

**Ms. Nadine Brisson**

Nadine Brisson is an expert in developing tools and benchmarks to analyze the vulnerability of agricultural systems to climate change. She is a director of research at INRA and has been at the head of the Agroclim Unit of INRA in Avignon.

She is also part of the Agricultural Model Intercomparison Project team (AgMIP), which, gathering different research groups around the world, aims at building climate-scenario simulation of agricultural production in future climate change conditions to reduce risk of hunger and increase food security by adapting capacity in both developed and developing countries. Within the AgMIP, she leads the group for modelling the responses of maize crop in different regions and under different factors and management inputs..
