.eu/content/global-soil-erosion#tabs-0-description=0>

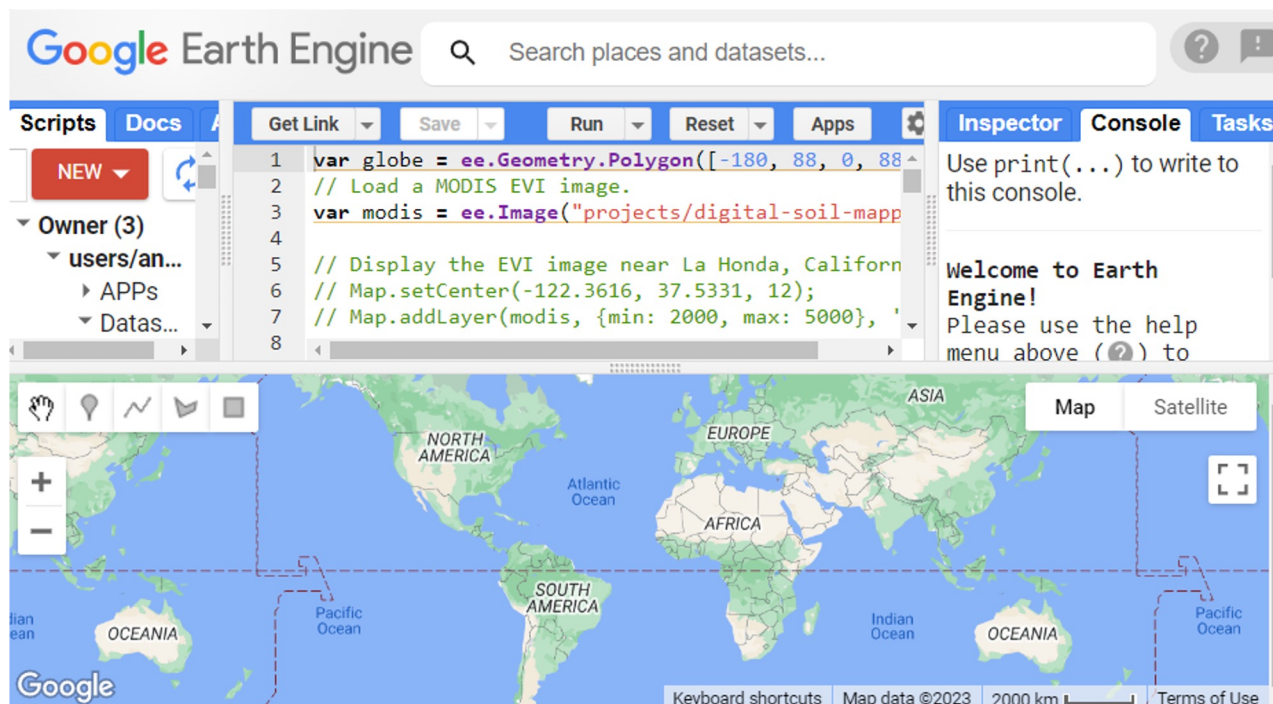

## Expected Results

- Nutrient stocks estimated during Phase I might be included as an input factor to estimate nutrient loss by soil erosion, and to the ratio between nutrient depletion with regard to nutrient stock
- While this will only be a (static) picture, not on a yearly basis, it can be taken as a baseline to measure the risk of soil degradation

# GSNmap Phase II

## Implementation Plan

- GEE script with global defaults and GSNmap layers from Phase I (Tier 1)
- Countries can upload assets (layers) for the other global parameters if available at national level (Tier 2)
- A country could request to be blank in the final map, to submit all standard layers (Tier 1), or to improve the estimation of any of the input layers (Tier 2).

## GSNmap Phase II

Follow-Up

- 1 Technical specifications and country guidelines to be finalised and sent to INSII on the first half 2024.
- 2 INSII will review and approve it.
- 3 Kick-off second phase during the second half 2024.

**Luca Montanarella**  
*INSII Chairperson*

Food and Agriculture
