### **MALTITOL**

Prepared at the 46th JECFA (1996), published in FNP 52 Add 4 (1996) superseding specifications prepared at the 33rd JECFA (1988), published in FNP 38 (1988) and in FNP 52 (1992). Metals and arsenic specifications were revised by JECFA in 2006. An ADI 'not specified' was established at the 41st JECFA (1993).

**SYNONYMS** D-Maltitol, hydrogenated maltose, INS No. 965(i)

**DEFINITION** 

Chemical names alpha-D-Glucopyranosyl-1,4-D-glucitol

C.A.S. number 585-88-6

Chemical formula  $C_{12}H_{24}O_{11}$ 

Structural formula

Formula weight 344.31

Assay Not less than 98.0%

**DESCRIPTION** White crystalline powder

FUNCTIONAL USES Sweetener, humectant, stabilizer, bulking agent

**CHARACTERISTICS** 

**IDENTIFICATION** 

Solubility (Vol. 4) Very soluble in water, slightly soluble in ethanol

Melting range (Vol. 4) 148 - 151°

Thin layer chromatography Passes test

(Vol. 4) Proceed as directed under *Thin Layer Chromatography of Polyols* 

Use the following:

Standard solution

Dissolve 50 mg of reference standard maltitol (available from US

Pharmacopeial Convention, Inc. 12601 Twinbrook Parkway, Rockville, MD

20852, USA) in 20 ml water

Test solution

Dissolve 50 mg of the sample in 20 ml of water

**PURITY** 

Water (Vol. 4) Not more than 1.0% (Karl Fischer Method)

Specific rotation (Vol. 4) [alpha] 20, D: Between +105.5 and +108.5°(5% w/v solution)

Sulfated ash (Vol. 4) Not more than 0.1%

Test 2 g of sample (Method I)

<u>Chlorides</u> (Vol. 4) Not more than 50 mg/kg

Test 10 g of sample by the Limit Test using 1.5 ml of 0.01N hydrochloric

acid in the control

Sulfates (Vol. 4) Not more than 100 mg/kg

Test 10 g of sample by the Limit Test using 2.0 ml of 0.01N sulfuric acid in

the control

Nickel (Vol. 4) Not more than 2 mg/kg

Proceed as directed under Nickel in Polyols

Reducing sugars (Vol. 4) Not more than 0.1%

Proceed as directed under Reducing Substances (as glucose), Method II.

The weight of cuprous oxide shall not exceed 20 mg

<u>Lead</u> (Vol. 4) Not more than 1 mg/kg

Determine using an atomic absorption technique appropriate to the specified level. The selection of sample size and method of sample preparation may be based on the principles of the method described in

Volume 4, "Instrumental Methods."

METHOD OF ASSAY

Determine the maltitol content of the sample using *liquid chromatography* 

(see Volume 4)

Apparatus

Liquid chromatograph (HPLC)

Detection: Differential refractometer maintained at constant temperature

Integrator recorder

Column: AMINEX HPX 87 C (or equivalent resin in calcium form), length

30 cm, internal diameter 9 mm

Eluent: Double distilled degassed water (filtered through Millipore

membrane filter 0.45 μm) Chromatographic conditions

Column temperature: 85 ± 0.5°; Eluent flow rate: 0.5 ml/min

## Standard preparation

Dissolve an accurately weighed quantity of standard reference maltitol in water to obtain a solution having known concentration of about 10.0 mg of maltitol per ml.

# Sample preparation

Transfer about 1 g of the sample accurately weighed to a 50 ml volumetric flask, dilute with water to volume and mix.

### Procedure

Separately inject equal volumes (about 20  $\mu$ I) of the sample preparation and the standard preparation into the chromatograph. Record the chromatograms and measure the responses of the maltitol peak. Calculate the quantity, in mg, of maltitol in the portion of sample taken by the following formula:

$$50 \times C \times \frac{R_U}{Rs}$$

#### where

C = the concentration, in mg per ml, of maltitol in the standard preparation  $R_U$  = the peak response of the sample preparation

 $R_S$  = the peak response of the standard preparation
