

Miran Aprahamian is a Technical Advisor with the Environment Agency in the U.K.. Miran gained a BSc in Marine Biology & Zoology at Bangor University (North Wales) and a PhD in fish biology from Liverpool University in 1976 and 1982, respectively. He is a Fellow of the Institute of Fisheries management, a Chartered Environmentalist and a Council member of the Fisheries Society of the British Isles. Miran has been involved with the joint EIFAAC / ICES eel working group and has been / is a member of a number of ICES working groups.

Miran provides, technical expertise on fisheries science and its application to stock management, in relation to diadromous fish (eel, salmon, sea trout, shad, lamprey and smelt). He also advises Government policy leads on scientific and strategy matters for these species and translates policy into cost-effective operational activity. His current work areas are; eel to meet the requirement of the EU regulation (1100/2007), sustainable management of flow to support fish & fisheries, salmonid stock assessment and Water Framework Directive fisheries classification. Miran has published 50+ papers and has contributed to 5 book chapters
