ISSCFV

- New draft codes developed following to the CWP-19 to 21 agreements with minor modifications for final confirmation from Members
- Concerns:
 - Many crossing across categories
 - Cares to users of the current ISSCFV
 - Simplification of codes: Really needed? Cause any problems?

UN/LOCODE

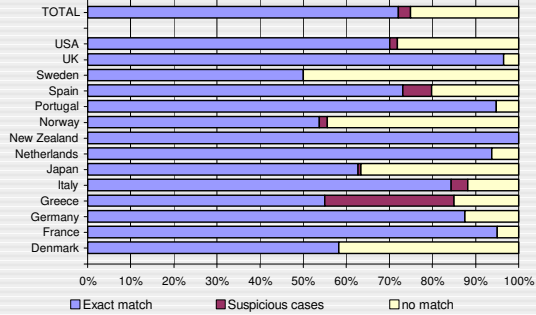

- Developed as a framework of trade facilitation efforts, and covers locations used for goods movement.
- No implication of any opinions whatsoever on the part of UN Secretariat.
- Dynamic system, e.g. 179 rec modified and 931 rec newly added for total 45,111 rec. with independent review and Evaluation system.

FORMAT: ES PMI
national code + location code

UN/LOCODE additional information

- Administrative division (state/province etc): 45.5%
- Exact coordinates of locations : 41.6%
- Level of approval (14 categories) :
 - Approved by authorities or else : 37.5 %
 - Confirmed locations: 42.1 %
- Function (port/airport/rail terminal/road terminal/postal exchanges) : ports - 22.1%

UN/LOCODE - Examination against HSVAR ports

UN/LOCODE - Summary conclusion

- Results of initial examination are quite satisfactory.
- However, need substantial adjustment to meet fishery related requirements:
 - Inclusions of many locations not necessarily associated with trade/good movements
 - Good coverage on trade associated sites has another advantage.
