ANNEX: SCHEME FOR THE CALCULATIONS OF CONTRIBUTIONS

The modalities for determining the scale of contribution are calculated in accordance with the following formula:

Factors for calculation:

- *A base fee*: equal for every member;
- *A wealth component*: based on GDP per capita; and
- *A production component*: based on the total inland capture fisheries and inland aquaculture production in tonnes.

Weight to be given to each factor (as percentage of total budget):

Base fee:	20 percent
Wealth component:	35 percent
Production component:	45 percent

Measurement of the factors:**Base fee:**

Every member.

Wealth component:

According to the GDP per capita (measured by US\$ as published by the IMF); members falling into five categories: below US\$1 000; between US\$1 000 and US\$3 999; between US\$4 000 and US\$5 999; between US\$6 000 and US\$9 999 and above US\$10 000. The first category is exempt from the wealth component. The second category pays one (1) share; the third pays three (3) shares; the fourth pays five (5) shares; and the fifth pays ten (10) shares.

Production component:

For fisheries and aquaculture production the official data, reported by the national statistic agencies of the members, will be used. An amount equal to forty-five (45 percent) of the administrative budget is divided among members so that each member pays a share of said forty-five percent that is proportional to its share in the total inland capture fisheries and inland aquaculture production in tonnes.
