

THE EAF-NANSEN PROJECT

Assisting developing countries to implement an ecosystem approach to fisheries

The EAF-Nansen project offers an opportunity for coastal countries in sub-Saharan Africa to receive support from FAO for the **implementation of an ecosystem approach to fisheries (EAF) management**. The project assists participating countries to develop national and regional frameworks for EAF, and acquire additional knowledge on their marine ecosystems for use in planning and monitoring. It focuses on:

- Putting in place policies and processes for the sustainable management of fisheries.
- Building the capacity of countries to manage fisheries using the ecosystem approach.
- Undertaking ecosystem assessment and monitoring for the improved management of fisheries.
- Encouraging stakeholder participation in the fisheries management process.
- Increasing awareness of the benefits of an EAF for sustainable fisheries management.
